

JNTUK KAKINADA

Rules & Syllabus for the Bachelor
of Pharmacy (B. Pharm) Course

as approved by
Pharmacy Council of India
New Delhi

[Framed under Regulation 6, 7 & 8 of the Bachelor of
Pharmacy (B. Pharm) course regulations 2014]

CHAPTER- I: REGULATIONS

1. Short Title and Commencement

These regulations shall be called as “The Revised Regulations for the B. Pharm. Degree Program (CBCS) of the Pharmacy Council of India, New Delhi”. They shall come into effect from the Academic Year 2016-17. The regulations framed are subject to modifications from time to time by Pharmacy Council of India.

2. Minimum qualification for admission

2.1 First year B. Pharm:

Candidate shall have passed 10+2 examination conducted by the respective state/central government authorities recognized as equivalent to 10+2 examination by the Association of Indian Universities (AIU) with English as one of the subjects and Physics, Chemistry, Mathematics (P.C.M) and or Biology (P.C.B / P.C.M.B.) as optional subjects individually. Any other qualification approved by the Pharmacy Council of India as equivalent to any of the above examinations.

2.2. B. Pharm lateral entry (to third semester):

A pass in D. Pharm. course from an institution approved by the Pharmacy Council of India under section 12 of the Pharmacy Act.

3. Duration of the program

The course of study for B.Pharm shall extend over a period of eight semesters (four academic years) and six semesters (three academic years) for lateral entry students. The curricula and syllabi for the program shall be prescribed from time to time by Pharmacy Council of India, New Delhi.

4. Medium of instruction and examinations

Medium of instruction and examination shall be in English.

5. Working days in each semester

Each semestershall consist of not less than 100 working days. The odd semesters shall be conducted from the month of June/July to November/December and the even semesters shall be conducted from December/January to May/June in every calendar year.

6. Attendance and progress

A candidate is required to put in at least 80% attendance in individual courses considering theory and practical separately. The candidate shall complete the prescribed course satisfactorily to be eligible to appear for the respective examinations.

7. Program/Course credit structure

As per the philosophy of Credit Based Semester System, certain quantum of academic work viz. theory classes, tutorial hours, practical classes, etc. are measured in terms of credits. On satisfactory completion of the courses, a candidate earns credits. The amount of credit associated with a course is dependent upon the number of hours of instruction per week in that course. Similarly, the credit associated with any of the other academic, co/extra-curricular activities is dependent upon the quantum of work expected to be put in for each of these activities per week.

7.1. Credit assignment

7.1.1. Theory and Laboratory courses

Courses are broadly classified as Theory and Practical. Theory courses consist of lecture (L) and /or tutorial (T) hours, and Practical (P) courses consist of hours spent in the laboratory. Credits (C) for a course is dependent on the number of hours of instruction per week in that course, and is obtained by using a multiplier of one (1) for lecture and tutorial hours, and a multiplier of half (1/2) for practical (laboratory) hours. Thus, for example, a theory course having three lectures and one tutorial per week throughout the semester carries a credit of 4. Similarly, a practical having four laboratory hours per week throughout semester carries a credit of 2.

7.2. Minimum credit requirements

The minimum credit points required for award of a B. Pharm. degree is 208. These credits are divided into Theory courses, Tutorials, Practical, Practice School and Project over the duration of eight semesters. The credits are distributed semester-wise as shown in Table IX. Courses generally progress in sequences, building competencies and their positioning indicates certain academic maturity on the part of the learners. Learners are expected to follow the semester-wise schedule of courses given in the syllabus.

The lateral entry students shall get 52 credit points transferred from their D. Pharm program. Such students shall take up additional remedial courses of ‘Communication Skills’ (Theory and Practical) and ‘Computer Applications in Pharmacy’ (Theory and Practical) equivalent to 3 and 4 credit points respectively, a total of 7 credit points to attain 59 credit points, the maximum of I and II semesters.

8. Academic work

A regular record of attendance both in Theory and Practical shall be maintained by the teaching staff of respective courses.

9. Course of study

The course of study for B. Pharm shall include Semester Wise Theory & Practical as given in Table – I to VIII. The number of hours to be devoted to each theory, tutorial and practical course in any semester shall not be less than that shown in Table – I to VIII.

Table-I: Course of study for semester I

Course code	Name of the course	No. of hours	Tutorial	Credit points
BP101T	Human Anatomy and Physiology I – Theory	3	1	4
BP102T	Pharmaceutical Analysis I – Theory	3	1	4

Total credit points for the program	209/211^{\$}/212[#]

* The credit points assigned for extracurricular and or co-curricular activities shall be given by the Principals of the colleges and the same shall be submitted to the University. The criteria to acquire this credit point shall be defined by the colleges from time to time.

^{\$}Applicable ONLY for the students studied Physics / Chemistry / Botany / Zoology at HSC and appearing for Remedial Mathematics course.

[#]Applicable ONLY for the students studied Mathematics / Physics / Chemistry at HSC and appearing for Remedial Biology course.

10. Program Committee

1. The B. Pharm. program shall have a Program Committee constituted by the Head of the institution in consultation with all the Heads of the departments.
2. The composition of the Program Committee shall be as follows:

A senior teacher shall be the Chairperson; One Teacher from each department handling B.Pharm courses; and four student representatives of the program (one from each academic year), nominated by the Head of the institution.

3. Duties of the Program Committee:

- i. Periodically reviewing the progress of the classes.
- ii. Discussing the problems concerning curriculum, syllabus and the conduct of classes.
- iii. Discussing with the course teachers on the nature and scope of assessment for the course and the same shall be announced to the students at the beginning of respective semesters.
- iv. Communicating its recommendation to the Head of the institution on academic matters.
- v. The Program Committee shall meet at least thrice in a semester preferably at the end of each Sessionalexam (Internal Assessment) and before the end semester exam.

11. Examinations/Assessments

The scheme for internal assessment and end semester examinations is given in Table – X.

11.1. End semester examinations

The End Semester Examinations for each theory and practical coursethrough semesters I to VIII shall be conducted by the university except for the subjects with asterix symbol (*) in table I and II for which examinations shall be conducted by the subject experts at college level and the marks/grades shall be submitted to the university.

Tables-X: Schemes for internal assessments and end semester examinations semester wise

11.2. Internal assessment: Continuous mode

The marks allocated for Continuous mode of Internal Assessment shall be awarded as per the scheme given below.

Table-XI:Scheme for awarding internal assessment: Continuous mode

Theory			
Criteria		Maximum Marks	
Attendance (Refer Table – XII)		4	2
Academic activities (Average of any 3 activities e.g. quiz, assignment, open book test, field work, group discussion and seminar)		3	1.5
Student – Teacher interaction		3	1.5
Total		10	5
Practical			
Attendance (Refer Table – XII)		2	
Based on Practical Records, Regular viva voce, etc.		3	
Total		5	

Table- XII: Guidelines for the allotment of marks for attendance

Percentage of Attendance	Theory	Practical
95 – 100	4	2
90 – 94	3	1.5
85 – 89	2	1
80 – 84	1	0.5
Less than 80	0	0

11.2.1. Sessional Exams

Two Sessional exams shall be conducted for each theory / practical course as per the schedule fixed by the college(s). The scheme of question paper for theory and practical Sessional examinations is given below. The average marks of two Sessional exams shall be computed for internal assessment as per the requirements given in tables – X.

Sessional exam shall be conducted for 30 marks for theory and shall be computed for 15 marks. Similarly Sessional exam for practical shall be conducted for 40 marks and shall be computed for 10 marks.

Question paper pattern for theory Sessional examinations

For subjects having University examination

I. Multiple Choice Questions (MCQs)	=	$10 \times 1 = 10$
OR		OR
Objective Type Questions (5 x 2)	=	$05 \times 2 = 10$
(Answer all the questions)		
I. Long Answers (Answer 1 out of 2)	=	$1 \times 10 = 10$
II. Short Answers (Answer 2 out of 3)	=	$2 \times 5 = 10$

Total	=	30 marks

For subjects having Non University Examination

I. Long Answers (Answer 1 out of 2)	=	$1 \times 10 = 10$
II. Short Answers (Answer 4 out of 6)	=	$4 \times 5 = 20$
	Total	= 30 marks

Question paper pattern for practical sessional examinations

I. Synopsis	=	10
II. Experiments	=	25
III. Viva voce	=	05
	Total	= 40 marks

12. Promotion and award of grades

A student shall be declared PASS and eligible for getting grade in a course of B.Pharm.program if he/she secures at least 50% marks in that particular course including internal assessment. For example, to be declared as PASS and to get grade, the student has to secure a minimum of 50 marks for the total of 100 including continuous mode of assessment and end semester theory examination and has to secure a minimum of 25 marks for the total 50 including internal assessment and end semester practical examination.

13. Carry forward of marks

In case a student fails to secure the minimum 50% in any Theory or Practical course as specified in 12, then he/she shall reappear for the end semester examination of that course. However his/her marks of the Internal Assessments shall be carried over and he/she shall be entitled for grade obtained by him/her on passing.

14. Improvement of internal assessment

A student shall have the opportunity to improve his/her performance only once in the Sessional exam component of the internal assessment. The re-conduct of the Sessional exam shall be completed before the commencement of next end semester theory examinations.

15. Re-examination of end semester examinations

Reexamination of end semester examinations shall be conducted as per the schedule given in table XIII. The exact dates of examinations shall be notified from time to time.

Table-XIII: Tentative schedule of end semester examinations

Semester	For Regular Candidates	For Failed Candidates
I, III, V and VII	November / December	May / June
II, IV, VI and VIII	May / June	November / December

Question paper pattern for end semester theory examinations**For 75 marks paper**

I. Multiple Choice Questions(MCQs)	=	20 x 1 = 20
OR		OR
Objective Type Questions (10 x 2)	=	10 x 2 = 20
(Answer all the questions)		
II. Long Answers (Answer 2 out of 3)	=	2 x 10 = 20
III. Short Answers (Answer 7 out of 9)	=	7 x 5 = 35

Total	=	75 marks

For 50 marks paper

I. Long Answers (Answer 2 out of 3)	=	2 x 10 = 20
II. Short Answers (Answer 6 out of 8)	=	6 x 5 = 30

Total	=	50 marks

For 35 marks paper

I. Long Answers (Answer 1 out of 2)	=	1 x 10 = 10
II. Short Answers (Answer 5 out of 7)	=	5 x 5 = 25

Total	=	35 marks

Question paper pattern for end semester practical examinations

I. Synopsis	=	5
II. Experiments	=	25
III. Viva voce	=	5

Total	=	35 marks

16. Academic Progression:

No student shall be admitted to any examination unless he/she fulfills the norms given in
6. Academic progression rules are applicable as follows:

A student shall be eligible to carry forward all the courses of I, II and III semesters till the IV semester examinations. However, he/she shall not be eligible to attend the courses of V semester until all the courses of I and II semesters are successfully completed.

A student shall be eligible to carry forward all the courses of III, IV and V semesters till the VI semester examinations. However, he/she shall not be eligible to attend the courses of VII semester until all the courses of I, II, III and IV semesters are successfully completed.

A student shall be eligible to carry forward all the courses of V, VI and VII semesters till the VIII semester examinations. However, he/she shall not be eligible to get the course completion certificate until all the courses of I, II, III, IV, V and VI semesters are successfully completed.

A student shall be eligible to get his/her CGPA upon successful completion of the courses of I to VIII semesters within the stipulated time period as per the norms specified in 26.

A lateral entry student shall be eligible to carry forward all the courses of III, IV and V semesters till the VI semester examinations. However, he/she shall not be eligible to attend the courses of VII semester until all the courses of III and IV semesters are successfully completed.

A lateral entry student shall be eligible to carry forward all the courses of V, VI and VII semesters till the VIII semester examinations. However, he/she shall not be eligible to get the course completion certificate until all the courses of III, IV, V and VI semesters are successfully completed.

A lateral entry student shall be eligible to get his/her CGPA upon successful completion of the courses of III to VIII semesters within the stipulated time period as per the norms specified in 26.

Any student who has given more than 4 chances for successful completion of I / III semester courses and more than 3 chances for successful completion of II / IV semester courses shall be permitted to attend V / VII semester classes ONLY during the subsequent academic year as the case may be. In simpler terms there shall NOT be any ODD BATCH for any semester.

Note: Grade AB should be considered as failed and treated as one head for deciding academic progression. Such rules are also applicable for those students who fail to register for examination(s) of any course in any semester.

17. Grading of performances

17.1. Letter grades and grade points allocations:

Based on the performances, each student shall be awarded a final letter grade at the end of the semester for each course. The letter grades and their corresponding grade points are given in Table – XII.

Table – XII: Letter grades and grade points equivalent to Percentage of marks and performances

Percentage of Marks Obtained	Letter Grade	Grade Point	Performance
90.00 – 100	O	10	Outstanding
80.00 – 89.99	A	9	Excellent
70.00 – 79.99	B	8	Good
60.00 – 69.99	C	7	Fair
50.00 – 59.99	D	6	Average
Less than 50	F	0	Fail
Absent	AB	0	Fail

A learner who remains absent for any end semester examination shall be assigned a letter grade of AB and a corresponding grade point of zero. He/she should reappear for the said evaluation/examination in due course.

18. The Semester grade point average (SGPA)

The performance of a student in a semester is indicated by a number called ‘Semester Grade Point Average’ (SGPA). The SGPA is the weighted average of the grade points obtained in all the courses by the student during the semester. For example, if a student takes five courses (Theory/Practical) in a semester with credits C₁, C₂, C₃, C₄ and C₅ and the student’s grade points in these courses are G₁, G₂, G₃, G₄ and G₅, respectively, and then students’ SGPA is equal to:

$$\text{SGPA} = \frac{\text{C}_1\text{G}_1 + \text{C}_2\text{G}_2 + \text{C}_3\text{G}_3 + \text{C}_4\text{G}_4 + \text{C}_5\text{G}_5}{\text{C}_1 + \text{C}_2 + \text{C}_3 + \text{C}_4 + \text{C}_5}$$

The SGPA is calculated to two decimal points. It should be noted that, the SGPA for any semester shall take into consideration the F and ABS grade awarded in that semester. For example if a learner has a F or ABS grade in course 4, the SGPA shall then be computed as:

$$\text{C}_1\text{G}_1 + \text{C}_2\text{G}_2 + \text{C}_3\text{G}_3 + \text{C}_4^* \text{ ZERO} + \text{C}_5\text{G}_5$$

$$\text{SGPA} = \frac{\text{C}_1\text{G}_1 + \text{C}_2\text{G}_2 + \text{C}_3\text{G}_3 + \text{C}_4^* \text{ ZERO} + \text{C}_5\text{G}_5}{\text{C}_1 + \text{C}_2 + \text{C}_3 + \text{C}_4 + \text{C}_5}$$

19. Cumulative Grade Point Average (CGPA)

The CGPA is calculated with the SGPA of all the VIII semesters to two decimal points and is indicated in final grade report card/final transcript showing the grades of all VIII semesters and their courses. The CGPA shall reflect the failed status in case of F grade(s), till the course(s) is/are passed. When the course(s) is/are passed by obtaining a pass grade on subsequent examination(s) the CGPA shall only reflect the new grade and not the fail grades earned earlier. The CGPA is calculated as:

$$\text{CGPA} = \frac{\text{C}_1\text{S}_1 + \text{C}_2\text{S}_2 + \text{C}_3\text{S}_3 + \text{C}_4\text{S}_4 + \text{C}_5\text{S}_5 + \text{C}_6\text{S}_6 + \text{C}_7\text{S}_7 + \text{C}_8\text{S}_8}{\text{C}_1 + \text{C}_2 + \text{C}_3 + \text{C}_4 + \text{C}_5 + \text{C}_6 + \text{C}_7 + \text{C}_8}$$

where $\text{C}_1, \text{C}_2, \text{C}_3, \dots$ is the total number of credits for semester I, II, III, ... and $\text{S}_1, \text{S}_2, \text{S}_3, \dots$ is the SGPA of semester I, II, III,

20. Declaration of class

The class shall be awarded on the basis of CGPA as follows:

First Class with Distinction	= CGPA of 7.50 and above
First Class	= CGPA of 6.00 to 7.49
Second Class	= CGPA of 5.00 to 5.99

21. Project work

All the students shall undertake a project under the supervision of a teacher and submit a report. The area of the project shall directly relate any one of the elective subject opted by the student in semester VIII. The project shall be carried out in group not exceeding 5 in number. The project report shall be submitted in triplicate (typed & bound copy not less than 25 pages).

The internal and external examiner appointed by the University shall evaluate the project at the time of the Practical examinations of other semester(s). Students shall be evaluated in groups for four hours (i.e., about half an hour for a group of five students). The projects shall be evaluated as per the criteria given below.

Evaluation of Dissertation Book:

Objective(s) of the work done	15 Marks
Methodology adopted	20 Marks
Results and Discussions	20 Marks
Conclusions and Outcomes	20 Marks
Total	75 Marks

Evaluation of Presentation:

Presentation of work	25 Marks
Communication skills	20 Marks
Question and answer skills	30 Marks
Total	75 Marks

Explanation: The 75 marks assigned to the dissertation book shall be same for all the students in a group. However, the 75 marks assigned for presentation shall be awarded based on the performance of individual students in the given criteria.

22. Industrial training (Desirable)

Every candidate shall be required to work for at least 150 hours spread over four weeks in a Pharmaceutical Industry/Hospital. It includes Production unit, Quality Control department, Quality Assurance department, Analytical laboratory, Chemical manufacturing unit, Pharmaceutical R&D, Hospital (Clinical Pharmacy), Clinical Research Organization, Community Pharmacy, etc. After the Semester – VI and before the commencement of Semester – VII, and shall submit satisfactory report of such work and certificate duly signed by the authority of training organization to the head of the institute.

23. Practice School

In the VII semester, every candidate shall undergo practice school for a period of 150 hours evenly distributed throughout the semester. The student shall opt any one of the domains for practice school declared by the program committee from time to time.

At the end of the practice school, every student shall submit a printed report (in triplicate) on the practice school he/she attended (not more than 25 pages). Along with the exams of semester VII, the report submitted by the student, knowledge and skills acquired by the student through practice school shall be evaluated by the subject experts at college level and grade point shall be awarded.

24. Award of Ranks

Ranks and Medals shall be awarded on the basis of final CGPA. However, candidates who fail in one or more courses during the B.Pharm program shall not be eligible for award of ranks. Moreover, the candidates should have completed the B. Pharm program in minimum prescribed number of years, (four years) for the award of Ranks.

25. Award of degree

Candidates who fulfill the requirements mentioned above shall be eligible for award of degree during the ensuing convocation.

26. Duration for completion of the program of study

The duration for the completion of the program shall be fixed as double the actual duration of the program and the students have to pass within the said period, otherwise they have to get fresh Registration.

27. Re-admission after break of study

Candidate who seeks re-admission to the program after break of study has to get the approval from the university by paying a condonation fee.

No condonation is allowed for the candidate who has more than 2 years of break up period and he/she has to rejoin the program by paying the required fees.

**INSTITUTIONAL EXAMINATION
COMMITTEE**

VIJAYA INSTITUTE OF PHARMACEUTICAL SCIENCES FOR WOMEN
ENIKEPADU, VIJAYAWADA

INSTITUTIONAL EXAMINATION COMMITTEE 2020-21

Date:02-11-20

ROLES & RESPONSIBILITIES:

- Ensure proper dissemination of information with regard to examination among all the stakeholders' viz. students / faculty / non – teaching staff / university authorities etc.
- To receive exam notification / schedule from JNTUK web portal.
- To ensure proper organization of internal assessments / sessional / end semester examinations in the college.
- Ensure proper communication with JNTUK with regards to examination and fulfillment of university circulars.
- To communicate with the faculty regarding the setting of question paper and the other requisites that go along with it.
- To ensure proper seating plan and invigilation duties.
- Appoint alternative internal examiners / external examiners for conduct of end semester theory/ practical examination with permission of university authorities.
- Record and issue the answer books and other exam related stationery to the invigilators / internal examiners 30 minutes before the commencement of the exam
- Download and print the appropriate number of question papers at least 20 minutes before the commencement of the exam and maintain absolute confidentiality
- To have an internal squad committee to ensure the smooth conduct of examinations and also to avoid issues of malpractices.
- Resolve students / faculty / university grievances with regards to examinations.
- Uploading internal theory / practical examination marks on JNTUK web portal.
- Maintain records with regards to conduct of examination and results.

MEETING SCHEDULE:

The committee members meet twice in the academic year.

CONSTITUTION: The details of the members are as follow:

S. No	Name of the Faculty	Designation	Post
1	Dr. K. Padmalatha	Professor & Principal	Chairperson <i>(Signature)</i>
2	Mr. S. Venkateswara Rao	Associate Professor	College Examination Officer <i>(Signature)</i>

SESSIONAL BOOK

Name : R. MENAKA DEVI
Class : III - B. PHARMACY - B SECTION
Roll No. : 187NIR0065
Subject : PHARMACEUTICAL BIOTECHNOLOGY

Internal	Objective	Subjective	Assignment	Total	Staff Sign	Student Sign
I	10	19	-	29	<i>ok</i>	R. Menaka Devi
II	10	18	-	28	<i>ok</i>	R. Menaka Devi

Final Average :

Staff Sign

HOD Sign

Time: 15 min

Sub: PHARMACEUTICAL BIOTECHNOLOGY(BP605T)

Marks: 10
10 x 1=10 Marks

Multiple choice questions

1. Where the maturation of T-Lymphocytes takes place
 a) Thyroid b) Bone marrow c) Thymus d) Tonsils (c) ✓
2. During the enzymatic reaction of an immobilized enzyme, the rate of substrate transfer is
 a) Equal to that of substrate consumption b) More than that of substrate consumption (a) ✓
 c) Lesser than that of substrate consumption d) Nothing to do with the substrate consumption
3. The immobilized enzyme produced by micro encapsulation technique provides (a)
 a) An extremely large surface area b) Smaller surface area
 c) High amount of solvent d) Relatively smaller surface area
4. Name of the microorganism produces penicillinase enzyme is
 a) *E. coli* b) *Staphylococcus aureus* (b) ✓
 c) *Bacillus subtilis* d) *Pseudomonas aureus*
5. Skin is considered as
 a) Active Immunity b) Passive immunity c) Innate Immunity d) Acquired Immunity (c) ✓
6. Name of the enzyme present in sweat is
 a) Amylase b) Penicillinase c) Protease d) Lysozyme (d) ✓
7. What are the examples of secondary lymphoid organs
 a) Spleen b) Tonsils
 c) Lymph nodes d) All of the above (d) ✓
8. Ig present in saliva, tears, & sweat is
 a) Ig A b) Ig D c) Ig E d) Ig G (a) ✓
9. BCG vaccine is act against
 a) *Mycobacterium leprae* b) *Mycobacterium tuberculosis*
 c) Malaria d) Jaundice (b) ✓
10. The support material for immobilization of cells of *Bacillus subtilis* is
 a) Ion exchange resins b) Gelatin
 c) Anthracite d) Agarose (d) ✓

I. MID EXAMINATION.

I.2

INSULIN & INTERFERON.

INSULIN

- It is a hormone which is produced by the β -cells of Islets of Langerhans in the Pancreas.
- It has 51 amino acids which are linked together with polypeptide bonds.
- Insulin has 2 chains A & B. On which A chain has 21 amino acids and B-chain has 30 amino acids, which are held together by disulfide bonds.

Production of Insulin:

Insulin can be produced recombinantly through the insertion of human gene insulin and promoter gene of the lac Operon into the cultured E. coli. Ofcourse, the recombinant human insulin came well and insulin is the 1st recombinant product.

- ~~1971~~, On 1980, July, 17, Volunteers were administered the recombinant human insulin to treat the Diabetes Mellitus.

Diabetes Mellitus:

- It is a metabolic disorder, in which the Glucose level in the blood rises high due to insufficiency of the hormone Insulin Biologically.
- Hence External administration of insulin results in treating Diabetes Mellitus.

Production of Insulin in an effective way:

After the administration of Insulin to human volunteers, the recombinant human insulin was successful. By that Eli Lilly Company marketed the first recombinant insulin as ~~not~~ "Humulin".

- For the necessity of recombinant human insulin, it is produced by addition of signal peptides, two chains produced separately in separate E. coli cultures and then added to a single hormone.
- It makes the production easier and faster.

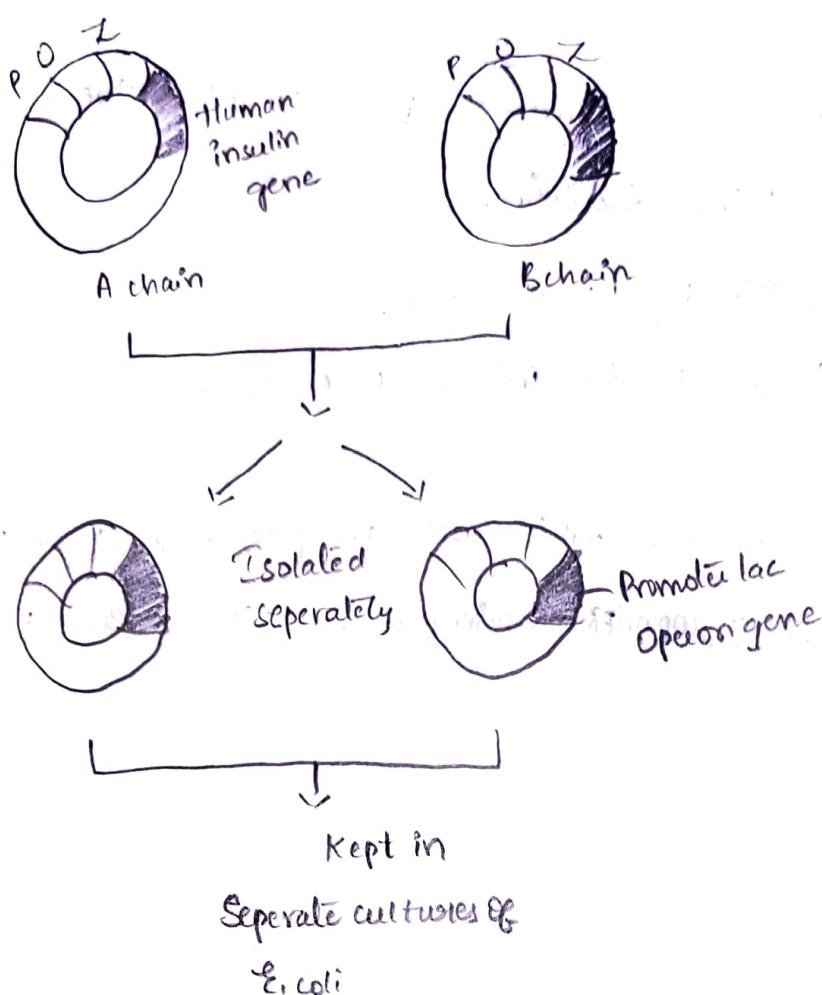

Second Generation recombinant human Insulin:

- The 1st produced insulin rises in the plasma levels and leads to hyperinsulinemia due to the slow dissociated hexamer into monomer or dimer.
- Hence, the Insulin Pro was discovered with slight differences in 29 and 30 amino acids of B-chain resulting in the faster dissociation of insulin.

Porcine

It is the recombinant pig insulin, which is differed from human insulin in just one amino acid - alanine in place of threonine.

- Although it is used to treat Diabetes Mellitus and used extensively.

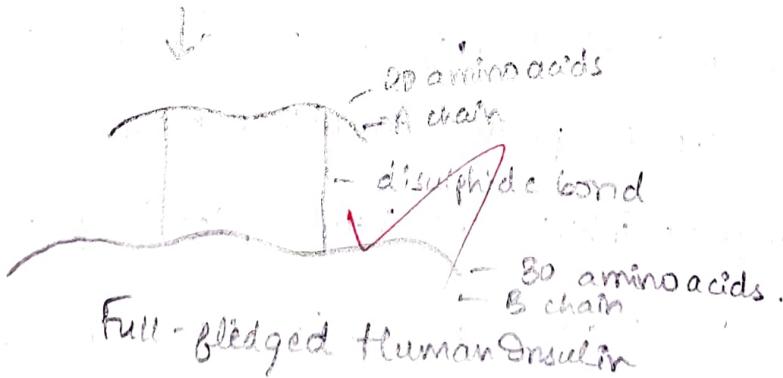

Lactose is added
to enhance chain
formation

A chain + B chain

Added lactose

Production of Human Insulin

INTERFERON

These are first line defence molecules produced when the host organism undergoes Viral infections.

- These are first identified by Isaacs & Jean.
- Interferon name is due to the Interference of molecules in Viral Replication.
- These are single substances which are group of more than 20 substances, made up of glycoproteins having mol. wt 20000 - 30000 Daltons.

Types of Interferons

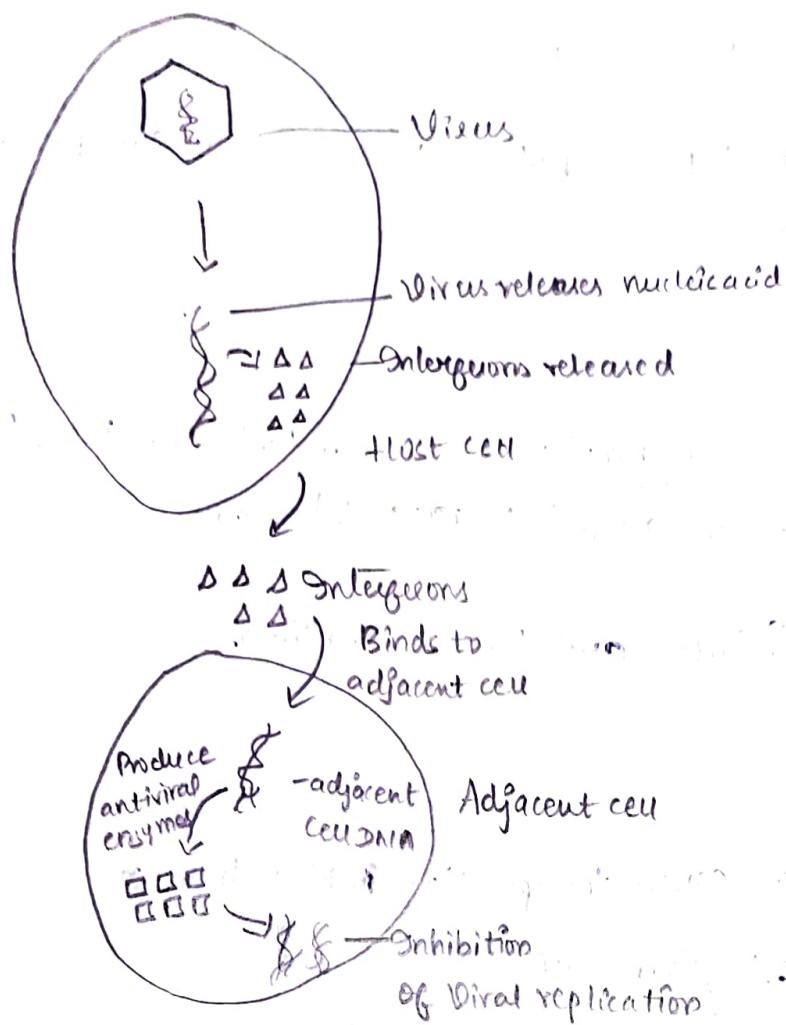

Interferon - α

Interferon - β

Interferon - γ

Mechanism of Interferons.

- Interferons are released when any Viral infections occur.
- The viruses release its nucleic acid into cytoplasm of the host cell.
- Then the host cell releases Interferons.
- These interferons binds to adjacent cell and there it regulates the DNA of adjacent cell to produce antiviral enzymes.
- These enzymes inhibit the Viral replication further.
- Hence the Viral attack is inhibited by Interferons.

Mechanism of Interferons.

Production of Interferons in E.coli

Production of Interferons in E.coli does not occur effectively, because in E.coli, the glycosylation of protein which is essential for the production of Interferons does not occur. Hence, E.coli cultures won't support and produce effective Interferons.

Production of Interferons in Yeast:

Saccharomyces cerevisiae can able to produce Interferons effectively because in this glycosylation of protein is possible, hence the Interferon gene is inserted into H yeast cells, which gives several fold Interferons than E.coli.

Production of Hybrid Interferons

Here, Glycosylation step is bypassed and interferons are produced much faster and easier.

Isolation of Interferons

Blood is the only source for the extraction of Interferon. But 50000 litres of blood is needed to get just 100 mg of interferons.

→ Therefore it is difficult and tedious method.

Uses of Interferons

- Can be used in cancer therapy like in Neck, head, renal cell cancers, Kaposi's Sarcoma, Myeloma etc.
- Other diseases are Genital warts, hepatitis B etc.
- Common cold, influenza virus etc.
- AIDS, other Viral diseases etc.

II ① Methods of Enzyme Immobilization

Enzyme Immobilisation: This is a technique of confining / adhering of enzymes to the surface of the inert support.

There are 4 main methods:

- 1) Adsorption
- 2) Entrapment
- 3) Covalent Bonding
- 4) Cross linking.

i) Adsorption:

In this physical method, the enzymes are attached to the surface of the inert support.

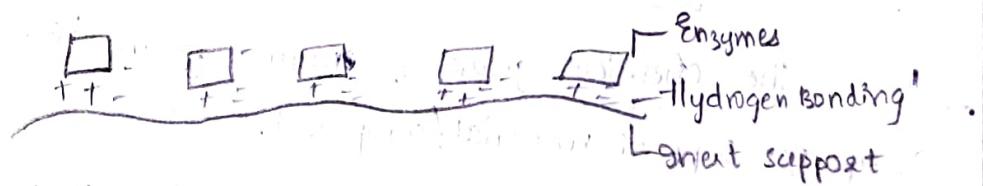

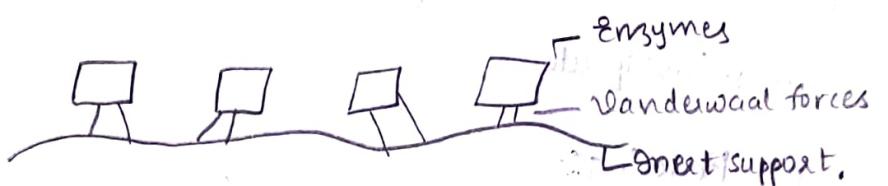

→ The inert support may be inorganic or organic in nature.

Inorganic - Glass, silica, alumina, gel etc.

Organic - starch, Ethyl cellulose etc.

→ However, this adsorption of enzymes occurs by weak van der waal forces or through hydrogen bonding.

→ Hence, the minute changes in the pH, ionic strength, temperature can change or reverse the enzyme to free enzymes instead of binding to the support.

ADSORPTION

ii) Entrapment:

→ This is the entrapment of the enzymes into gels, matrix, fibres or microcapsules.

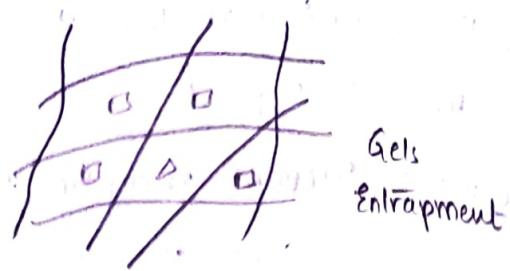

→ The trapping should be have pore size in which the enzymes are retained where substrates and products should pass through.

→ The entrapment will have disadvantage of leakage,

There are various methods of entrapment:

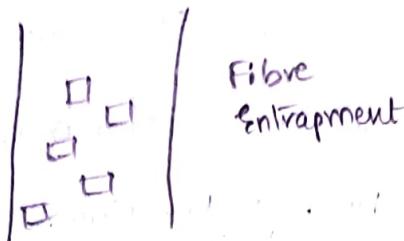

1) Entrapment by Gels:

In this mesh like format, the enzymes are entrapped.

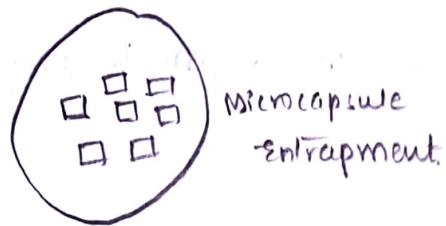

2) Entrapment by Fibres:

Fibre like format is formed for the entrapment of enzyme.

3) Entrapment by microcapsules:

Closed circle where the matrix of hydrophilic and hydrophobic polymers to form microcapsules.

3) Covalent Bonding:

→ In this the chemical groups of enzymes forms binds between chemical groups of support material/compound.

→ But for the correct affinity, these materials should be pretreated, later Enzyme binding should be done.

These are several methods for binding.

1) Cyanogen Bromide formation:

The support material should be pretreated with Cyanogen Bromide and then the enzymes chemical group binds to its strongly.

Eg: Amino benzyl derivatives.

2) Diazotation:

In this the support material is pretreated with NaNO_2 and HCl , later the enzymes, chemical groups are attached to form bonds.

3) Peptide formations:

Tyrosyl group of enzymes forms bond with amino group of support material.

4) Bi / Poly functional Groups:

Glutaraldehyde, amino allyl derivatives are used. On this amino/chemical group of enzyme is attached to amino/chemical group of support material.

4) Cross Linking:

Absence of solid material is a characteristic feature of the use of cross linking.

→ The enzymes are treated with compounds glutaraldehyde, hexamethane to form the crosslinks which will the backbone of the enzyme, made it immobilised.

→ cross linking can be effectively achieved by the use of glycerate glutaraldehyde - lysyl group of enzymes are attached to amino groups of glutaraldehyde creating a backbone of enzyme.

→ However, this can be a disadvantage ie. it can withstand extreme pH and higher temperatures.

3.

IMMUNE STIMULATION :-

These are the agents which stimulate the Immune system to achieve

a immune response.

→ There are several ways to stimulate Immune System:

- 1) Bacterial Vaccines
- 2) Viral Vaccines
- 3) Therapeutic Vaccines
- 4) Combination Vaccines
- 5) Antigenics
- 6) Interleukins
- 7) Colony stimulating factors.

1) Bacterial Vaccines

These are killed / attenuated bacterial vaccines, which are used to stimulate the production of antibodies against particular bacteria, which can fight against later attacks.

→ TB vaccine - is used to fight against *Mycobacterium tuberculosis* against Tuberculosis.

Side effects:

May be rare like hypersensitivity reactions.

2) Viral Vaccines:

These are killed / attenuated Viruses which are unable to produce Viral replication but have the capability to produce Immune response.

Side effects :-

Blood in stool

Pneumonia etc.

3) Therapeutic Vaccines:

These are the vaccines which are used to suppress the disease causing cell by stimulating the immune system to that particular cell.

→ These are very common vaccines against many diseases like cancer.

4) Combination Vaccines :-

These are combination of antigens against different antigens or against different strains of same disease causing organisms.

→ These are advantageous, multipurpose, because, no. of injections to be injected is decreased and side effects will also be less, when compared to single vaccination.

Ex:- MMR - Measles, Mumps, Rubella.

DTaP - Diphtheria, Tetanus, Pertussis.

combination vaccines for children :

Ex:- IPV, DTaP, Hib - Polio, Diphtheria, Tetanus, Pertussis.

Side effects:

However the side effects will be minimized in combined vaccinations.

5) Interferons :-

→ These are group of glycoproteins which are produced when any virus attacks the host cell / organism.

→ These glycoproteins produce antiviral enzymes when a virus releases its nucleic acid for replication. Thus, these antiviral enzymes inhibit the further viral replication by binding to DNA of adjacent cell.

Uses:

Cancer Therapy, AIDS, common cold etc.

6) Interleukins:

These are a group of cytokines which can kill the invading antigen.

→ These interleukins are used to stimulate the immune system when any infections injuries occur.

Ex: Monocyte

7) Colony stimulating factors:

In cancer therapy, the white blood cell count decreased abnormally (Neutropenia). Hence colony stimulating factors are used to rise the white blood count in the plasma level.

III B. Pharm / II Sem - II Mid Examination

Sub: PHARMACEUTICAL BIOTECHNOLOGY(BP605T)**Marks: 10****Time: 10 min****Multiple choice questions****10 x 1=10 Marks**

1. "AB" Blood group is
a) Universal donor b) Universal acceptor c) Both of the above d) None of the above (b) ✓

2. Discovery of Blood group
a) Joseph lister b) Alexander flemming
c) Landsteiner d) Louis pasteur (c) ✓

3. Extra chromosomal DNA is
a) Eukaryotes b) Prokaryotes
c) Ribosome d) Plasmid (d) ✓

4. Storage condition of Whole Human Blood is
a) 0°-4°c b) 4°-6°c
c) 6°-8°c d) 8°-10°c (b) ✓

5. The mobile segment of DNA is called as
a) Histone b) Plasmid c) Transposon d) Adenine (c) ✓

6. How many hydrogen bonds are formed between DNA and histones in each nucleosome?
a) 142 b) 114 c) 42 d) 24 (a) ✓

7. Location of Chromosome in eukaryotes is
a) Golgi apparatus b) Endoplasmic reticulum
c) Cytoplasm d) Nucleus (d) ✓

8. ELISA was introduced by
a) Louis Pasteur b) Peter Perlmann
c) Alexander Fleming d) Joseph lister (b) ✓

9. The process by which DNA is transferred from one bacterium to another by a virus is
called as
a) Conjugation b) Transduction
c) Transformation d) None of the above (b) ✓

10. Southern blotting technique is used to detect the
a) Protein b) DNA
c) RNA d) Amino acids (b) ✓

II - MID EXAMINATION.

Q2. Define Mutation:

Mutation is a sudden change in the structural gene of a DNA, which can cause any damages to the DNA.

There are mainly two types of mutation:

i) Point Mutation.

ii) Frameshift Mutations.

Point Mutations :

These mutations are due to the replacement of one or more base pairs.

These are of two types again:

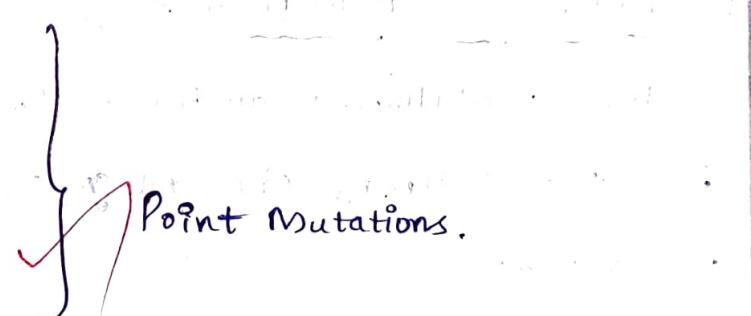

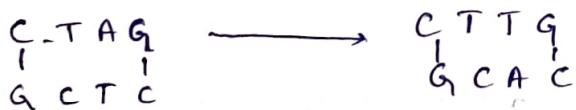

i) Transition :- In this the base pair which is replaced by the another (Purine) or pyrimidine.

ii) Transversion :- In this, the base pair replaced by pyridine by purine / purine by Pyrimidine or vice versa.

Transition

Transversion

Consequences of Point Mutations

- Silent Mutations
- Nonsense mutations
- Non-sense Mutations

i) Silent Mutations:-

In case of UCA, if it codes for serine, then change in the last codon like UCU, then also it codes for serine amino acid. Then the process won't get disturbed due to the change in the codon.

→ Hence it is called as Silent Mutations.

ii) Misense Mutations:

In the case of UCU, which codes for the serine amino acid, if changes to ACU, which is a structural codon, codes for Threonine amino acid, leads to the mis function.

→ But this may be unacceptable / acceptable / partially acceptable.

iii) Nonsense Mutation:-

In the case of UCU, which codes for serine amino acid, if changes to UAA, which is a termination codon, then the entire process will inhibited and therefore the process will ceased.

(ii) Frameshift Mutations:-

These mutations may involve insertion / deletion of base pairs into the codon of structural gene.

i) Insertion:

In this one more base pairs can be added, so that the entire process may / may not change.

ii) Deletion:

In this one/more base pairs can be removed off from the sequence of structural gene / codon.

Consequences of frameshift Mutations:

The shift of frame, result in the insertion / deletion.

→ Hence, insertion / deletion won't affect the entire synthesis.

→ Hence, the translation process continues till the end.

But at final stage, the premature protein can be obtained due to this additions / deletions.

3.

ELISA.

Enzyme Linked Immuno Sorbant Assay was first identified by Peter Pearlmann. It was a antigen-antibody technique.

→ It was performed in 96 polystyrene well plates.

→ In ELISA, the detection of proteins, amides, peptides, Nucleic acids etc. can be performed.

Depending upon the type of detection, they are of 3 types.

i) Indirect ELISA - detection of antibody

ii) Sandwich ELISA - detection of antigen

iii) Competitive ELISA - detection of amount of antigen-antibody..

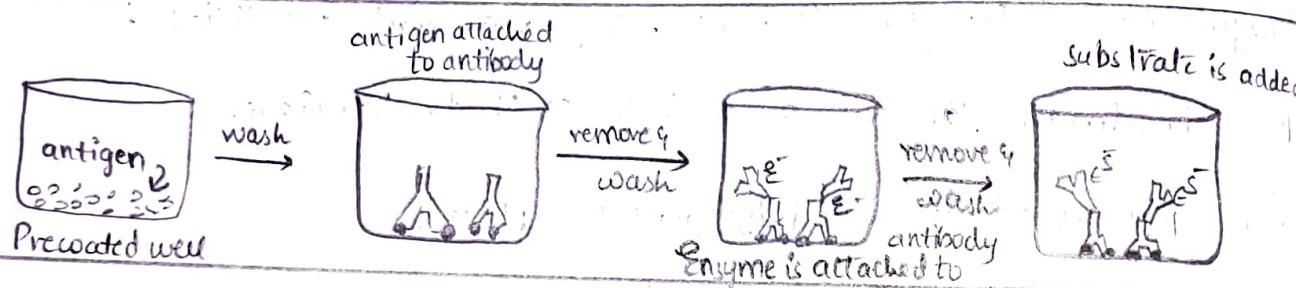

i) Indirect ELISA

Principle:

In this, the antibody is detected using ELISA Technique

Procedure:-

- 1) The wells are coated with antigens.
- 2) Then, it is removed and washed.
- 3) Later antibodies are added, to which they are bounded.
- 4) Afterwards, it was washed and added with conjugated enzyme to which both the antigen and antibody attached.
- 5) Then, the substrate is added, to which the enzyme should attached.
- 6) Then the colourless antibody antigen produce a coloured compound which has to be analysed.

ii) Sandwich ELISA:

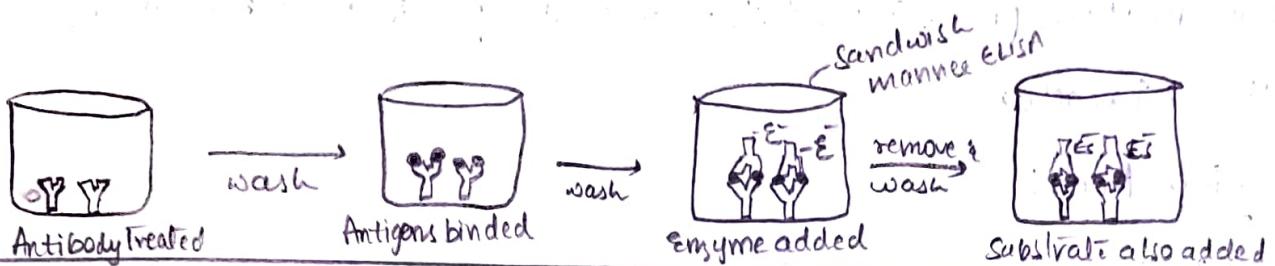

Principle:

To detect the presence of antigen in the well.

Procedure:-

- 1) The wells are precoated with the solution of antibody.
- 2) Then it is removed and washed.
- 3) Later antigens are added externally, to which they will bind.

- v) Afterwards, it was washed and added with Enzyme conjugated, which will bind to that antigen-antibody complex.
- vi) Then the substrate is added, to which the enzyme should attach, and form a Antigen antibody enzyme substrate complex in a sandwich manner.
- vii) Then a colour will be produced which is directly proportional to the amount of antigens present.

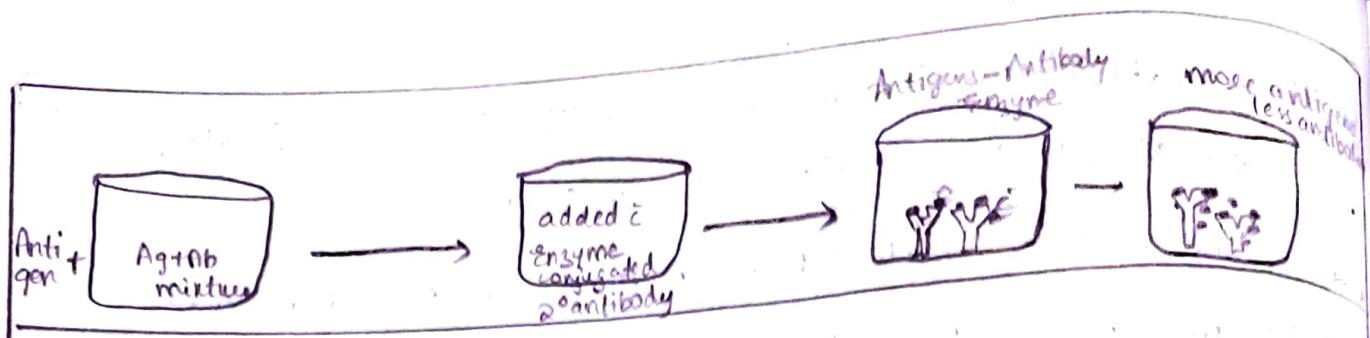

iii) Competitive ELISA

Principle :-

In this the amount of antibody present in the well is detected.

Procedure :-

- 1) The antigen is previously incubated before inoculated in the well.
- 2) The antigen- antibody mixture is added to the well where the Enzyme conjugated secondary antibody is also attached.
- 3) Then the complex formed is antibody-antigen and Enzyme, to that Substrate also added.
- 4) The more the antigens present, the less available will be the antibodies.
- 5) The amount of antibodies concentration is inversely proportional to the absorbance.

1.

- ① Fermenter : It is also called as Bioreactor which is a device used for the cultivation and growth of fermentating microorganisms.
- Fermentation process in Industries will takes place in large stirred tanks like Bioreactors.

Various Parts :

Sparger

Agitator

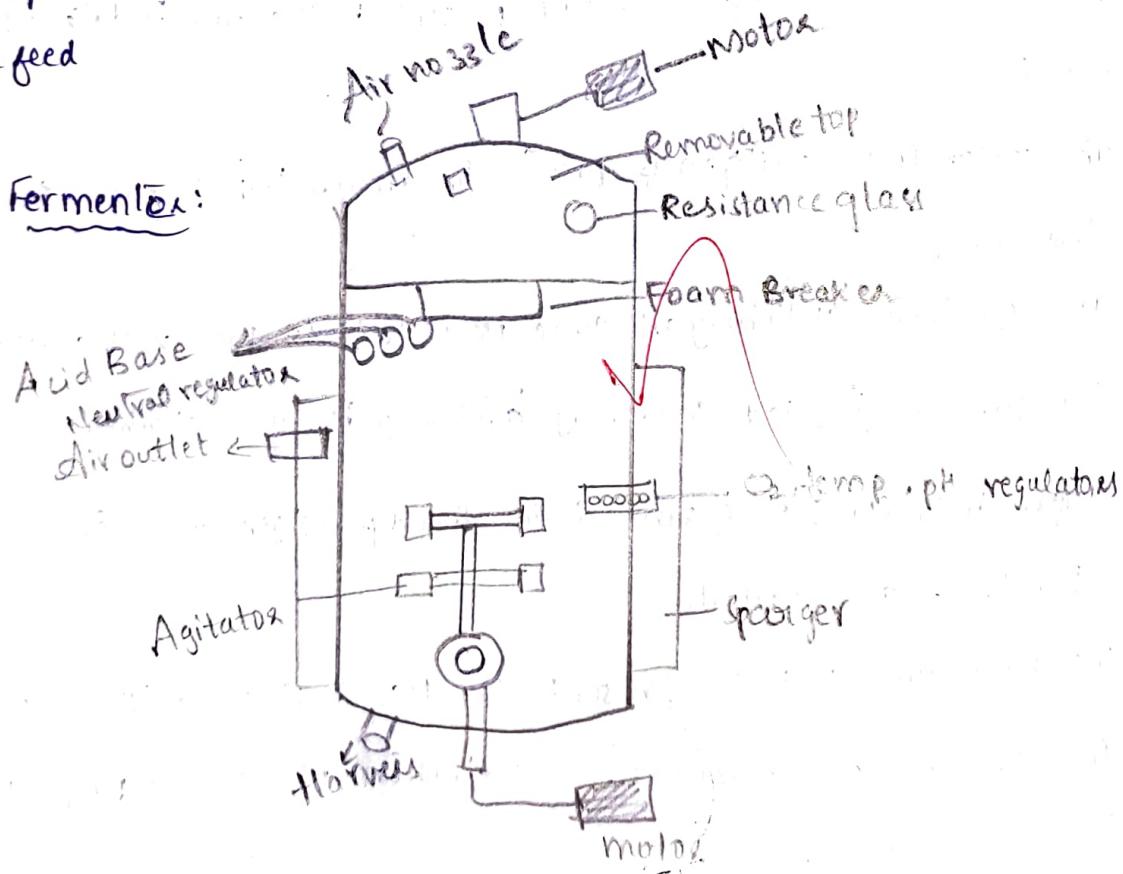

Inlet & outlet

Removable top

Nozzle for feed

Jacket.

Diagram of Fermenter:

Conventional Bioreactor designs:-

- Basically a bioreactor is a giant tank like in structure which is dome shaped in top and bottom.
- The fermenter should be made up of stainless steel.
- It should not contain any ridged surface, the surface should be smooth, so that the cleaning of fermenter is easily made.
- Then it should be attached with a jacketed system to provide cooling and heating.
- The continuous oxygen supply to the fermentor tank is necessary in case of aerobic process.
- The inner surface of the tank should not contain any crevices, so that the contamination does not occurs.
- The tank should be visible (or) transparent if possible, for the frequent inspection of the process.

Various Control Systems of Fermentors:

1) Temperature:

The fermentor at high temperature ~~does not allow the microbial growth,~~ low temperature ~~does not activation~~ the fermentation process. Hence Optimum temperature should be maintained.

2) pH:

At low pH only these microbes will survive and in fact it is also advantageous that at low pH levels the contamination wont occur inside the tank.

3) Nutrient medium:

The more the nutrient medium, the wastage will be more.
Less nutrient medium is inadequate for the growth of microbes.
Hence optimum growth of microbes need nutrient medium levels.

4) Antifoaming Agents :-

Addition of antifoaming agents will leads to desired fermentation levels. Hence antifoaming agents like vegetable oils are used,

→ If in case foams are formed, there is a provision for breaking of the foam.

5) Acid, Base Neutral Regulators:

For the variations in the cultivation inside the fermentor, the pH of the medium should be controlled.

→ There is a provision for the removal of entire content by opening the roof of the fermentor.

→ The fermenter is provided with agitator, sparger which are used to rotate the mixtures /mediums in the tank by paddle shaped stirrers.

**Mid exam marks scored by students
