Your official test report will be posted to you 13 days after the test. Please note the preview of your IELTS result cannot be used as official confirmation of your test result.

Overall Band Score

Overall 6.5 **Competent User**

The test taker has an effective command of the language despite some inaccuracies, inappropriate usage and misunderstandings. They can use and understand fairly complex language, particularly in familiar situations.
Advice to improve your score

Continue to develop your vocabulary by reading widely. Listen to as much English as you can so that your understanding becomes more automatic. Listen to longer recordings such as interviews and films, with and without English subtitles, pausing and repeating the recording when necessary. Note the words you didn't understand immediately, so you can review them. Try to understand those times when the speakers don't directly say what they mean. What are the clues you use to understand these in your own language? Use the same strategy to understand them in English.

At this level, it is important to broaden the range of texts you read further. Continue to develop your awareness of how to read different types of texts differently. What features does that particular type of text typically have? How is information structured and arranged in such texts? Will it require making inferences? Will there be a summary somewhere? Use your knowledge of these and approach the reading task in an appropriate way. Where you want to know the overall argument or specific arguments, try to do this as efficiently as possible. As an exercise, try to find several opinion-based texts on the internet, and then determine the similarities and differences in their opinions and views.

Test **Score** **Your result explained**
Test takers at Band 6.5 can typically follow extended speech and understand detailed instructions. They can generally understand directly-stated facts, attitudes, opinions and purposes. They can also generally pick out main ideas, and relevant and irrelevant information; and can also generally infer implied meanings. They can do this without having to process individual words and structures and can remember enough of what they have heard to understand references such as pronouns. They can understand most vocabulary relating to a range of topics, including some terms typical of academic English.

Listening 6.5

Reading 7.0

Test takers at Band 7 can typically deal with a variety of factual and opinion-based texts that may be complex and dense with information. They are very good at using their wide vocabulary knowledge to create meaning, both within and across sentences, on a range of general and specialised topics. They can follow an argument and distinguish between main ideas and supporting details, and are good at understanding attitude, opinion and implication. They are able to do this by using reading strategies such as skimming and scanning, and by synthesizing information and drawing inferences.

Speaking 6.0

Test takers at this band can typically speak at length, although they are sometimes less clear or fluent because of repetition, self-correction, or hesitation to search for words or grammar. Speaking is generally well-organised, and ideas are generally well linked, but with some errors. They have enough vocabulary to discuss topics clearly and at length, although there are often errors, and they can usually paraphrase well. They can use simple and complex grammar structures but with limited range. There may be frequent grammar errors, particularly in more complex structures, but language is usually easy to understand. Pronunciation can be clear and effective, but there may be problems. They are usually easy to understand, although words may be repeated at times.

Talk to other English speakers about more abstract topics or more difficult current topics. Keep the discussion going for as long as possible. At the same time, try to express your ideas as accurately as you can, using the best words you know. Many of your ideas will also require the use of complex grammatical structures. If you're using several simple sentences, try to join them up in a way that makes your point clearer. Listen (and read) in English more to help you pick up natural and idiomatic phrases. When listening, note the rhythm and also the words that the speaker stresses. Is your rhythm similar? Are you putting the stress on the right words?

Swathi
PRINCIPAL
VIJAYA INSTITUTE OF PHARMACEUTICAL SCIENCES FOR WOMEN
ENIKEPADU, VIJAYAWADA-521 108.

Test takers at this band can typically address all parts of the question, some more fully than others. (AC) They can give an overview. (GT) The letter has a generally clear purpose; the tone is sometimes not consistent. Key features and bullet points are covered. The point of view and main ideas are relevant but the conclusion(s) may be unclear. Some details might be irrelevant or wrong. Test takers can arrange their ideas logically, so that the writing has a clear progression from start to finish. They are able to use some linking words well, but others with mistakes. They can paragraph their Task 2 writing, although not always logically. They have enough vocabulary to answer the question. They try to use some less common words. They make some spelling mistakes, but the reader can still understand. They can write a mix of simple and complex sentences. The grammar and punctuation mistakes do not usually cause difficulty for the reader.

Practice writing to give information and make arguments. Make sure you cover all the points that need to be covered, providing supporting ideas and details. Reread your work and see if you can make your points clearer. Is the ordering of your ideas logical? Sometimes, rearranging them can make things clearer. You can also try joining up or separating sentences, using the right connecting devices, and changing where you divide your paragraphs. Continue to develop your vocabulary. Words can be similar in meaning but differ in formality, in their tone, and in their implications. Focus on learning the best words to use for the writing task, the situation, and what you want to say. Challenge yourself by producing sentences that are more complex. If you make mistakes with them, don't worry too much; just check and see how you can fix them.

Writing

6.5

About Your GRE[®] Score Report

Score Reporting Policies

With the *ScoreSelect*[®] option, you can decide which test scores to send to the institutions you designate. There are three options to choose from:

- Most Recent option – Send your scores from your most recent test administration
- All option – Send your scores from all administrations in the last five years
- Any option – Send your scores from one OR as many test administrations in the last five years (this option is not available on test day when you select up to four FREE score reports)

Scores for a test administration must be reported in their entirety. Institutions will receive score reports that show only the scores that you selected to send to them. There will be no special indication if you have taken additional GRE tests. See the *GRE[®] Information Bulletin* for details. The policies and procedures explained in the Bulletin for the current testing year supersede previous policies and procedures in previous bulletins.

Scores will be sent to designated score recipients approximately 10-15 days after a computer-delivered test and 5 weeks after a paper-delivered test. If your scores are not available for any reason, you will see "Not Available" in Your Test Score History.

GRE test scores are reportable according to the following policies:

- For tests taken prior to July 1, 2016, scores are reportable for five (5) years following the testing year in which you tested (July 1 – June 30). For example, scores for a test taken on May 15, 2015, are reportable through June 30, 2020. GRE scores earned prior to August 2011 are no longer reportable.
- For tests taken on or after July 1, 2016, scores are reportable for five (5) years following your test date. For example, scores for a test taken on July 3, 2016, are reportable through July 2, 2021.

Note: Score recipients will only receive scores from test administrations that you have selected to send to them.

Percentile Rank (% Below)

A percentile rank for a test score indicates the percentage of test takers who took that test and received a lower score. Regardless of when the reported scores were earned, the percentile ranks for General Test and Subject Test scores are based on the scores of all test takers who tested within the most recent three-year period.

Retaking a GRE Test

You can take the *GRE[®] General Test* once every 21 days, up to five times within any continuous rolling 12-month period (365 days). This applies even if you canceled your scores on a test taken previously. You can take the paper-delivered *GRE General Test* and *GRE[®] Subject Tests* as often as they are offered.

Note: This policy will be enforced even if a violation is not immediately identified (e.g., inconsistent registration information) and test scores have been reported. In such cases, the invalid scores will be canceled and score recipients will be notified of the cancellation. Test fees will be forfeited.

For More Information

For information about interpreting your scores, see *Interpreting Your GRE Scores* at www.ets.org/gre/test-takers/general-test/scores/understand-scores.

For detailed information about your performance on the Verbal Reasoning and Quantitative Reasoning sections of the computer-delivered *GRE General Test*, access the free *GRE Diagnostic Service* from your ETS account. This service includes a description of the types of questions you answered right and wrong, the difficulty level of each question, and the time spent on each question. This service is available approximately 15 days after your test administration and for six months following your test administration.

If you have any questions concerning your score report, email GRE Services at gre-info@ets.org or call 1-809-771-7670 or 1-866-473-4373 (toll free for test takers in the U.S., U.S. Territories and Canada) between 8 a.m. and 7:45 p.m. (New York Time).

Note: This report is not valid for transmission of scores to an institution.

VELAGAPUDI SAI CHARITHA**Most Recent Test Date: August 7, 2023**

Date of Birth: December 3, 2001

Registration Number: 2254202
Print Date: August 16, 2023**About Your GRE® Score Report****Score Reporting Policies**

With the *ScoreSelect*® option, you can decide which test scores to send to the institutions you designate. There are three options to choose from:

- Most Recent option – Send your scores from your most recent test administration
- All option – Send your scores from all administrations in the last five years
- Any option – Send your scores from one OR as many test administrations in the last five years (this option is not available on test day when you select up to four FREE score reports)

Scores for a test administration must be reported in their entirety. Institutions will receive score reports that show only the scores that you selected to send to them. There will be no special indication if you have taken additional GRE tests. See the *GRE® Information Bulletin* for details. The policies and procedures explained in the Bulletin for the current testing year supersede previous policies and procedures in previous bulletins.

Scores will be sent to designated score recipients approximately 10-15 days after a computer-delivered test and 5 weeks after a paper-delivered test. If your scores are not available for any reason, you will see "Not Available" in Your Test Score History.

GRE test scores are reportable according to the following policies:

- For tests taken prior to July 1, 2016, scores are reportable for five (5) years following the testing year in which you tested (July 1 – June 30). For example, scores for a test taken on May 15, 2015, are reportable through June 30, 2020. GRE scores earned prior to August 2011 are no longer reportable.
- For tests taken on or after July 1, 2016, scores are reportable for five (5) years following your test date. For example, scores for a test taken on July 3, 2016, are reportable through July 2, 2021.

Note: Score recipients will only receive scores from test administrations that you have selected to send to them.

Percentile Rank (% Below)

A percentile rank for a test score indicates the percentage of test takers who took that test and received a lower score. Regardless of when the reported scores were earned, the percentile ranks for General Test and Subject Test scores are based on the scores of all test takers who tested within the most recent three-year period.

Retaking a GRE Test

You can take the *GRE® General Test* *once every 21 days, up to five times* within any continuous rolling 12-month period (365 days). This applies even if you canceled your scores on a test taken previously. You can take the paper-delivered GRE General Test and *GRE® Subject Tests* as often as they are offered.

Note: This policy will be enforced even if a violation is not immediately identified (e.g., inconsistent registration information) and test scores have been reported. In such cases, the invalid scores will be canceled and score recipients will be notified of the cancellation. Test fees will be forfeited.

For More Information

For information about interpreting your scores, see *Interpreting Your GRE Scores* at www.ets.org/gre/test-takers/general-test/scores/understand-scores.

For detailed information about your performance on the Verbal Reasoning and Quantitative Reasoning sections of the computer-delivered GRE General Test, access the free GRE Diagnostic Service from your ETS account. This service includes a description of the types of questions you answered right and wrong, the difficulty level of each question, and the time spent on each question. This service is available approximately 15 days after your test administration and for six months following your test administration.

If you have any questions concerning your score report, email GRE Services at gre-info@ets.org or call 1-609-771-7670 or 1-866-473-4373 (toll free for test takers in the U.S., U.S. Territories and Canada) between 8 a.m. and 7:45 p.m. (New York Time).

Director, NTA

Important Instructions

- The NTA Score of a candidate indicates the percentage of candidates who have scored EQUAL TO OR BELOW (same or lower raw marks) that candidate in that session.
- The NTA scores of a candidate have been calculated as follows:
 $100 \times \frac{\text{Number of candidates appeared in the 'Session' with raw score EQUAL TO OR LESS than the candidate}}{\text{Total number of the candidates appeared in the 'Session'}}$
NTA score is not the same as percentage of marks obtained.
- A National Merit Ranking (All India Rank) has been arrived on the basis of NTA Score.
- Candidates having same Score shall be listed in a chronological (ascending) order as per their date of birth.
- Candidates having same score would be given the same Merit, and the Merit number would be increased by the same number i.e. if there are two candidates at Merit 2, Merit 3 would not be awarded to the next candidate but Merit 4 would be given.
- The admission authorities are advised to use score awarded to the students for allotment of seat in the AICTE approved programs along with the other criteria that may exist, as applicable.
- Candidate's particulars including Category and Person with benchmark Disability(PwBD) have been indicated as mentioned by the candidate in the online application form.
- Instances of incorrect information provided by the candidates, if detected at any stage.

September 25, 2023

Letter of Intent

Md Afreena
1-42, Auto Nagar,
Penamaluru Mandal,
Krishna, Andhra Pradesh

Congratulations!

This has reference to the discussion we had with you regarding your employment in our organization located at Plot No C138 Industrial Area Phase 8, Mohali. We are pleased to confirm that we intend to appoint you for a period of 6 months at the designation of Medical Scribe Trainee in grade BJ2 at HCS group and salary mutually agreed by us during our discussion.

Please find attached the hiring norms.

This letter is subject to your joining duty on or before **October 16, 2023**.

On joining, you are requested to report to the HR Department. You are also requested to bring the original & photocopy (self-attested) certificates of your educational & professional achievements, Aadhar Card, PAN Card and five recent passport size photographs.

Your joining will be subject to the positive reference check.

A formal appointment letter will be issued at the time of your joining.

Thanking you,
Yours faithfully,
For IDS Infotech Ltd

ENIKEPADU, VIJAYAWADA - 521 108

Medical Scribe Hiring Norms

- This is permanent work from office job role at Mohali or Noida location. We will assign job location as per the hiring needs at the specific job location.
- You will not earn any compensation for the first month training. You have to start the training of first month from Office.
- Candidates will be hired as Trainees on **Rs. 1.8 LPA (PF and ESI deductions applicable as per compliance)**. It's mandatory for everyone to start training at office from 1st Month onwards.
- There will be other crucial checkpoints throughout the training period of 4 to 5 months. One needs to clear/pass through all the checkpoints and any failure to do so would lead to the exit from the training program.
- After Training, once candidate becomes Doctor approved and starts working with doctor then there will incentives other than Per Month salary. Incentive limit will be as per the performance of an employee. Candidate will get the detailed explanation and understanding of Incentive criteria from the operations team once he/she becomes Doctor approved and start working with doctor.
- After Successful completion of classroom and On-The-Job trainings of 13 months; the Trainee will become eligible to come on the rolls of IDS as full-time employee and also become eligible for revision of salary and incentives as per company's extant policy.
- We can allow maximum up to 2 Leaves during your training. If you have exams pending and need more than 2 leaves then please join when you are free from your exams.
- Trainee will have to sign a **service agreement or contract of 24 months** on the day of joining (TR code) which will be effective from day one of his/her joining. Any trainee or employee cannot leave the organization or resign during these 24 months
- At any point of time in the training process the moment trainee becomes DR (Doctor Ready) and any deviation from the set norms or breach would incur a compensating amount of Rs 1,20,000 or actuals whichever is higher effective from the date of achieving DR(Doctor Ready) status.
- It is mandatory for you to disclose your medical conditions during the hiring process. In case of failure to provide the results at the time of joining and in case any medical condition is found at a later stage, the trainee would be liable for justifiable actions according to the prevailing policy of the company/client.
- After achieving DA status, the trainee might have to start working from home depending upon the management's decision considering pertinent reasons.
- Please feel free to reach out to us on 9548450078, 7009880619, number or drop a

1. APPOINTMENT OF FREELANCER AND SCOPE OF SERVICES

- 1.1. The Company appoints and the Freelancer accepts the appointment as the Freelancer with effect from May 15, 2023 for providing the Services and deliverables (more particularly set out in Schedule I attached herein) and in terms of this Contract.
- 1.2. The relationship of the Freelancer with the Company is that of an independent contractor, and nothing in this Contract will be construed to create a joint partnership, joint venture, or employer-employee relationship. Freelancer shall remain responsible for performance of its Services, in accordance with the terms and conditions of this Contract.
- 1.3. Unless otherwise provided in this Contract, the Freelancer shall have no right or claim against the Company for EPF benefits, ESI benefits, social security benefits, workmen compensation benefits, disability benefits, unemployment benefits, health benefits or any other employee benefits of any kind.

2. OBLIGATIONS AND RESPONSIBILITIES

- 2.1. The Freelancer must perform the following obligations and responsibilities in relation to rendering of the Services:
 - (i) The Freelancer shall be devoted for necessary time, as and when sought or required by the Company in fulfilling his obligations under this Contract. The Freelancer shall exercise Freelancer's best endeavor to ensure that the Services are provided to the Company in an effective and timely manner, in accordance with the terms and conditions of this Contract.
 - (ii) The Freelancer must perform the Services with the highest degree of care, skill and diligence and ensure that all of the Services are performed completely and properly, as per the terms of this Contract. The Services and deliverables provided by the Freelancer are in compliance with this Contract and applicable laws, conform to the recognised professional standards and the Freelancer must at all times safeguard and protect the Company's interest. The Freelancer must provide the Services with the highest standards of integrity and business ethics and the Services must be completed by the Freelancer as per the stipulated timelines set by the Company.
 - (iii) The Freelancer must not make any statement, claim or representation on behalf of the Company, incur any liability on behalf of the Company or in any way pledge or purport to pledge the Company's credit or purport to make any contract binding upon the Company.
 - (iv) The Freelancer must at all times, comply with all relevant legal, regulatory and other mandatory requirements applicable to the performance of Freelancer obligations hereunder.

PLOT NO: 246, SRINIVASA NAGAR,
BANK COLONY.VIJAYAWADA.

Subject: Offer Letter

Dear Bollineni Swathi,

Based on your interview with us, we are pleased to extend you an offer to join Aquity Solutions India Private Limited (hereinafter referred to as "the Company" or "Aquity Solutions") as **Medical Scribe Trainee** at its office located at **Hyderabad - Secunderabad** in the state of Telangana.

We welcome you to Aquity Solutions, and we are confident that you will enjoy being a part of it, as much as we shall cherish our association with you. This Offer Letter confirms your total emoluments and other terms of your employment, which if accepted by you, will be as follows:

1. Your Annual Cost to the company (CTC) shall be **Rs. 420012/- only (Rupees Four Lakh Twenty Thousand Twelve only)** and the same will be structured as per the attached Annexure I.
2. You shall join us on or before **02-Oct-2023** failing which the offer will be void.
3. This Offer Letter and your employment with Aquity Solutions shall be subject to satisfactory Background Verification Report as per the Company's process.
4. Your employment with Aquity Solutions will be governed by your Appointment Letter, which will be issued to you at the time of your joining.
5. Your services with the Company will be subject to a probation period of three (3) months from the date of your joining, during which period your performance would be monitored and evaluated prior to confirming your services with the Company.
6. The terms of this Offer Letter are valid for seven (7) days from the date of this letter. If we do not receive your acceptance of this offer, the terms of this letter and this offer will be deemed to have been rejected by you unless otherwise communicated to you by the Company in writing.
7. Please provide all the documentation as listed in Annexure II, on or before joining the Company.
8. To Indicate your acceptance of this Offer Letter, please sign and return a duplicate copy of this letter.

We look forward to hear from you regarding your decision to join Aquity Solutions. You are expected to keep this offer strictly confidential. In case, you have anything you would like to discuss further, please feel free to get back to us on the same.

We wish you a successful career and look forward to your joining us.

Sincerely yours,

For Aquity Solutions India Private Limited

Subject: Offer Letter

Dear Indurthi Bharathi,

Based on your interview with us, we are pleased to extend you an offer to join Aquity Solutions India Private Limited (hereinafter referred to as "the Company" or "Aquity Solutions") as Medical Scribe Trainee at its office located at Hyderabad - Secunderabad in the state of Telangana.

We welcome you to Aquity Solutions, and we are confident that you will enjoy being a part of it, as much as we shall cherish our association with you. This Offer Letter confirms your total emoluments and other terms of your employment, which if accepted by you, will be as follows:

1. Your Annual Cost to the company (CTC) shall be Rs. 420012/- only (Rupees Four Lakh Twenty Thousand Twelve only) and the same will be structured as per the attached Annexure I.
2. You shall join us on or before 02-Oct-2023 failing which the offer will be void.
3. This Offer Letter and your employment with Aquity Solutions shall be subject to satisfactory Background Verification Report as per the Company's process.
4. Your employment with Aquity Solutions will be governed by your Appointment Letter, which will be issued to you at the time of your joining.
5. Your services with the Company will be subject to a probation period of three (3) months from the date of your joining, during which period your performance would be monitored and evaluated prior to confirming your services with the Company.
6. The terms of this Offer Letter are valid for seven (7) days from the date of this letter. If we do not receive your acceptance of this offer, the terms of this letter and this offer will be deemed to have been rejected by you unless otherwise communicated to you by the Company in writing.
7. Please provide all the documentation as listed in Annexure II, on or before joining the Company.
8. To indicate your acceptance of this Offer Letter, please sign and return a duplicate copy of this letter.

We look forward to hear from you regarding your decision to join Aquity Solutions. You are expected to keep this offer strictly confidential. In case, you have anything you would like to discuss further, please feel free to get back to us on the same.

We wish you a successful career and look forward to your joining us.

Sincerely yours,

For Aquity Solutions India Private Limited

Subject: Offer Letter

Dear Blessy Lydia Dandala,

Based on your interview with us, we are pleased to extend you an offer to join Aquity Solutions India Private Limited (hereinafter referred to as "the Company" or "Aquity Solutions") as **Medical Scribe Trainee** at its office located at Hyderabad - Secunderabad in the state of Telangana.

We welcome you to Aquity Solutions, and we are confident that you will enjoy being a part of it, as much as we shall cherish our association with you. This Offer Letter confirms your total emoluments and other terms of your employment, which if accepted by you, will be as follows:

1. Your Annual Cost to the company (CTC) shall be **Rs. 420012/- only (Rupees Four Lakh Twenty Thousand Twelve only)** and the same will be structured as per the attached Annexure I.
2. You shall join us on or before **02-Oct-2023** failing which the offer will be void.
3. This Offer Letter and your employment with Aquity Solutions shall be subject to satisfactory Background Verification Report as per the Company's process.
4. Your employment with Aquity Solutions will be governed by your Appointment Letter, which will be issued to you at the time of your joining.
5. Your services with the Company will be subject to a probation period of three (3) months from the date of your joining, during which period your performance would be monitored and evaluated prior to confirming your services with the Company.
6. The terms of this Offer Letter are valid for seven (7) days from the date of this letter. If we do not receive your acceptance of this offer, the terms of this letter and this offer will be deemed to have been rejected by you unless otherwise communicated to you by the Company in writing.
7. Please provide all the documentation as listed in Annexure II, on or before joining the Company.
8. To indicate your acceptance of this Offer Letter, please sign and return a duplicate copy of this letter.

We look forward to hear from you regarding your decision to join Aquity Solutions. You are expected to keep this offer strictly confidential. In case, you have anything you would like to discuss further, please feel free to get back to us on the same.

We wish you a successful career and look forward to your joining us.

Provisional Offer Letter for Fixed Term Contract

We are pleased to offer you employment in our organization at Randstad India Pvt. Ltd as **Senior Research Analyst**. Your services are being deputed to **Excelra Knowledge Solutions Private Limited** on the following terms and conditions:

- Your employment will be valid from **04/08/2023 To 03/08/2024** , unless and until it is specifically extended in writing by Randstad India Pvt Ltd.
- Your Salary Gross will be **INR 294,404.00 per Annum** (as per Annexure 1) and will be paid out basis your actual joining date.
- Your employment is subject to completing our onboarding process, which requires you to :
 - a. Complete on the Randstad portal:
 - Employee profile form
 - Statutory Nomination forms like ESIC, PF, Mediclaim etc.
 - b. Upload proofs of your documents:
 - Government mandated ID proof: Aadhar Card and PAN
 - Address Proof (Any one): Voters ID, Passport, Driving License, Ration Card etc.
 - Copy of both Educational certificates & Previous employment documents.
 - Bank Details for Salary processing: Copy of cancelled cheque.

Please note that this is only a provisional offer of employment for a fixed term and is not to be construed as an appointment letter. A detailed appointment letter would be issued to you once you fulfill our employment terms and conditions & upon confirmation of joining duty by the manager.

The next step is for you to log into Randstad Direct, our employee portal to accept this offer. You will soon receive an email and SMS on your registered number with a link to the online portal and your OTP to login. A User guide is also available to help you complete formalities on/before your DOJ.

Please get in touch with us for any queries.
Wishing you the very best!

Yours truly,
For Randstad India Pvt Ltd.

2022-2023

Dear Sumaiya Saleem,

Congratulations! It is our pleasure to offer you admission to the Master of Science in Regulatory Affairs program in the College of Professional Studies. We are excited for you to begin your studies in the Winter 2024 term at the Toronto campus.

The Admissions Committee was impressed with your academic and personal achievements and believes you will make an excellent contribution to the program. We have confidence in your future success and look forward to embarking on this journey with you.

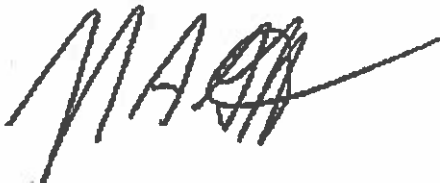

To secure your place, please visit your [applicant portal](#) to complete your enrollment form and submit your tuition deposit as indicated by **October 1, 2023**.

ABOUT THE COLLEGE OF PROFESSIONAL STUDIES

The College of Professional Studies offers innovative, experience-driven programs designed to meet the needs of motivated learners like you. We offer more than 70 graduate programs for in-demand degrees, including certificates, professional master's, and doctoral programs. Our programs are focused on industry-aligned curriculums and career preparedness so you can achieve your professional and personal goals and thrive. If you have questions regarding this admission offer, registration, curriculum, or other aspects of your enrollment, we are here to help. You will find our direct contact information listed on your [applicant portal](#).

We look forward to welcoming you to the Northeastern University community.

Sincerely,

Joseph Griffin, D.Min., PMP®

Dear Sri Lakshmi,

Congratulations! It is our pleasure to offer you admission to the Master of Science in Regulatory Affairs program in the College of Professional Studies. We are excited for you to begin your studies in the Winter 2024 term at the Boston campus.

The Admissions Committee was impressed with your academic and personal achievements and believes you will make an excellent contribution to the program. We have confidence in your future success and look forward to embarking on this journey with you.

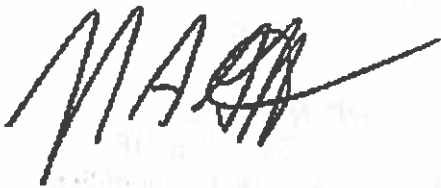

To secure your place, please visit your [applicant portal](#) to complete your enrollment form and submit your tuition deposit as indicated by **February 19, 2024**.

ABOUT THE COLLEGE OF PROFESSIONAL STUDIES

The College of Professional Studies offers innovative, experience-driven programs designed to meet the needs of motivated learners like you. We offer more than 70 graduate programs for in-demand degrees, including certificates, professional master's, and doctoral programs. Our programs are focused on industry-aligned curriculums and career preparedness so you can achieve your professional and personal goals and thrive. If you have questions regarding this admission offer, registration, curriculum, or other aspects of your enrollment, we are here to help. You will find our direct contact information listed on your [applicant portal](#).

We look forward to welcoming you to the Northeastern University community.

Sincerely,

Joseph Griffin, D.Min., PMP®

Dear Vineela Jonnalagadda,

Congratulations! You have been admitted to the Information Science program. The University of North Texas provides an exciting place to pursue your graduate education, and we are committed to your success. At UNT you will find the education and support you need to realize your goals and expand your horizons.

Successful Completion

You are now eligible to register during your upcoming enrollment period. Please visit your student portal at my.unt.edu for important information about enrollment dates, registration and class schedules.

F-1, F-2, and J-1 International students must confirm enrollment requirements based on their visa type, and must complete their immigration document check in with the International Student & Scholar Services office after arrival in the U.S. For questions about enrollment requirements based on your student immigration status, please visit the International Student & Scholar Services website at international.unt.edu.

I look forward to having you as a graduate student at UNT, as you join the excitement of discovering real solutions, creating new opportunities and making a difference in the world. At UNT, we expect you to pursue academic excellence in a rigorous, yet caring environment. [The Graduate Student Support Services](#) office provides a wealth of information to facilitate your smooth and successful transition to UNT. Please contact us if you have any questions about making the most of your graduate education.

Sincerely,

October 19, 2023

Dear VINEELA,

It is my pleasure to offer you admission to the University of Maryland, Baltimore County (UMBC) Graduate School as a graduate student in the **Health Information Technology** program for the **Spring 2024** semester. You are now eligible to take courses at UMBC towards the completion of your program. We were impressed with your qualifications, and hope you will find graduate education here both challenging and rewarding.

Please indicate whether you accept this offer by logging in to your myUMBC account. Accepting your admission is required before you are able to register for classes. To activate your account, please visit <https://my.umbc.edu/account> then click the "Create my Account" link. Activating your account requires your date of birth and UMBC Campus ID.

Your Campus ID is: **QX81737**

You **may** be required to pay a deposit after you accept your admission. This deposit will be a credit to your tuition bill and is not an extra fee. However, you will be required to pay this deposit before you are able to register for classes.

You will be contacted by your Graduate Program Director or Program Coordinator regarding program-specific orientation and academic advisement for your first semester's course selection. If you are subject to prerequisites or other terms of admission, the department will notify you directly. The Graduate School Catalog, Schedule of Classes, Policies and Procedures are available on our website at <https://gradschool.umbc.edu/>, some helpful resources for new students are listed at <https://gradschool.umbc.edu/students/checklist/>.

PRINCIPAL
VIJAYA INSTITUTE OF
PHARMACEUTICAL SCIENCES FOR WOMEN
ENIKEPADU, VIJAYAWADA 521 105

UMBC's International Student and Scholar Services (ISSS) will issue you the appropriate document to apply for a U.S. visa after you submit evidence of your financial support. If you have additional questions about this process, please contact the ISSS office using their website.

Please review the Mandatory UMBC Health Form, which must be completed and returned to University Health Services with documentation of all required immunizations before you may register for your second term at UMBC. The form is available at <https://health.umbc.edu/health-services/health-requirements/>.

Residential Life may provide temporary housing accommodations to UMBC graduate students who will be participating in campus orientation programs. Please be aware that temporary housing is available on a limited basis and is not guaranteed. For more information about registration, availability and costs, please contact Residential Life at reslife@umbc.edu.

If you have other questions or need assistance, please contact the staff of the Graduate School at 410-455-2537 or gradschool@umbc.edu. Congratulations on your acceptance and best wishes in your academic pursuits.

Sincerely yours,

K. Jill Barr J.D., M.Ed.
Associate Vice Provost, Graduate Education
Senior Assistant Dean, Graduate Enrollment Management

Sacred Heart UNIVERSITY

INTERNATIONAL ADMISSIONS

August 12, 2023

Dear Vincela Jonnalagadda,

Congratulations! The Admissions Committee for the Graduate Program in MS in Healthcare Informatics program has completed its review of your academic credentials. Based on these assessments and the conclusions of the Committee, I am pleased to offer you admission to the Sacred Heart University class entering in the Spring 2024 term.

Your student ID is 0940927. Please keep this for your records.

Your admission status is: **Admit**

Any pre-requisite coursework or conditions of your acceptance, if required, is specified here:

The competition for admission was particularly rigorous this year. We were impressed by your academic achievements and believe strongly in your potential for continued success. A mandatory orientation is scheduled approximately one week prior to the start of your program. Please pay close attention to your email address on file (jonnalagaddavincela@gmail.com) as you will be receiving several detailed emails explaining the costs of your program, important dates to remember, an explanation of conditions of your acceptance (if any), and detailed next steps to receive your I-20. Briefly, your next steps include:

1. Pay your enrollment deposit (this is required to issue the I-20)
2. Have your I-20 emailed/shipped from Sacred Heart University
3. Schedule and prepare for your visa interview
4. Secure your visa
5. Prepare your health immunization records
6. Register for classes
7. Register for orientation
8. Book travel to Sacred Heart University

Sacred Heart University holds students to the highest level of academic integrity, and conducts regular audits of academic documents (such as transcripts, exam scores, etc.). If any documents are found to have been falsified or altered in any way, your acceptance will be automatically terminated and you may be reported to US immigration officials.

As a graduate student at Sacred Heart University, you will be subject to all academic standards and regulations and to the program guidelines in effect for the semester applicable at the time of this acceptance. Furthermore, as an international student, and in accordance with Immigration and Customs Enforcement (ICE) regulations, you are required to maintain continuous, full-time enrollment. Failure to do so may invalidate your student status here at Sacred Heart University, your legality as a visitor to the United States, and consequently subject you to the appropriate ICE repatriation laws. Please refer to our official Graduate Catalog for the complete policy governing full-time status for international students. Please note, that it is a requirement of Sacred Heart University that all graduate students maintain a minimum cumulative GPA of 3.0.

Finally, please accept my congratulations on your successful application. You are about to embark on an exciting, challenging and rewarding professional educational experience. We look forward to welcoming you to the Sacred Heart University campus community and to our graduate program.

With warm wishes,

Cori Nevers

SAINT LOUIS
UNIVERSITY

Vineela,

Congratulations! I am pleased to inform you that you have been **admitted** to the **Health Data Science (MS) - at Saint Louis** program at Saint Louis University for **Spring 2024**. To help clarify the terms of your admission and for additional information, please do not hesitate to contact your [program](#).

The following are your admission provisions:

- Official test score(s)
- Official transcript indicating degree conferral

Your personalized SLU application portal will provide you with detailed information about your next steps and confirming your enrollment. Please note that your official offer of admission is contingent upon receipt of your official final transcript(s), reflecting successful completion of all graduation requirements.

SLU is committed to providing you with an education that is both challenging and rewarding to prepare you for your chosen career. I am confident you will find this journey to be an enriching and truly transformative experience.

Congratulations again on your admission to the Health Data Science (MS) - at Saint Louis program. I welcome you to the Saint Louis University community.

Sincerely,

DESIGN, SYNTHESIS, CHARACTERIZATION, MOLECULAR DOCKING STUDIES AND BIOLOGICAL ACTIVITY OF NOVEL QUINAZOLINONE DERIVATIVES AS POTENTIAL EGFR INHIBITORS

A.Jyothsna^{1*}, K. Padma Latha²

Abstract:

A series of novel quinazolinone derivatives (II-(3a-3j)) [(E)-7-chloro-2-(4-((4-substituted benzylidene) amino) phenyl) quinazolin- 4(3H)-one] were synthesised, characterized and biological screened for their in vitro antibacterial, anthelmintic and anticancer activity. All compounds, were synthesized through two steps process and structurally conformed by FTIR, ¹HNMR and Mass spectroscopy. Their anticancer activity was assessed using MTT method against MCF-7 and SKOV3 cell lines, the anthelmintic activity was carried out by using Indian Earth worms and the antibacterial activity was carried out by Cup-plate diffusion method. In addition, molecular docking studies was assessed using Autodock Vina. The compound II-3c (IC₅₀ value of 23.24µg against MCF-7 and 21.05µg against SKVO3) exhibited good anticancer activity compared with Doxorubicin as standard. In anthelmintic and antibacterial screening, the compounds, II-3c, II-3h and II-3j have shown excellent anthelmintic activity and compounds II-3b, II-3d, II-3f, II-3h and II-3j showed significant antibacterial activity.

Key Words: Quinolone, Anticancer, antibacterial and anthelmintic activities, Molecular Docking, MCF-7 and SKOV3 cell lines.

Abstract

A series of some novel quinazolinone derivatives III-3(a-j) were synthesized by a conventional method via cyclization and Schiff's base mechanism. All the synthesized compounds gave a good yield between 78-86%. Final structure was confirmed by FT-IR, LC-MASS and ¹H NMR analytical data. The novel Quinazolinone derivatives (III-3a-3j) are screened for anticancer activity against MCF-7, SKVO3 Cell lines by MTT assay method. From the resulting data, the compound III-3i (IC₅₀ value of 0.035 μM against MCF-7 and 0.1 μM against SKVO3) exhibited good anticancer activity compared with Doxorubicin as standard. The molecular docking studies of these novel Quinazolinone showed good agreement with the biological results their binding pattern and affinity towards the active site of EGFR was examination.

Keywords

Quinazoline, Molecular Docking, Anti-cancer activity, MCF-7 and SKVO3 Cell lines, Doxorubicin.

INTRODUCTION:

In synthetic chemistry conventional method plays a vital role in the progress of chemical science. Hybridization of bioactive natural and synthetic compounds is one of the most promising novel approaches for the design of hit and lead compounds with new molecular structures. Design of new drug-like small molecules based on the pharmacologically active scaffolds is a rational and a promising direction in modern medicinal chemistry. A number of compounds have been synthesized by the combination of biologically active pharmacophores and utilized by medicinal chemists to develop novel therapeutics agents with a broad range of pharmacological activities (1-5). Some Quinazolinone conjugates showed remarkable anticancer activity with 50% growth inhibition (GI50) values of 0.02 μM and 0.49 μM against central nervous system (SNB-75) and leukemia (K-562) cell lines, respectively (6).

heterocyclic compounds with five-membered rings bearing both sulphur and nitrogen atoms are privileged essential organic structural scaffolds in compounds used as medicinal drugs [7-9]. Due to their high potency and efficacy towards therapeutic properties, tremendous efforts have been to novel quinazolinone bearing derivatives. All these structural motifs are having numerous therapeutic properties such as anti-inflammatory, antihypertensive α-blocking, anti-leishmanial, neuroprotective agents in Parkinson's and Alzheimer's disease [10-12]. The quinazolinone ring systems is a beneficial structural element in medicinal chemistry and has wide-ranging application in the drug development process. Among the different Schiff's bases linked with other hetero nucleus compounds known in the literature for their potent biological active compounds with a very wide range of therapeutic properties

ANTIBACTERIAL AND ANTIFUNGAL ACTIVITY OF CRUCIFEROUS VEGETABLES - CAULIFLOWER, BROCCOLI

SUNDAR S*, JAYARAMI REDDY A

ABSTRACT

Objectives: This work aims to analyze the antibacterial and antifungal activities of cruciferous vegetables such as cauliflower and broccoli.

Methods: Cruciferous vegetables act as a good source of natural antioxidants due to their high levels of carotenoids, tocopherols, and ascorbic acid. In this study, two cruciferous vegetables, such as cauliflower and broccoli, were selected for antibacterial and anti-fungal studies. The stems, flowers of cauliflower, and broccoli were extracted with 125 mL of ethanol and water by Soxhlet's apparatus for 6 h. Mueller Hinton agar and Sabouraud's dextrose agar medium were used for antibacterial and antifungal activity, respectively. The antibacterial and antifungal activities of each cauliflower, broccoli stem, and flower extract were determined using a modified Kirby-Bauer disk diffusion method. Standard antibiotics, gentamicin (25 µg/mL), and fluconazole (25 µg/mL) served as positive controls for antibacterial and antifungal activity, respectively.

Results: Broccoli stem (100 µg/mL) ethanol extract produced higher antibacterial activity (13 mm) against *Escherichia coli*. Cauliflower, flower (100 µg/mL) ethanol extract produced higher antibacterial activity (13 mm) against *Staphylococcus aureus*. Broccoli flower (100 µg/mL) ethanol extract produced higher antifungal activity (14 mm) against *Candida albicans*. According to the results obtained from this project, broccoli stems and flower ethanol extracts show very good antibacterial activity against Gram-negative microorganisms such as *E. coli* and *Pseudomonas aeruginosa*. Similarly, cauliflower, flower ethanol extract shows excellent antibacterial activity against Gram-positive microorganisms such as *Bacillus subtilis* and *S. aureus*.

Conclusion: Further analysis is recommended for the identification of active constituents responsible for these activities.

Keywords: Cruciferous vegetables, Antibacterial, Antifungal, Agar disk diffusion.

INTRODUCTION

The popularity and consumption of vegetables from *Brassica* species are increasing because of their nutritional value. *Brassica* crops are used to reduce the risk of chronic diseases, including cancer and cardiovascular diseases. *Brassica* foods provide nutrients and health-promoting phytochemicals such as minerals, vitamins, carotenoids, soluble sugars, fiber, phenolic compounds, and glucosinolates [5]. Brassicaceae family vegetables are important sources of phenolic compounds in the human diet. They also contain derivatives of hydroxycinnamic, caffeic, chlorogenic, and ferulic acids, as well as flavonols (kaempferol derivatives, and quercetin derivatives), and anthocyanins (red cabbage) [6,7].

Cruciferous vegetables such as cauliflower, broccoli, cabbage, mustard, Chinese cabbage, carrot, Chinese kale, and turnip are edible plants that are low in calories, high in fiber, rich in vitamins and minerals, and have physiologic effects on humans [8]. Some important enzymes such as chitinase, glutathione transferase, and epoxide hydrolase are also found in cruciferous vegetables [9,10]. Indole and isothiocyanate, enzymatic products of myrosinase from glucosinolate found in cauliflower and cabbage, lower the incidence of tumor formation and have an antioxidative effect [11].

Broccoli is the richest source of different minerals, vitamins, and fiber. Broccoli contains potent antioxidants that support healthy cells and tissues in our body. Broccoli contains multiple active constituents that are responsible for an anti-inflammatory effect in animals. Multiple studies have shown that broccoli may have a cancer-preventive effect. Intake of broccoli may decrease blood sugar levels and control diabetes. This is due to its antioxidant and fiber content. Broccoli may help to reduce risk factors for various heart diseases and is used to prevent

heart tissue damage. Broccoli contains Vitamin C, which is used to support a healthy immune response.

MATERIALS AND METHODS

Materials

Plant materials

The stems and flowers of cauliflower and broccoli used in this work were purchased in and around Vijayawada.

The common pathogenic microorganisms

The common pathogenic six microorganisms were used in this study, among these, two Gram-negative microorganisms, namely, *Escherichia coli* (National Collection of Industrial Microorganisms [NCIM] 2256), *Pseudomonas aeruginosa* (NCIM 2037), and two Gram-positive microorganisms, namely, *Bacillus subtilis* (NCIM 2710) and *Staphylococcus aureus* (NCIM 2794). All the tested strains were collected from the NCIM. Two other fungal organisms were also used in this study, namely, *Aspergillus niger* (ATCC 6275) and *Candida albicans* (ATCC 2091).

Instruments

The instruments used for this work are the Soxhlet apparatus, incubator (37°C), refrigerator (4–18°C), laminar airflow system, autoclave, hot oven, precision electronic balance, grinder, micropipette (100–1000 µL), Bunsen burner, matches, and inoculating loop.

Chemicals

The chemicals used for this work are ethanol (research lab fine chemical industrial), dimethyl sulfoxide (DMSO) (research lab fine

TOXICITY ASSESSMENT AND EPIDEMIOLOGICAL STUDIES OF CHEMICAL SUBSTANCES – AN OVERVIEW

Sashanka Karuparthi, S. Sundar, K. Padmalatha, Sravanthi Yerreddu,

Mounika Peram, Sowmya Rebba,

Department of Pharmacology, Vijaya Institute of Pharmaceutical Sciences for Women,
Enikepadu, Vijayawada, NTR District, Andhra Pradesh, India.**Abstract:**

Humans are exposed to many chemicals on daily basis but mostly toxicity obtained from single chemical exposure. Many factors are to be considered such as duration, route, frequency, timing of exposure, concentration while determining toxicity. To better understand the toxicity of chemical mixtures, a proper model system is essential. Shortcoming model systems are facing difficulties to find out appropriate balance of rigor and reproducibility in mixture toxicity studies. Certain questions will arise while comparing single to mixture toxicity. The most sensitive cases where toxicity leads to occur at lower doses is called as critical effect. They are based on the synergism, additivity, antagonism and potentiation. For toxicity evaluation to be more accurate, dose or concentration relevance should be considered and be below the threshold. Previously the work on chemical substances is done by the technology and methodology of the time but the recent studies are based on the progress of chemical substances in the mixture toxicology studies. Epidemiological risk assessment test are based on the chemical analytical tests. The evaluation of chemical substance is done by the quantitative or qualitative results. Amount of dose that is given to particular individual should be known for the study during exposure. This review consists of methods to determine the toxicity of using certain chemical substances and their epidemiological studies and functioning of chemical substances on human organs.

Keywords: Toxicity, Chemicals, Dose, Synergism, Antagonism.

Article Received on 24/11/2022 Article Revised on 14/12/2022 Article Accepted on 03/01/2023

ABSTRACT
The process of replacing a cell, organ, or tissue with a healthy counterpart is known as transplantation. Every year, hundreds of organs, tissues, and cells are transplanted throughout the world. Human immunological reactions to the graft are the main obstacle to the transplantation of organs, tissues, and cells. The transplant will be rejected if the recipient's immune system rejects it because it is foreign. Recipients of immunosuppressive medications have an increased risk of infection and cancer because the drugs non-specific immune system inhibition. Longer transplant longevity is promised by new techniques being developed to induce particular tolerance to the graft without dampening other host immune responses. More transplant recipients are put on a lifelong combination immunological medication or steroid therapy to prevent graft rejection. Despite its toxicity and side effects, this medication does not work to stop chronic graft rejection. Additionally, immune suppressive drugs non-specifically weaken the immune system, increasing the risk of infections and cancer in their users. Longer transplant longevity is promised by new techniques being developed to induce particular tolerance to the graft without dampening other host immune responses. To keep improving transplant immunology, immunosuppression will require ongoing critical approaches, review, and customization. Additionally, longer-term immunosuppression-related comorbidities, primarily chronic kidney disease (CKD) and cancer, have increased as a result of improved survival after lung transplantation, necessitating more sophisticated management strategies.

KEYWORDS: Graft, Transplant, Donor, Recipient, Immune system, Hemopoietic system.

INTRODUCTION

Transplantation is the process of moving cells, tissues, or organs, from one site to another, either within the same person or between a donor and a recipient. If an organ system fails, or becomes damaged as a consequence of disease or injury, it can be replaced with a healthy organ or tissue from a donor. Organ transplantation is a major operation and is only offered when all other treatment options have failed. Consequently, it is often a life-saving intervention. In 2015/16, 4,601 patient lives were saved or improved in the UK by an organ transplant. Kidney transplants are the most common organ transplanted on the NHS in the UK (3,265 in 2015/16), followed by the liver (925), and pancreas (230). In addition, a total of 383 combined heart and lung transplants were performed, while in 2015/16.

though most commonly for blood or bone marrow cancers such as leukemia and lymphoma, around 3,600 HSCT transplants were undertaken in 2012. The immune system plays a critical role in transplantation.

To reduce the possibility of rejection, the donor and recipient are carefully matched for immune compatibility prior to transplantation. However, the small pool of eligible donors can make it difficult to find a donor-recipient match and there will always be a degree of rejection against the graft.

There are various methods for tissue and organ transplantation:

Autograft
The transfer of cells, tissues, or organs from one part of the same person to another. Like a skin transplant.

Allograft
An allograft is when organs or tissues from a donor are transplanted into a non-genetically similar member of the same species. The most typical type of transplant is an allograft.

ABSTRACT:

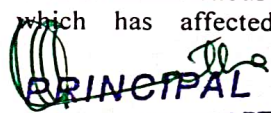

Aim: The contagious disease COVID 19 is a recently out-broken pandemic situation which threatens humankind all over the world. Siddha system of medicine is one of the traditional medical systems of India, which has provided a novel remedy for many epidemics like Dengue, Chicken guinea earlier. On evaluating the literature evidence and considering the mortality and severity of the disease, we have attempted to identify the possible inhibition of viral replication by "Karisalai Chooranam" - a polyherbal Siddha formulation which contains herbs like Karisalai (*Wedelia chinensis*), Thoodhuvelai (*Solanum trilobatum*), Musumusukai (*Melothria maderaspatana*) and Seeragam (*Cuminum cyminum*). The aim of this study was to identify the bioactive components present in Karisalai chooranam and pin down the components that inhibit COVID 19 protease by In Silico molecular docking analysis. **Material and methods:** The study was performed for the active compounds present in the herbs (*Wedelia chinensis* - Benzoic acid, *Solanum trilobatum*- Disogenin, *Melothria maderaspatana*- β -sitosterol, *Cuminum cyminum L*- Coumaric acid and Limonene) with three potential targets, PDB id: 6LU7 3-chymotrypsin-like protease (3CLpro), PDB id: 6-NUR RNA dependent RNA polymerase and PDB id: 2AJF Angiotensin-converting enzyme II (ACE2) receptor using Autodock Vina. **Key findings:** The active phytocomponents present in "Karisalai chooranam" was found to inhibit the target 3CL proenzyme and hereby halt the formation of 16 non-structural proteins (nsp1-nsp16) that are highly essential for viral replication and there by prevents viral survival in the host environment. The phytocomponents also inhibited the target RNA dependent RNA polymerase (PDB)-6NUR RdRp which possess versatile action in mediating nonstructural protein (nsp 12) essential for viral replication. A significant binding against the target Angiotensin-converting enzyme II (ACE2) receptors - PDB- 2AJF was found which was recognized as a binding site for novel coronavirus to cause its pathogenesis. Among the five active components present in the herb, the binding ability of Disogenin and β -sitosterol with COVID19 protease suggests a possible mechanism of protease inhibition and thus preventing viral replication. **Significance:** The results strongly suggest that phytocomponents of "Karisalai chooranam" may act as a potential therapeutic agent for the management of COVID-19 and related symptoms. Further, the efficacy of the active compounds should be tested in vitro before being recommended as a drug.

ABSTRACT

Thalidomide entered the market as a sedative and used widely all over the world by pregnant women because of its effective action as an anti-emetic in morning sickness. After knowing that thalidomide exhibits teratogenicity in pregnant women its use was reduced at first and gradually banned world widely by its effect on newborn children with abnormalities. After several decades even after knowing the impact of thalidomide, it re-emerged into the market as a novel and highly effective agent in the treatment of various inflammatory and malignant diseases. In the year 2006, its renewal had got a proof to be used in the market that is used to treat plasma cell myeloma. Related drug lenalidomide is used for hematological malignancies. Even though using the drug due to its tragic past it stimulated the FDA to keep an eye on its use worldwide. By reviewing recent clinical trials finally

selected medical indications for the drug thalidomide with a focus on haematologic malignancies. It was unclear how thalidomide caused the teratogenic defect in the embryo. But thalidomide regained a second life and used in plasma cell myeloma when the mechanism of action was studied and better understood. Research on the mechanism of action of thalidomide is leading to a better understanding of these molecules transits, safe drugs may be designed.

KEYWORDS: Teratogenicity, Antiemetic, Sedative, Anti-tumour, Anti-inflammatory.

INTRODUCTION

Thalidomide is a drug that was developed in the late 1950s. Chemical formula is $C_{13}H_{10}N_2O_4$. The class belongs to "Immune modulatory agents". Since, from the year of development of

ABSTRACT

Dengue virus infection is the most widespread mosquito-borne viral infection in humans and has emerged as a serious global health challenge. In the absence of effective treatment and vaccine, host factors including nutritional status, which may alter disease progression, need investigation. The interplay between nutrition and other infections is well-established, and modulation of nutritional status often presents a simple low-cost method of interrupting transmission, reducing susceptibility, and/or ameliorating disease severity. This review examines the evidence on the role of micronutrients in dengue virus infection. We found critical issues and often inconsistent results across studies; this finding along with the lack of sufficient literature in this field have limited our ability to make any recommendations. However, vitamins D and E have shown promise in small supplementation trials. In summary, the role of micronutrients in dengue virus infection is an exciting research area and needs to be examined in well-designed studies with larger samples. Dengue is life threatening. It is critical to triage patients with dengue infection in the early stage. However, there is limited knowledge on early indicators of Severe dengue. The objective of this study is to identify risk factors for the prognosis of Severe dengue and try to find out some potential predictive factors for Severe dengue from dengue fever in the early of infection.

Keywords: Dengue fever, Hemorrhage, Thrombocytopenia, Vitamin E, Vitamin C

INTRODUCTION

Dengue fever is a viral disease caused by dengue virus that belongs to the genus *Flavi virus* in the family *Flaviviridae*. The virus is transferred to humans mostly by the bite of female mosquito *Aedes aegypti*. Dengue virus (DENV) is a single-stranded RNA virus with a genetic makeup of about 11,000 nucleotides in length. Dengue fever is caused by IV antigenically related but genetically distinctive viruses (DEN I-IV), and all IV serotypes usually result in mild febrile sickness which probably develops to dengue shock syndrome and dengue hemorrhagic fever (DHF). Dengue virus infection is an illness with a wide clinical picture ranging from asymptomatic to an undifferentiated fever to the more serious form of Thrombocytopenia and plasma leakage are important complications of dengue fever infection, which results to disturbance in thrombopoiesis and increased destruction of platelets in circulation.

Bone marrow has a significant role in the suppression of hematopoietic system and inducing thrombocytopenia occurred during dengue viral infection. TPO (thrombopoietin) is the main regulatory hormone maintaining the adequate count of thrombocytes and megakaryocytes in circulation. A significant increase in TPO level has been found in patients with low circulating levels of megakaryocytes and platelets¹. Angiotensinogen is a glycoprotein, produced by the liver and released into the circulation. Due to lowered blood pressure, angiotensinogen is acted upon by renin and then converted into angiotensinogen-I which is further converted into angiotensin-II, a physiologically active form of renin angiotensin system and have a vasoconstriction effect regulating the fluid volume and mineral balance in body fluids. Vitamin D3 plays an important role in mediating the immune system. It increases the phagocytic capacity

ABSTRACT:

Milk contains whole nutrients and is consumed by the majority of population in the form of drinking as well as dietary products. Milk adulteration is one of the most common phenomena, this milk adulteration can be over looked in many countries. it shows serious health hazards leading to fatal diseases. Milk adulterants have been reported globally by adding various instances such as adding water, whey proteins, melamine, urea, detergents, starch hydrogen peroxide, boric acid. This paper presents a detailed review of common milk adulterants as well as different methods such as the chromatographic methods such as HPLC and GC coupled with mass spectrometry to detect the adulterants in milk, and immunological techniques such as ELISA and various DNA based procedures like PCR have also been used to detect the adulterants both qualitatively and quantitatively. This study is organized to be an adulterants-based study instead of a techniques-based one, where qualitative detection for most of the common adulterants are enlisted and quantitative detection methods are limited to a few major adulterants of milk. Apart from regular techniques, recent development in these detection techniques has also been reported. Nowadays milk is being adulterated in more sophisticated ways that demand for cutting-edge research for the detection of adulterants. This review intends to contribute towards the common knowledge base regarding possible milk adulterants and their detection techniques.

KEYWORDS: Milk Processing, Adulteration, Product Safety, ELISA, PCR.

INTRODUCTION:

Milk is a whitish liquid, it is rich in its nutritive value, and it contains carbohydrates, vitamins, minerals, and fats. It is obtained from the mammary glands of female mature animals. Milk obtained from female animals is used for human consumption. The nutritional quality of milk is used for preparing desired food items for humans and young animals too. Milk contains many proteins which may improve the growth of adults and infants.

Adulteration of milk is an act, adulteration in milk is done intentionally for improving the quantity, offering for sale either by admixture, substituting of other substances [or] by withdrawing some ingredients in the milk mostly adulteration in milk is done intentionally to earn more capital by adding of some of the adulterants like water, starch, detergents, gelatin, urea, cane sugar, colostrum, etc. Adulteration can also occur unintentionally by naturally like dust particles and rodent dropping, pesticides, antibiotics, etc. However, the history of milk adulteration is old. Milk adulteration came into global concern after the breakthrough of melamine contamination in Chinese infants' milk products in 2008 (1). Swill milk scandal is a major adulterant it has been reported in 1850s which killed 8000 infants in New York alone (2). Milk is an ideal food for humans and animals because of its high nutritive value, but unfortunately, milk is being

Abstract

One of its most popular and usual techniques for administering drugs is still oral delivery. Traditional solid dose forms, such as pills and capsules, provide problems, particularly for elderly patients, children, and those who have trouble ingesting. Orally dissolving Film (ODFs) have become a unique and promising medication delivery method to get around these restrictions in recent years. ODFs are a great alternative for individuals whom struggle to consume traditional medications since they are flexible, thin, and quickly dissolving films that may be applied to the mouth or oral cavity with out the need of fluids. This review seeks to give an summary of oral dissolving films, containing information on their composition, production processes, and prospective medicinal uses. ODFs can be produced using methods including lyophilization process hot-melted extrusions, and cast in solvent, all of which are relatively straightforward procedures. These techniques guarantee accurate dosage and reproducible quality, solving significant issues with drug administration. It will also discuss the benefits and challenges of creating ODF, such as stiffness, scale-up production, and taste masking, as well as exactly how continuous technical advancements are addressing these problems. In conclusion but not the least, oral dissolving film are an innovative method of drug delivery which have an opportunity to revolutionise the pharmaceutical industry. Due to their ability to increase patient compliance and their ability to adapt in formulation and production, ODFs are positioned as a viable option for a variety of therapeutic applications.

INTRODUCTION

Despite the significant developments in medication delivery technologies, capsules and tablets are still the most popular dosage forms (Samita Gauri, *et al.*, 2012). However, they are now constrained by a variety of issues, such as elderly and children's concerns about swallowing and swelling (Subash Vijaya Kumar, *et al.*, 2010). The fast dissolving drug delivery system (FDDS) came into existence in late 1970 as an alternative to conventional pills, capsules, and syrups for old and young patients with dysphasia. Fast dissolving tablets are a type of solid dosage form that dissolve quickly and without liquid in the mouth (Arunachalam A, *et al.*, 2010). Due to their brittleness, OFDF can occasionally be challenging to transport, store, and handle.

Abstract

Poor aqueous solubility is a significant challenge in the formulation and delivery of many pharmaceutical compounds, leading to suboptimal bioavailability and therapeutic efficacy. Nanocrystals have emerged as a promising approach to address this issue by enhancing drug dissolution and improving drug delivery systems. This review provides an in-depth analysis of the role of nanocrystals in enhancing drug dissolution and their potential as a tool for improving drug formulations and explaining the principles of nanocrystal technology, including the media milling, preparation method and homogenization method, and the use of stabilizers and surfactants to prevent aggregation. The applications of nanocrystals in different drug delivery systems are explored, including oral, parenteral, and topical routes. In conclusion, nanocrystals represent a powerful tool for enhancing drug dissolution and improving drug delivery systems for poorly water-soluble drugs. Their ability to enhance bioavailability and therapeutic efficacy holds great promise for advancing pharmaceutical development.

Key Words: Nanocrystals, Dissolution, Stabilizers and Bioavailability.

INTRODUCTION

It is believed that 40% or more of active compounds found by combinatorial screening techniques have poor water solubility. Poor solubility is a barrier for screening novel compounds for pharmacological activity at the very beginning, as well as throughout formulation development and clinical testing. This indicates that smart technological formulation techniques are definitely needed to enhance the bioavailability of these inadequately soluble drugs. The term "making such drugs bioavailable" refers to their ability to be administered intravenously or orally with a suitable level of absorption.⁽¹⁾ A number of techniques have been utilized for quite some time to improve drug solubility. These include solubilization by surfactants, complex formation (e.g., cyclodextrin, macromolecules), self-emulsifying drug delivery systems (SEDDS), microemulsions, and, most importantly for oral administration, micronization of drug powders.⁽²⁾ The term "micronization" refers to the process of reducing drug powders to an average particle size of 1–10 μ m. However, many modern pharmaceuticals are notoriously weakly soluble,

Abstract

Wound healing is a complex and dynamic process involving various cellular and biochemical events. Over the years, researchers have explored innovative approaches to enhance wound healing and reduce the associated complications. One such promising advancement is the utilization of topical nanoemulgels, a combination of nanoemulsion and hydrogel, for promoting wound healing. This review systematically examines the various formulation components and techniques employed in the preparation of nanoemulgels, emphasizing their role in optimizing drug delivery to the wound site. Special emphasis is placed on the role of surfactants, co-surfactants, and polymers in optimizing the formulation to achieve enhanced stability, drug loading capacity, and sustained release profiles. Furthermore, the physicochemical attributes of nanoemulgels, such as particle size, viscosity, and rheological behavior, are dissected in detail. The impact of these properties on drug release kinetics and skin permeation is expounded. Moreover, this review critically assesses the future perspectives and applications of topical nanoemulgels for wound healing applications. In conclusion, this review provides a comprehensive overview of the formulation and evaluation of topical nanoemulgels for wound healing. The integration of nanotechnology with wound care holds promise for revolutionizing treatment strategies, offering faster healing, reduced scarring, and improved overall patient outcomes. Nanoemulgels provides sustain release activity and may be useful in solving the limitations of conventional drug delivery system. Patient compliance will be more because topical administration of these nanoemulgels is less greasy, transparent and comfortably applied on the skin.

Key Words: Wound healing, Nanotechnology, Hydrogel and Sustained Release

INTRODUCTION

The restoration of normal function and structure following skin damage is facilitated by a dynamic and complicated biological process known as wound healing, which involves the coordinated activity of numerous cellular processes (Enung, S.A. *et al.*, 2014). Multiple processes, such as hemostasis, inflammation, proliferation, revascularization, and remodeling, work together to close open wounds and restore normal function (Landén, N.X. *et al.*, 2016). In order for wounds to heal correctly, these stages must occur in concert and at just the right intensity (Reinke, J. *et al.*, 2012). Since there aren't

ABSTRACT

Nanopharmaceutics, an evolving branch of nanotechnology, offers a revolutionary and innovative approach to drug delivery systems. Nanopharmaceutics offering promising solutions to the challenges faced by conventional pharmaceutical formulations. This review provides an overview of recent advancements in nanopharmaceutics, focusing on the potential benefits it brings to the field of drug delivery. Nanopharmaceutics employs nanotechnology-based platforms, such as liposomes, micelles, polymeric nanoparticles, and solid lipid nanoparticles, to encapsulate drugs at the nanoscale level. These nanocarriers, often ranging from 1 to 100 nanometers in size, can encapsulate therapeutic agents, including drugs and biological molecules, offering controlled release, improved solubility of poorly water-soluble drugs, improved bioavailability, and targeted delivery to specific tissues or cells. By facilitating site-specific drug delivery, nanopharmaceutics not only enhances therapeutic outcomes but also reduces drug doses, potentially leading to cost savings and improved patient compliance. The review also highlights various breakthroughs in nanopharmaceutics, such as novel nanoparticle synthesis methods, surface functionalization techniques, and controlled release strategies. Finally concludes by highlighting the promising prospects of nanopharmaceutics in transforming drug delivery systems. As research continues to advance in this field, nanopharmaceutics holds immense potential to revolutionize the treatment of various diseases, providing safer, more effective, and personalized therapies. This innovative approach has the potential to reshape the landscape of pharmaceutical development and improve patient outcomes across a wide range of medical conditions.

Keywords: Drug Delivery Systems, Liposomes, Polymeric Nanoparticles and Solid Lipid Nanoparticles.

INTRODUCTION

One of the most important technologies of this century is widely acknowledged to be nanotechnology. Science fields as diverse as biology, chemistry, physics, materials science, and engineering all make use of nanotechnology and nanoscience. They include working with and learning about extremely small objects. The capacity to recognize and exert control over specific molecules and atoms is at the heart of nanotechnology and nanoscience. This technology has the potential to make a substantial

ARTIFICIAL INTELLIGENCE AND TELIMEDICINE: AN EFFECTIVE DIGITALIZATION IN HEALTHCARE AND PHARMACEUTICAL SECTORS

S. Venkateswara Rao^{1*}, K. Sri Latha¹, K. Abinaya Purna¹, K. Padmalatha²

Abstract

The convergence of Artificial Intelligence (AI) and Telemedicine has ushered in a transformative era for the pharmaceutical sector. This review delves into the key aspects of this groundbreaking synergy, exploring the integration of AI technologies and telemedicine practices, and its profound impact on the pharmaceutical sector. The utilization of AI and telemedicine has redefined the landscape of patient care, drug development, conduct clinical trials, and overall healthcare management. In drug development, AI driven systems have transformed the traditional research and development process. Advanced AI algorithms analyze vast datasets to find drug targets, forecast interactions, and optimize clinical trials, thereby significantly reducing both the time and cost associated with bringing new pharmaceuticals to market. The digitalization of the pharmaceutical industry through AI and telemedicine has revolutionized the patient-doctor relationship. Telemedicine platforms powered by AI algorithms enable remote consultations, personalized treatment plans, and real-time health monitoring, transcending geographical barriers and improving access to medical expertise. The seamless integration of these technologies has not only enhanced patient engagement but has also expedited diagnostic accuracy, leading to early detection of diseases and improved health outcomes. While the benefits of AI and telemedicine integration in the pharmaceutical sector are extensive, several challenges and ethical considerations must be addressed. Ensuring data privacy, maintaining the security of patient information, and promoting regulatory compliance are critical factors to be carefully managed in this digitized landscape. In conclusion, the symbiosis of AI and telemedicine has revolutionized the pharmaceutical industry, shaping a future where patient-centric care, rapid drug development, and data-driven decision-making are the norm. Embracing this transformation not only promises enhanced healthcare outcomes but also paves the way for a more efficient, accessible, and innovative pharmaceutical sector.

Key Words: Artificial Intelligence (AI), Telemedicine, Drug development, Healthcare and Pharmaceutical sector.

EMERGING DEVELOPMENTS IN OCULAR DRUG DELIVERY SYSTEMS

S. Venkateswara Rao¹, P. Suma², S. Deepthi³, B. Mounika⁴, K. Padmalatha⁵

Abstract

The eye is a particularly safe organ due to its structure and function. A successful treatment for eye illnesses, especially those affecting the retina and optic nerve, has been viewed as an enormous challenge. Scientists have been pushed to develop novel modes of administration such as periocular channels due to the limitations of topical and intravitreal routes. Ocular medication delivery systems typically face difficulties with ocular barriers and active drug bioavailability. Microneedle, iontophoresis, dendrimers, and other applications of nanotechnology have showed promise in the treatment of ocular disorders. The development of novel delivery systems would benefit substantially from an improved knowledge of the causes, symptoms, and treatment of ocular illnesses. Future research and development efforts will focus heavily on creating non-invasive sustained medication release for treating both anterior and posterior segment eye problems.

Keywords: Ocular delivery systems, Periocular channels, Intravitreal routes, Novel delivery systems and Nanotechnology.

ABSTRACT:

Emulgel is one of the promising topical drug delivery system for the delivery of hydrophobic drugs which overcome a variety of disadvantages of ointments and creams like greasiness as well as phase inversion. The aim of present work was to develop and evaluate Oxiconazole emulgel. Oxiconazole emulgel was prepared by using polymers like Carbopol 934 and HPMC K4M at different concentrations. Oxiconazole is a broad spectrum anti-fungal agent used in treat of various skin infections such as athlete's foot, jock itch and ring worm. The prepared emulgels were evaluated in terms of physical appearance, measurement of pH, viscosity, spreadability, drug content and *in vitro* diffusion studies and skin irritation study. Formulation F1 containing carbapol 934 is considered as optimized formulation because it showed highest drug release i.e., 58.57% in 8 hrs.

KEYWORDS: Topical drug delivery, Emulgel, Oxiconazole, Carbapol 934, HPMC K4M, *In vitro* diffusion studies.

1. INTRODUCTION:

Emulgel are emulsions, either of the water-in-oil or oil-in-water type, which are gelled by mixing with a gelling agent. The emulsion also acts as controlled release drug delivery system in which drug particles entrapped in internal phase go through the external phase to the skin and slowly get absorbed^{1,2}.

Oxiconazole is used to treat skin infections such as athlete's foot, jock itch and ringworm. Oxiconazole possesses poor water solubility and highly hydrophobic in nature that lies in Biopharmaceutical classification system (BCS)-II class which pose problems in its delivery at the topical region, hence the formulation of Oxiconazole emulgel appeared to be a viable approach.

Literature on topical formulation of Oxiconazole is very less^{2,3}. But the marketed products include only the creams and lotions. Hence there is a scope for developing Oxiconazole emulgel formulation.

2. MATERIALS AND METHODS:

Materials:

Oxiconazole Nitrate was obtained as a gift sample from Metrochem API Private Limited, Hyderabad. Light liquid paraffin, Tween 80 and Cetostearyl alcohol were purchased from Sd Fine Chem Limited, Mumbai. Clove oil was purchased from Loba Cheme Pvt. Limited, Mumbai. Span 80 was purchased from Qualikems Fine Chem Pvt. Limited. Methyl paraben, Carbapol 934 and HPMC K4M were purchased from Rolex Chemical Industries, Mumbai. Benzoic acid, Gluteraldehyde, Potassium dihydrogen phosphate and Hydrochloric acid were purchased from Molychem, Mumbai. Ethanol and Methanol were purchased from Merck Company,

ABSTRACT:

Nasal drug delivery has got a great deal of attention as a convenient, reliable and potential method for the systemic administration of drugs. It is specially for those molecules which are ineffective orally and only effective if given by injection. The nasal route of drug delivery has advantages over the other alternative systems of non-invasive drug administration. Nasal route is advantageous for the drugs which are unstable on oral administration as they are much degraded in GIT or else metabolized by first pass effect in liver. Nasal route is alternative to parenteral therapy and as well helpful for long term therapy. Nasal mucosa is greatly vascularised as well as mainly permeable giving fast absorption and onset of action. Nasal route is non invasive, extensively used for the local treatment might also be used for systemic therapy as drug directly goes in systemic circulation. Nasal route gives excellent absorption of small molecules, than that of large molecules can be augmented by absorption promoters. The present review presents information pertaining to nasal drug delivery system such as advantages, limitations, anatomy of nose, mechanism of drug absorption, barriers to drug absorption, factors influencing nasal drug absorption, strategies to improve nasal absorption, excipients used in nasal formulations, nasal formulations and their evaluation.

KEYWORDS: Nasal Drug Delivery System, systemic circulation, absorption promoters.

1. INTRODUCTION:

In current time, the nasal drug delivery received a huge deal of attention for its convenient, promising, and reliable way of systemic administration for drugs, especially for those drugs which are ineffective orally and those which must be administered by injections¹. This route provides a large surface area, porous endothelial membrane, high total blood flow, bypassing the first-pass metabolism, as well as ready accessibility. In addition nasal mucosa is permeable to more compounds than the gastrointestinal tract owing to the absence of pancreatic, gastric enzymatic activities, plus interference by gastrointestinal contents².

The early recorded historical application of nasal drug delivery was limited to topical applications of drugs intended for only local effects. However in recent times, its application grown to include a wide range of targeted areas in the body to produce local and systemic effects. Nasal drug delivery too finds a particular place in the traditional system of medicine such as the Ayurvedic system of Indian medicine which is called as “Nasya karma” and is a well-recognized way of treatment³.

In therapeutics, nose forms an vital part of the body for faster and elevated level of drug absorption with the possibility of self-administration. Drugs range from small micromolecules to large macromolecules such as peptide/proteins, hormones, and vaccines, are delivered through the nasal cavity. It is reported that lipophilic drugs are generally well absorbed from the nasal cavity with pharmacokinetic profiles frequently identical to those obtained subsequent to intravenous injection with a bioavailability approaching up to 100% in numerous

Abstract

Schizophrenia treatment includes long-term pharmacotherapy utilising antipsychotic drugs to stop the current episode and lessen the possibility that symptoms may return. Psychiatric patients, particularly those with schizophrenia, frequently have poor medication adherence, which can have negative long-term effects and ultimately lead to treatment failure. A new contributing reason to medication noncompliance is having trouble swallowing traditional tablets and capsules, which has prompted the development of alternate drug delivery methods including orodispersible tablets (ODTs). Compared to conventional tablet formulations, ODTs are linked to enhanced drug compliance. Orally disintegrating tablets (ODTs) are solid unit dose forms that look like regular tablets but contain super disintegrants that speed up how quickly they dissolve and/or scatter in the mouth. This method increased pregastric absorption, which increased bioavailability by reducing first pass hepatic metabolism, lowered dose, quick onset of action, and enhanced clinical performance by minimising side effects. It has also been used to give medications to patients who cannot swallow, such as children, the elderly, and people with mental health issues, in an effort to increase patient compliance for the administration of medications to these patients. This review provides a brief summary of the need for orodispersible drug delivery for the treatment of schizophrenia, its advantages and disadvantages, the challenges of developing dosage forms, the ingredients used to make orodispersible tablets, the processes used to make them, evaluation techniques, and commercially available ODTs.

Keywords: Schizophrenia, Orodispersible tablets, Super disintegrants, Techniques, Excipients and Evaluation.

INTRODUCTION:

Orally given medicine distribution is still regarded as the gold standard in the pharmaceutical industry and is still thought to be the safest, most beneficial, and least expensive way of administration, providing the best route for patient compliance [1]. However, low compliance, particularly in geriatrics, is caused by the widespread issue of tablets and capsules being difficult to swallow [2].

Design of new dosage forms has taken on a lot of significance as a means of enhancing compliance and making administration more convenient. The rapid and complete release of a medicine provided by traditional oral drug delivery may occur as such without having the desired effect. Due to the presence of food, the stomach's pH, enzymatic degradation, variations in GIT motility, and other factors, the medication may not have had enough time to be absorbed [3, 4]. Recently, there has been a lot of focus on designing drug delivery systems for paediatrics and geriatrics with organoleptic elegance and maximum patient acceptability [5-7]. The oral route is recommended for drug delivery because it is easy to use, offers economical therapy, encourages self-medication, and is a noninvasive way that increases patient compliance. A lot of new research is being done in this area [8].

Oral Dispersible Tablets:

When delivering drugs orally, such as with tablets and capsules, drinking water is mostly important because some patients find it difficult to swallow the big usual dosage forms [9]. Orodispersible tablets disintegrate in the mouth without the need for water, minimising dysphagia and increasing patient compliance when used in place of oral medication administration techniques. They are therefore helpful in situations where water is unavailable or forbidden, such as before surgery, during kinetosis, cough bouts brought on by neurological stimulation, or during chest infections. Orodispersible tablets are made using a variety of techniques to ensure that the dose form dissolves fast in the presence of saliva and leaves a pleasant mouth feel [10]. Patients who have trouble swallowing can be given these orodispersible tablets (ODT). They are also known as melt-in-your-mouth, rapid-melting, mouth-dissolvable, or porous tablets [11].

A Review on Colon Targeted Drug Delivery System

K. Srujana¹, B. Hemalatha^{1*}, K. Padmalatha²

¹Department of Pharmaceutics, Vijaya Institute of Pharmaceutical Sciences for women, Vijayawada

²Department of Pharmacology, Vijaya Institute of Pharmaceutical Sciences for women, Vijayawada

*Corresponding Author E-mail: balahemalatha25@gmail.com

ABSTRACT:

Colon-specific drug delivery systems (CDDS) are advantageous for the treatment of a range of local diseases such as ulcerative colitis, Crohn's disease, irritable bowel syndrome, chronic pancreatitis, and colonic cancer. Colon targeted drug delivery system can be utilized to deliver protein and peptide drugs as they that are known to degrade in the extreme gastric pH. These approaches involve the use of formulation components that interact with one or more aspects of gastrointestinal (GI) physiology, such as the variation in the pH along the GI tract, the occurrence of colonic microflora, and enzymes, to attain colon targeting. This article highlights the advantages, limitations and factors influencing colon-specific drug delivery. Further, the review gives information of various conventional, as well as relatively newer formulation approaches presently being utilized for the improvement of CDDS.

KEYWORDS: Colon Targeted Drug Delivery System.

1. INTRODUCTION:

Colon targeted drug delivery has been the centre of numerous studies in recent years due to its potential to improve treatment of local diseases affecting the colon, while minimizing systemic side effects. Some examples of disease states which impact the colon include Crohn's disease (CD), ulcerative colitis (UC), and irritable bowel syndrome (IBS). Drugs such as dexamethasone, hydrocortisone, sulfasalazine, metronidazole and prednisolone are used for the treatment of these ailments. The delivery of these drugs specifically to the colon without being absorbed first in the upper gastrointestinal (GI) tract allows for a elevated concentration of the drug to arrive at the colon with minimal systemic absorption¹.

The colonic contents have a longer retention time (up to 5 days), and the colonic mucosa is known to facilitate the absorption of several drugs, making this organ an ideal site for drug delivery.

A drug can be delivered to the colon via the oral, or the rectal route. Oral dosage forms are the most favoured delivery route for colon-specific delivery due to their convenience. Rectal administration presents the shortest route for targeting drugs to the colon². Yet, reaching the proximal part of colon via rectal administration is difficult. Rectal administration can also be uncomfortable for patients and compliance may be less than optimal³. Drug preparation for intrarectal administration is supplied as solutions, foam, and suppositories. The intrarectal route is used both as a means of systemic dosing and for the delivery of topically active drug to the large intestine. Corticosteroids such as hydrocortisone and prednisolone are administered via the rectum for the treatment of ulcerative colitis. Even though these drugs are absorbed from the large bowel, it is normally believed that their

ABSTRACT:

Conventional drug delivery systems have slight control over their drug release and nearly uncontrollable over the effective concentration at the target site. This type of dosing pattern might effect on constantly changing, unpredictable plasma concentrations. Drugs can be delivered in a controlled design over a prolonged period of time by the controlled or modified release drug delivery systems. For most of the drugs, oral route is the most tolerable route of administration. Certain molecules may have low oral bioavailability because of solubility or permeability limitations. Evolution of an extended-release dosage form also need sensible absorption throughout the gastro-intestinal tract (GIT). Among the existing techniques to improve the bioavailability of these drugs fabrication of osmotic drug delivery system is the most suitable one. Osmotic drug delivery systems release the drug with the zero-order kinetics at a constant rate. This review brings out advantages, disadvantages, principles, basic components and classification of osmotic drug delivery systems.

KEYWORDS: Novel drug delivery system, Osmosis, Osmotic drug delivery system, Osmotic pressure, osmotic pump, Zero order kinetics.

1. INTRODUCTION:

In current years, considerable awareness has been focused on the development of novel drug delivery system (NDDS) osmotically controlled drug delivery system (ODDS) are the type of NDDS which make use of osmotic pressure for controlled delivery of active agent. The release of drug from osmotic system is independent of gastric pH and gastric motility. However, drug release from oral controlled release dosage forms may be affected by pH, GI motility and presence of food in the GI tract. Osmotically controlled drug delivery system (OCDDS) is one of the most favourable drug delivery technologies that use osmotic pressure as a driving force for controlled delivery of active agents.

Drug release from OCDDS is independent of pH and hydrodynamic conditions of the body because of the semi permeable nature of the rate-controlling membrane and the design of deliver orifice used in osmotic systems, so a potency of *In vitro/ In vivo* correlation is achieved. Osmosis refers to process of movement of solvent from lower concentration of solute towards higher concentration of solute across a semipermeable membrane. Osmotic pressure is least pressure which needs to be applied to a solution to prevent the inside flow of its pure solvent across a semipermeable membrane. Osmotic Pump Controlled Release Preparation is a novel drug delivery system with inner drug deliver rate as characteristic and controlled with the osmotic pressure difference between inside and outside of the semipermeable membrane as drug delivery capacity^{1,2}.

ABSTRACT:

Losartan is used to treat high blood pressure (hypertension) and also used to lower the risk of stroke in certain people with heart disease. Therefore, the purpose of this study is to formulate mouth dissolving tablet of losartan potassium to improve its bioavailability, to attain fast onset of action and rise patient compliance. Owing to short bioavailability of 33% and to increase onset of action, fast dissolving tablets of Losartan Potassium were formulated using coprocessed superdisintegrants in order to improve the dissolution rate, in that way the bioavailability. The effect of concentration of the Croscarmellose sodium was studied by a set of three formulations (F1, F2, F3) with concentrations of 2%, 4% and 8% w/w respectively. Similarly, the impact of Sodium Starch Glycolate was studied by a set of three formulations (F4, F5 and F6) respectively. The formulation prepared with 8% w/w of superdisintegrant showed relatively rapid release of Losartan potassium when compared with other concentrations of Croscarmellose sodium and Sodium Starch Glycolate. The formulation prepared with Croscarmellose sodium had showed relatively fast release of Losartan Potassium when compared with Sodium Starch Glycolate. Three formulations (F7, F8 and F9) were prepared by including a combination of superdisintegrants (Co-processed Mixtures), Croscarmellose sodium and Sodium Starch Glycolate by direct compression method. Formulation containing Co-processed mixtures had less disintegration time as compared to the individual superdisintegrants. Subsequently, we can conclude that nature, concentration of the superdisintegrant in addition to combination of superdisintegrants (Co-processed) showed influence on the rate of dissolution.

KEYWORDS: Losartan potassium, Co-processed Mixtures, Fast dissolving tablets.

1. INTRODUCTION:

The most common and favoured route of drug administration is through the oral route. Fast dissolving tablets are gaining position among novel oral drug-delivery system as they have improved patient compliance and have some added advantages compared to other oral formulations.

They are solid unit dosage forms, which disintegrate in the mouth within a minute in the presence of saliva due to super disintegrants in the formulation^{1,2}. It provides numerous advantages with respect to its stability, administration without water, accurate dosing, easy manufacturing, small packaging size, and handling. Its ease of administration in the population especially for paediatrics, geriatrics or any mentally retarded persons makes it a very widespread dosage form. Because of the presence of super disintegrants, it gets dissolved rapidly, ensuing rapid absorption of drug which in turn provides rapid onset of action. As the absorption is taking place

A Review on Emulgels as a Novel Approach for Topical Drug Delivery

N. Krishna Veni¹, P. Yashwanth¹, B. Hemalatha^{1*}, K. Padmalatha²

ABSTRACT:

Topical drug delivery has been used for centuries for the treatment of local skin disorders. Drugs applied to the skin for their local action include antiseptics, antifungal agents, skin emollients, and protectants. Major disadvantage of gel is the delivery of hydrophobic drug. This can be overcome by emulgels. Emulgels have emerged as one of the most attractive topical delivery system as it has dual release control system i.e. gel and emulsion. Since hydrophobic drugs are not soluble in gel bases, it causes problem during the release of drug. When gel and emulsion are used in combination the dosage form is referred as emulgel. In emulgel formulation, the hydrophobic drugs could be incorporated into the oil phase and then oily globules are dispersed in aqueous phase resulting in o/w emulsion which can be mixed into the gel base. The major aim behind this formulation is delivery of hydrophobic drugs to systemic circulation via skin. A distinctive feature of topical drug delivery is the straight accessibility of the skin as a target organ for the treatment. This might be proving improved stability and release of drug than just incorporating drugs into gel base. The purpose of this review article is to exemplify emulgel for topical drug delivery, advantages and disadvantages of emulgel, physiology of skin, major components of emulgel, method of preparation, characterization and marketed products of emulgel.

KEYWORDS: Emulgel, Gel, Topical drug delivery, Skin disorders.

1. INTRODUCTION:

Drugs can be administered by numerous routes to human body namely oral, sublingual, rectal, parental etc. When drug administration through other routes fails or skin infections occur, transdermal delivery system could be employed. Large numbers of dermal products are existing for skin as liquids, powders etc. however the most accepted products are semisolid preparation. Among the semisolid preparations, the transparent gels are utilized both in cosmetics and in pharmaceutical preparations. Gels were prepared by entrapment of large amounts of aqueous or hydroalcoholic liquid in a network of colloidal solid particles. Gel formulations normally demonstrate improved drug release than ointments and creams.

A main drawback is in the release of hydrophobic drugs. Such types of troubles were overcome by emulgel preparations. When gels and emulsion were mixed jointly emulgel is formed. Water phase containing gelling agent would convert an emulsion into an emulgel. Oil in water system was utilized for encapsulating lipophilic drugs whereas water in oil system was utilized for hydrophilic drug. Emulgels could be washed away without difficulty whenever needed and as well shows elegant properties. It in addition illustrates good penetration through the skin¹. Emulgels with properties such as being thixotropic, greaseless, easily spreadable, easily removable, emollient, non-staining, water soluble, longer shelf life, biofriendly, transparent and pleasing appearance were used for dermatological purposes. Drug molecules can penetrate into the skin by three routes: through intact stratum corneum, through sweat ducts, or through sebaceous follicle. The surface of the stratum corneum presents more than 99% of the total skin surface accessible for percutaneous drug absorption. Passage through this outermost layer was the

ABSTRACT:

In the pharmaceutical industry oral route is considered as the safest and convenient route. Fast dissolving tablets (FDTs) are solid dosage forms containing drugs that disintegrate in the oral cavity within less than 1 minute leaving an easy to swallow residue. These dosage forms include superdisintegrants which impart quick disintegration with existence of saliva and can be swallowed without difficulty. Fast dissolving tablets are the very good preference for the paediatric as well as geriatric patients. To improve the bioavailability of many drugs, fast dissolving drug delivery systems are used widely. Sophisticated technologies used for manufacturing fast dissolving tablets are by direct compression method, freeze drying method, sublimation method, mass extrusion and cotton candy process. Taste is the vital factor since these tablets disintegrate directly in the mouth. FDTs are evaluated by various parameters such as hardness test, friability test, water absorption ratio, wetting time, disintegration test and dissolution test. These tablets are also well-known as mouth dissolving tablets and orodispersible tablets. This review article will emphasize on ideal properties, challenges, advantages, disadvantages, conventional techniques, patented technologies and evaluation of orodispersible tablets.

KEYWORDS: Sophisticated technologies, Superdisintegrants.

1. INTRODUCTION:

Medicinal and other curative agents which produces the systemic effect that can be taken by several routes of administration, but oral route is considered to be more effective route and possess high degree of patient compliance¹. Dissolution of drug, absorption of drug, onset of clinical effect of drug and bioavailability of drug is significantly higher in orally disintegrating tablets when compared to conventional dosage form. Basic approach used in developing orodispersible tablets (ODTs) is by increasing the porosity of tablet by using high water soluble excipients in the formulation and by incorporating the appropriate disintegrating agents.

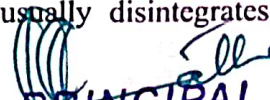

These dosage forms rapidly dissolve in mouth when they immediately come into contact with saliva and releases the drug. Orodispersible tablets are also known as Fast dissolving tablets².

There is even no need of water during administration of drug which will be highly useful for paediatric and geriatric patients. Orodispersible tablets are the tablets which is not coated and when kept in the mouth disperses rapidly before swallowing³. Orodispersible tablets are also known as "Melt in mouth tablets", "Mouth dissolving tablets", "Rapimelt tablets", "Porous tablets", "Quick dissolving tablets" and "Fast dissolving drug delivery". Recently the term ODT is approved by US Pharmacopocia, (CDER) Centre for Drug Evaluation and Research and British Pharmacopocia. According to US FDA, ODT is a solid dosage form which contains drug substances that rapidly disintegrates when placed upon tongue usually disintegrates within a matter of

ABSTRACT:

Solubility is one of the key parameters to attain desired concentration of drug in systemic circulation to show pharmacological response. Various methods are engaged to augment the aqueous solubility of poorly water-soluble drugs and hydrotropic solubilisation is one of them. Hydrotropy is defined as a solubilization process whereby addition of a large amount of second solutes results in an increase in the aqueous solubility of another solute and chemicals which are used in the hydrotropy are called hydrotropes like sodium benzoate, sodium citrate, urea, niacinamide etc. Based on advantages like the high selectivity, independent of pH and cheap, easy availability makes this technique more prevailing than other solubilisation methods. Mixed hydrotropy is a solubilisation technique to augment the water solubility of poorly water soluble drugs by the way of different ratio of blends of hydrotropic agents which gives synergistic augmentation effect. The purpose of this review article is to illustrate the need for solubility, hydrotropic solubilisation, mechanism of action of hydrotrope, classification of hydrotropes, advantages and mixed hydrotropic technique of solubilisation for improving the solubility which in turn helps to attain absorption and improved bioavailability.

KEYWORDS: Hydrotropy, Hydrotropes, solubility, Mixed hydrotropy, Solubilisation.

1. INTRODUCTION:

The present major problem in the pharmaceutical industry was related to strategies that enhance the aqueous solubility of drugs, as nearly 40% of the recently discovered drug candidates experience from poor aqueous solubility. Solubility is one of the key characters to achieve required pharmacological response. Therapeutic effectiveness of a drug relies upon the bioavailability and eventually was attributed to solubility of drug moiety¹. Currently, various formulation technologies were existing to augment solubility and dissolution profile to boost oral bioavailability. In addition to these technologies, 'hydrotropy' was one of the familiar methods accessible for resolving solubility problems².

1.1 Need of solubility:

About 40% of novel chemical entities upcoming from discovery were inadequately bioavailable. Poor bioavailability applies strong limits to the performance of a drug by the requirement to administer a much upper dose than strictly required from a pharmacologic viewpoint³. This could provoke important side effects otherwise generate troubles related to the cost of treatment. Poor bioavailability might as well obligate the formulator to opt the injection route rather than the oral route. For superior oral bioavailability drug should be soluble in gastro-intestinal fluids i.e., aqueous soluble as well as possess permeability properties for good membrane diffusion in turn to arrive at the bloodstream⁴. The crucial plan of the further formulation and development section was to formulate that drug obtainable at appropriate site of action within optimum dose⁵. Hydrotropic agents had been found to be efficient to augment aqueous solubility of numerous hydrophobic drugs and thus can play important role in getting

ABSTRACT:

Nowadays about 74% of drugs are taken orally and are found not to be as effective as required. To improve such characters transdermal drug delivery system was emerged. Drug delivery through the skin to attain a systemic effect of a drug is commonly known as transdermal drug delivery and differs from traditional topical drug delivery. Transdermal drug delivery systems (TDDS) are dosage forms involves drug transport to viable epidermal and or dermal tissues of the skin for local therapeutic effect while a very major fraction of drug is transported into the systemic blood circulation. The adhesive of the transdermal drug delivery system is critical to the safety, efficacy and quality of the product. Topical administration of therapeutic agents offers many advantages over conventional oral and invasive methods of drug delivery. Several important advantages of transdermal drug delivery are limitation of hepatic first pass metabolism, enhancement of therapeutic efficiency and maintenance of steady plasma level of the drug. This review article provides an overview of advantages and disadvantages, factors affecting transdermal drug delivery, components and types of transdermal drug delivery, methods of preparation and methods of evaluation.

KEYWORDS: TDDS, Topical drug delivery, Systemic blood circulation, Skin.

1. INTRODUCTION:

Oral route is the popular route of drug delivery. Although it has some disadvantages including first pass metabolism, drug degradation in gastrointestinal tract due to enzymes, pH etc. To cross these problems, a novel drug delivery system was developed. In this transdermal delivery system medicated adhesive patches are prepared which deliver therapeutically effective amount of drug across the skin when it placed on skin. Medicated adhesive patches or transdermal patches are of different sizes, having more than one ingredient. Once they apply on unbroken skin they deliver active ingredients into systemic circulation passing via skin barriers.

A patch containing high dose of drug inside which is retained on the skin for prolonged period of time, which get enters into blood flow via diffusion process. Drug can penetrate through skin via three pathways-through hair follicals, through circulation passing via skin barriers. A patch containing high dose of drug inside which is retained on the skin for prolonged period of time, which get enters into blood flow via diffusion process. Drug can penetrate through skin via three pathways-through hair follicals, through sebaceous glands, through sweat duct. Transdermal drug delivery systems are used in various skin disorders, also in the management of angina pectoris, pains, smoking cessation and neurological disorders such as Parkinson's disease¹.

FORMULATION AND EVALUATION OF CONTROLLED DRUG RELEASE TABLET OF ATENOLOL

K.Divya*, B.Jagadeeswari, G.Saikumari, V.Anil Kumar, N.V.N.Koteswara Rao
Department of Pharmaceutics, Vijaya Institute of Pharmaceutical Sciences for Women, Erikepadu,
Vijayawada, India.

ABSTRACT

The role of chronotherapeutics in hypertension and anti-inflammatory management is based on the recognition that blood pressure and pain does not remain constant throughout the day. Instead, it tends to be higher in the early morning hours and lower in the evening hours. The aim of the present study was to design time controlled tablet of atenolol, as chronopharmaceutical drug delivery system by compression coating. Formulation design involves coating polymers HPMC K05:EC (ratio - 1:1,1:2,2:1 w/w) and HPMC K05:CA (ratio - 1:1,1:2,2:1 w/w) were exploited for their pulsatile drug release ability. The basic idea behind the dosage form development is to investigate effect of coating design on lag time and drug release from press-coated pulsatile release tablet. Coating materials were evaluated for pre-compression parameters like bulk density, tapped density, Angle of repose, compressibility index, Hausner's ratio and also evaluated the tablet for hardness, thickness, friability, weight variation, swelling index, drug content, In vitro drug release, drug excipient compatibility studies. The Formulation optimized on basis of acceptable tablet properties and in vitro drug release. The results indicate that formulation F9, F14 for Atenolol press-coated tablets achieve a burst release after 7.45 & 8hrs lag time which is applicable pulsatile drug delivery for hypertension.

Key Words: Atenolol, HPMC K05, pulsatile release tablet.

INTRODUCTION

Pulsatile drug delivery systems (PDDS) (or) Cracking delivery systems (CDDS) can be classified in site specific and time controlled systems. Drug release site specific systems depends on the environment in the GIT. Eg:- on pH, presence of enzymes, and the pressure in the GIT. Time controlled pulsatile delivery has been achieved mainly with drug containing cores, which are covered with release

Controlling layers. The cores serve as a reservoir, which protects the core from environment, eg:- water, acidic pH and enzymes, until the drug is released after the lag phase. The coatings can erode/ dissolve, rupture (or) alter their permeability at the required time. The potential benefits of chronotherapeutics have been demonstrated in the management of a number of diseases. In particular there is a great deal of interest in how chronotherapy can particularly benefit patients suffering from allergic rhinitis, rheumatoid arthritis and related disorders, asthma, cancer, cardiovascular diseases, and peptic ulcer disease. Circadian rhythm of the body is an important concept for understanding the optimum need of drug in the body. There is a constant need for new drug delivery systems that can provide

FORMULATION AND EVALUATION OF MODIFIED PULSATILE
DRUG DELIVERY SYSTEM FOR TELMISARTAN

K.Divya*

Department of Pharmaceutics, Vijaya Institute of Pharmaceutical Sciences for Women, Enikepadu,
Vijayawada, India.

ABSTRACT

Telmisartan is an Angiotensin II receptor antagonist used in the treatment of hypertension. According to the Pharmaceutical Classification System, Telmisartan belongs class II drug; high permeability low solubility. It is practically insoluble in water and it shows low dissolution profile and poor absorption. The objective of the present study was to design and evaluate modified pulsatile drug delivery system of marketed product of Telmisartan according to circadian rhythm using natural polymers like xanthan gum, sodium alginate, guar gum, sodium CMC for compressed coated through direct compression method and marketed product of telmisartanas inner core tablet through direct compression method to achieve a predetermined lag time(8hrs) for chronotherapy of hypertension.. Ethylcellulose:HPMC 70mg:130mg(F12), HPMC:Celluloseacetate 130mg:70mg (F15) Xanthan gum: Sodium alginate 75mg: 125mg (F₂₀) and 85mg: 115mg (F₂₁) showed predetermined lag time of 8 hrs so these are selected as optimized formulations and they has shown the immediate release of the drug after the lag time of about 8 hrs. Optimized formulation was evaluated for weight variation, hardness, disintegration time and Invitro dissolution studies, drug – excipient interaction studies.

INTRODUCTION

Compression coating can involve direct compression both the core and the coat obviating needs for separate coating process and use of coating solutions. The outer tablet of the compression-coated tablet provides the initial dose, rapidly disintegrating in the stomach and the inner layer is formulated with components that are insoluble in gastric media but are released in the intestinal environment. Materials such

as hydrophilic cellulose derivatives can be used. Compression is easy on laboratory scale. The major drawbacks of the technique are that relatively large amounts of coating materials are needed and it is difficult to position the cores correctly. Press coating also referred to as double compression coating or compression coating (or) dry coating is an old technique first proposed by "Noyes" in an 1890 patent. The technique requires a specific tablet press with compression coating capability. The press coating technique offers many advantages, such as protection of hygroscopic, light sensitive, oxygen liable and acid liable drugs, isolation of incompatible drugs from each other, and provides a method for both sustained drug release and modification of the drug release profile. In general, a press coated tablet consists of a

ABSTRACT

In addition to offering a wide variety of pharmaceuticals, nature may also have the solutions to any medical problems. There are still many clinically useful medicines found in nature. Ulcer diseases are a significant and expanding category of health problems. Today, a variety of drugs are used to treat peptic ulcers, but all of them have drawbacks, such as the potential for relapse and drug combinations. Peptic ulcers are a condition that is increasingly being treated with plant-based medications. Pure phytochemicals are difficult to get as ulcer treatments. Both time and money are invested in it. *Mangifera indica*, *Azadirachta indica*, *Ocimum sanctum*, *Annona squamosa*, *Mimosa pudica*, *Terminalia chebula*, *Ficus religiosa*, *Carica papaya*, *Aegle marmelos*, *Moringa oleifera*, *Psidium guajava*, and other plants are some of the plants that act as antiulcer herbals and are ignored for their beneficial function. Flavonoids can help to decrease free radicals to some extent in combating ulcers. Numerous isolated compounds have significant anti-ulcer activity, such as mangiferin, nimbidin, eugenol, tannic acid, mimosine, gallic acid, chebulinic acid, naringenin, papain, and others. The results of this review paper suggest that the anti-ulcer effect is mediated by a number of medicinal plants and their chemical components. This drives us towards development of novel phytoconstituents with structural modification to act as better antiulcer drug molecules at clinical level.

Keywords: Anti-Ulcer, Peptic Ulcer, Phyto constituents, Structural Modification

Introduction

An open sore on the skin or mucous membrane known as an ulcer is characterized by the expulsion of inflammatory dead tissue (Chan *et al*, 2000). Ulcers can appear almost everywhere, however they most usually affect the lower extremities and the digestive tract. Peptic ulcers are one of many different types of ulcers, which can occur in the vagina, esophagus, or stomach. An erosion of the

ABSTRACT

Hypertension is one of the major mortality factors across the world according to recent statistical surveys. It plays a major role in maintaining the stability of the patient during the intraoperative period and in the management of anaesthesia. The complications caused during surgery and during induction of anaesthesia will be completely controlled by the anaesthesia team by using medications such as diuretics, beta blockers, ACE inhibitors. The article manifests the considerations of hypertension in anaesthesia. A clinical survey had been conducted involving 40 patients in two different age groups of 20-40 years and 50-80 years. The study involves the use of two drugs labetalol and carvedilol. The results of the study indicated that the used anti-hypertensive drugs reduced complications and manifestations in the selected age group people. Further studies such as genetic inheritance, and involved biochemical factors may be investigated.

Keywords: Hypertension, Anaesthetic Period, Labetalol, Carvedilol.

INTRODUCTION

Hypertension (hyper=over/beyond; tension=stressed) is also called SILENT KILLER. It can be defined as a condition in which the high amount of pressure of blood flow builds up against the walls of arteries. Patients above 65 yrs age group; persons having family history of hypertension; obese patients and high intake of sodium through diet are the major risk factors for hypertension. Chronic conditions such as kidney and hormonal problems; high cholesterol and RBS levels are the major causes of hypertension. Based on the type of hypertension there will be various medications for treatment[1][2].

TYPES:

Major hypertension is divided into 2. types: 1. SYSTEMIC HYPERTENSION 2. PULMONARY HYPERTENSION. The increase in systemic arterial blood pressure is called Systemic hypertension, also called SAH. It is usually characterised by nocturnal decrease in blood pressure. It is of 2.types: PRIMARY and SECONDARY. Pressure in blood vessels leading from heart to lungs is too high, is defined as Pulmonary hypertension, also called as PAH. This can be caused by CHD,CAD, Cirrhosis, Blood clots in lungs, Emphysema and also through Genetics[3].

The general stages of HTN are described in table-1.

The normal blood pressure is about 120/80mmHg

Abstract: Two popular models Rayleigh and gamma (2) distributions are considered to verify whether one can be an alternative to the other. The cumulative distribution function of gamma (2) is not analytically tractable, whereas for Rayleigh distribution is tractable which motivated for the study. Test statistics based on likelihood ratio is suggested to discriminate between Rayleigh and gamma (2) models. The percentiles and power of the proposed test statistics were also tabulated, and a comparison was made with respect to the power for a given sample and level of significance.

Keywords: Rayleigh distribution, gamma (2) distribution, Likelihood Ratio Criterion.

I. INTRODUCTION

The cumulative distribution function and probability density function of Rayleigh distribution (Weibull with shape parameter 2), gamma distribution with shape parameter 2 and scale parameter σ are given by:

$$F_0(x) = 1 - e^{\left(\frac{-x^2}{2\sigma^2}\right)}; 0 \leq x \leq \infty, \sigma > 0 \quad (1.1)$$

$$f_0(x) = \frac{x}{\sigma^2} e^{\left(\frac{-x^2}{2\sigma^2}\right)}; 0 \leq x \leq \infty, \sigma > 0 \quad (1.2)$$

$$F_1(x) = 1 - e^{\left(\frac{-x}{\sigma}\right)} \left(1 + \frac{x}{\sigma}\right); x \geq 0, \sigma > 0 \quad (1.3)$$

$$f_1(x) = \frac{x}{\sigma^2} e^{\left(\frac{-x}{\sigma}\right)}; x \geq 0, \sigma > 0 \quad (1.4)$$

The frequency curve of the two distributions look alike and cumulative distribution of Rayleigh distribution is analytically invertible and that of a gamma distribution is an incomplete gamma function which is extensively tabulated in [10]. The graph of the frequency curve of Rayleigh distribution and gamma distribution with shape parameter 2 are given in figures 1.1 and 1.2.

A REVIEW ON PROTEOMIC ANALYSIS

ABSTRACT

Proteomics is a major component of protein research, especially its function and structure. Proteomics involves the use of technology to identify and quantify the total amount of protein present in a cell, tissue, or organism. Add other “omics” technologies such as genomic and transcriptomics to explain the protein identity of an organism, as well as to identify the structure and functions of a particular protein. Proteomics-based technologies are used in a variety of ways in different research settings such as the discovery of different diagnostic criteria, people who will develop vaccines, understanding pathogenicity patterns, modification of patterns that respond to different signals and interpretation of protein mechanisms that work in various diseases. Proteomics is really complex because it involves the analysis and classification of all genome protein signatures.

Techniques that include 2-D gel electrophoresis, mass spectroscopy with LC-MS and MALDI-TOF / MS etc., play an important role in analysing protein novels and their role in disease retention and treatment of widely used intermediate proteomics amine. However, the use of proteomics resources which includes equipment software, database and the need for skilled workers greatly increases costs, thus reducing their widespread use especially in developing countries. In addition, the proteome is highly robust due to the complex control systems that control the levels of protein production. In the current review it focuses on the

ABSTRACT

Acute coronary syndrome is a medical emergency that needs to be identified and treated immediately since it frequently results in severe chest pain or discomfort. Active smoking, metabolic syndrome, diabetes, and hypertension are common risk factors among symptomatic Acute coronary syndrome (ACS) patients. Acute coronary syndrome (ACS) patients with symptomatic carotid stenosis who have recently undergone percutaneous transluminal coronary angioplasty (PTCA) are always categorised as being at high risk for surgery because they need to continue receiving dual antiplatelet therapy. In order to compare the prognostic performance of three major risk scoring systems, including the global registry for acute coronary events (GRACE), thrombolysis in myocardial infarction (TIMI), and prediction of 30-day major adverse cardiovascular events following

primary percutaneous coronary intervention (RISK-PCI). The only scoring method that could anticipate recurrent ischemia necessitating Target vessel revascularisation (TVR) was RISK-PCI. The most precise system for determining the risk of acute myocardial infarction (AMI) is the Global Registry of Acute Coronary Events (GRACE) score. However, it is unclear whether GRACE score is applicable to the present patients with a high prevalence of

ABSTRACT:

Pain is the most prevalent sign of sickness, and it accompanies us from birth. It is a defence mechanism that the body employs in response to a potentially dangerous stimuli. According to the definition, pain is a sensory and emotional experience. It is based on the observation of psychological interpretation of the events occurring and is related to the stimulus that it produces. Depending on the interaction between the psyche and the body, pain can have an impact on both our current sensation of pain and psychosomatic illnesses. An unpleasant feeling is usually pain. The irritation of pain receptors, which are present in the skin, joints, and numerous internal organs, can result in the perception of pain. Damage to the neurological system, including the brain, spinal cord, and peripheral nerves, may also be the source of pain. The phenomena of pain are complicated. The intensity of the stimulus, a person's susceptibility, and their level of pain tolerance all affect how painful something feels. Mechanical, thermal, or chemical stimulation can trigger pain receptors. These receptors translate unpleasant stimuli into an electrical signal as a result of their activity. Nerve fibres carry this impulse to the spinal cord, from where it travels to the brain. At this stage, we realise that something is hurting us. In addition to being somatic in character and connected to the health of the body, pain is a multidimensional phenomenon. The subjective experience of pain, which is controlled by the central nervous system, is therefore just as significant as the physiological mechanism of pain. It includes the emotional components of suffering, attitude towards pain, and expression of pain. Pain can be classified in several ways. One is to separate it into acute pain and chronic pain. Understanding the fundamentals of pain treatment requires a review of pain physiology.

ABSTRACT: Cardiovascular disease, including acute coronary syndrome (ACS), remains a significant global health concern, responsible for a substantial proportion of deaths worldwide. ACS is a type of cardiovascular disease characterized by chest pain resulting from an imbalance in blood supply to the coronary arteries in the heart, and is caused by atherosclerotic plaque and thrombosis formation. Major adverse cardiac events (MACE) are a common cause of death in ACS, including non-fatal myocardial infarction, non-fatal stroke, cardiovascular death, heart failure, coronary revascularization, and ischemic cardiovascular events. While there are several risk factors associated with MACE in ACS patients, the exact causes of these events after treatment are not yet fully understood. Age, male sex, hypertension, hyperlipidaemia, diabetes, smoking, left ventricular dysfunction, severity of coronary artery disease (CAD), and comorbidities are all associated with a higher risk of adverse outcomes. However, the risk factors for first and recurrent events may differ, similarly the risk factors for long-term and short-term recurrence may also differ. Therefore, ongoing research is essential to identify and evaluate risk factors for MACE in ACS patients, particularly over the long term. Advancements in the diagnosis and treatment of ACS have led to changes in the most common risk factors for MACE. Therefore, ongoing research is necessary to inform treatment decisions and improve outcomes for ACS patients. Such studies will help to identify high-risk patients and develop personalized treatment plans that consider the individual's unique risk profile. By doing so, we can reduce the incidence and impact of ACS and related MACE.

ABSTRACT

Background: Anaemia is a prevalent consequence of renal failure characterized by poor health and a higher risk of morbidity and mortality. To treat anaemia in haemodialysis patients, costly erythropoietic proteins are frequently used. Cost studies typically concentrate on medication purchase expenses. Resources for tracking anaemia treatment. **Objective:** The purpose was to analyse all erythropoietin-stimulating agents, are additional expenses related to anaemia treatment. **Methods:** To conduct research articles evaluating the effectiveness of ESAs in reducing costs for dialysis patients with renal failure. **Results:** The results of this study is collected from various database/sources like; PubMed, ScienceDirect, and others were studied. **Conclusion:** Compared to administering ESAs to target lower haemoglobin levels (9–12 g/dL), utilizing ESAs to target a haemoglobin level of 12 g/dL is linked to inferior clinical results and a substantial rise in cost. The cost-effectiveness of utilising ESAs in the population on dialysis is estimated with a wide range of accuracy.

KEYWORDS: Erythropoietin stimulating agents (ESA), Anaemia, Haemodialysis

INTRODUCTION

Globally, both the incidence and prevalence of individuals with chronic kidney disease (CKD) are growing.¹ In individuals with chronic kidney disease who need dialysis therapy, anaemia is common and often severe. The fundamental cause of anaemia is a lack of erythropoietin synthesis by the kidneys, even though other causes including iron deficiency and shorter red blood cell survival are significant contributing variables.² Additionally, anaemia is associated with reduced quality of life, shorter kidney survival, a rise in morbidity and mortality, and higher costs in chronic haemodialysis patients (CHP); it is generally treated with erythropoiesis-stimulating agents (ESA).¹

ESAs are a class of drugs used to treat anaemia brought on by end-stage CKD. They work by stimulating the differentiation of progenitor cells into RBCs in the bone marrow. Each ESA needs to be administered continuously to maintain stable serum haemoglobin (Hb) levels in the specified range.³ The class of erythropoiesis-stimulating agents (ESA) includes epoetin alpha (Epo α), epoetin beta (Epo β), darbepoetin, and the continuous erythropoiesis receptor activator with pegylation. Darbepoetin alfa can be taken once weekly or once every two weeks, but ESA-like epoetin alfa and Epo β need regular administration (from three times weekly to once weekly) to maintain stable Hb levels within the recommended target range.¹ Continuous erythropoietin receptor activator (CERA) has demonstrated the ability to maintain haemoglobin levels steady and within the target with a once-monthly dose.

ABSTRACT:

The majority of surgical patients experience uneventful recovery and return to their regular daily activities within a few weeks. Yet, a concerning number of individuals experience prolonged postsurgical pain. But every chronic pain was once acute, which is a fact that is rarely acknowledged. The established phenomenon of acute pain turning into chronic pain places a significant strain on the healthcare system. The underlying science discussed in this article is how cellular alterations in the peripheral and central nervous systems cause peripheral and central sensitization, as well as pathophysiological changes that occur during the processing of pain. It discusses the various aspects of the transition from acute to chronic pain. There is an enlistment of the risk factors such as postoperative surgical, psychosocial, socioenvironmental, and patient-related factors, medical factors and strategies for prevention (or limitation) are offered.

KEYWORDS: Acute pain, chronic postsurgical pain, pathophysiological changes, risk factors, preventive strategies

INTRODUCTION:

Each person's experience of pain is unique, and there are numerous ways to feel and interpret pain. Pain is "an unpleasant sensory and emotional experience associated with existing or potential tissue damage, or defined in terms of such damage," according to the International Association for the Study of Pain (IASP)¹. It exhibits a complex constellation of evolving effects involving numerous neurotransmitters and modulators, the immune system, and the peripheral, spinal, and cerebral levels². Acute and chronic pain are two broad classifications of pain. In contrast to chronic pain, which is described as a painful condition that lasts longer than the typical healing period, acute pain is referred to as a painful condition with a rapid onset or of a brief duration⁴. Nociception is a sensory process that detects "actual or potential tissue damage" and is clinically characterised by hypersensitivity to mechanical, thermal, or chemical stimuli (such as when inflammatory substances are released during an injury or pressure is applied to an abdominal incision during coughing).

ABSTRACT

Pain after surgery is an essential issue. In addition to being upsetting, postoperative pain is harmful to the patient. Postoperative pain may have a substantial role in increased morbidity, delayed hospital departure, and decreased patient satisfaction. Postoperative pain is still a significant issue in surgical practise, and it needs to have its current therapy reviewed. There are several regimens in use, and their effectiveness in reducing pain has to be examined. Basing upon the VAS score the pain assessment is done. Diclofenac and Tramadol are the drugs that are used for the pain management. Diclofenac and Tramadol are well-established analgesics for postoperative pain control, although they have certain side effects that limit their acceptability. Some studies say that diclofenac and tramadol have an equianalgesic effect. While some studies say that diclofenac is more effective than tramadol. While some studies say that tramadol is more effective than

diclofenac. However, the treatment to the patient which can be given depends on various factors of the patient like their age, depending on their surgery, their past medical history, etc.

ABSTRACT:

In patients receiving percutaneous coronary intervention (PCI) for Acute Coronary Syndrome (ACS), to compare the relationship between ticagrelor and clopidogrel with adverse cardiac events. In daily practice, it is important to consider the advantages and hazards of ticagrelor vs. clopidogrel. To assess the relationship between P2Y12 inhibitor adherence and Major Adverse Cardiac Events (MACE), and to compare the risk of MACE with ticagrelor vs clopidogrel in patients with ACS treated with PCI. All-cause mortality, hospitalization for ACS, unexpected coronary revascularization, or stent thrombosis within 365 days of the original PCI are considered major adverse coronary events. For ACS patients administered without revascularization, the effective platelet inhibition strategy is undefined. Patients suffering acute coronary syndromes (ACS) or getting coronary stenting are advised to take clopidogrel. Ticagrelor, a reversible oral P2Y12-receptor antagonist, may be helpful for patients with ACS and planned primary percutaneous coronary intervention since it inhibits platelets more quickly, more effectively, and consistently than clopidogrel. Relative to clopidogrel, ticagrelor minimizes ischemia events and death in acute coronary syndrome (ACS). But with ticagrelor, there was an overall significant risk of bleeding.

KEYWORDS:

Percutaneous Coronary Syndrome (PCI), Acute Coronary Syndrome (ACS), and Major Adverse Cardiac Events (MACE). Ticagrelor, Clopidogrel.

ABSTRACT

Anemia is a known side effect of chronic renal disease, yet it is still challenging to treat. The benefits of erythropoiesis-stimulating drugs (ESAs) seem to be limited to reducing the need for blood transfusions and possibly improving quality of life. Hemoglobin levels are increased by ESAs. Prolyl hydroxylase inhibitor of hypoxia-inducible factor (HIF-PHI), Prolyl hydroxylase inhibitors (PHIs) which increase endogenous erythropoietin production, have recently been developed and show promise for improving outcomes for those with anemia brought on by the chronic renal illness. These drugs are used internationally and have been found in randomized controlled trials to be at least as effective as ESAs. On the other hand, recent clinical trials have clarified significant iron supplementation features, which may alter future treatment aims. Oral iron supplementation is the preferred form of treatment because of its ease of use and cost-effectiveness. In

severe cases, ESA therapy is preferred because it provides rapid relief of the symptoms of anemia and reduces the number of transfusions required.

ABSTRACT

Multidrug-resistant tuberculosis (MDR-TB) is the biggest health concerns in the world today, due to its restricted and expensive treatment options. The severity and burden of MDR-TB differ significantly from nation to nation & region to region. According to the World Health Organisation (WHO) most recent study, there are approximately 4,50,000 MDR-TB cases worldwide, with the majority occurring in China, India, Eastern Europeans and Central Asian Countries. MDR-TB is tuberculosis which is resistant to atleast isoniazid & rifampicin, the two most potent anti-TB drugs. Using second line medications, MDR-TB can be managed and cured. However, there are few choices for second line therapy, and requires prolonged chemotherapy (lasting at least 9 months & sometimes up to 20 months), using pricey and toxic drugs. The treatment is challenging for MDR-TB, as it requires administration of at least four antitubercular medications, many of which are held with frequent adverse reactions. Drugs should be selected based on the past medication history, known resistance patterns, and drug-susceptibility testing (DST) data, if available.

ABSTRACT

Chronic kidney disease (CKD) involves a gradual deterioration of kidney function and it is typically present with other comorbidities, such as diabetes mellitus and cardiovascular conditions like hypertension, heart failure, and stroke. Globally, the prevalence of CKD is increasing, with estimates ranging from 11 to 13%. Several medications are used by them as a result of coexisting diseases and declining renal function. Drug interactions and adverse drug reactions (ADRs) in polypharmacy might arise as a result of different pathological and physiological changes caused by renal impairment. Use online or electronic calculators to calculate the dosages of medications cleared by the kidneys by the creatinine clearance or glomerular filtration rate. Reduced doses, longer intervals between doses, or a combination of the two are suggested maintenance dosage modifications. Although not all patients who take interacting

medications experience negative side effects, it is nonetheless essential to take reasonable care to prevent accidents in all circumstances where interactions are conceivable. In observational studies conducted globally about drug-drug interaction, the prevalence of moderate to minor drug interactions is more than the major interactions. Drug interactions

ABSTRACT

Dyslipidemia is a potential risk factor for to access cardiovascular disease in chronic kidney disease patients. It promotes the identification and treatment of hyperlipidemia as a symptom of end-stage renal disease. Different phases of renal impairment are characterized by various qualitative and quantitative alterations, which are linked to the rate of glomerular filtration rate decline. Elevation of serum lipoproteins like total cholesterol, triglycerides, and low-density lipoprotein and decrease of high-density lipoprotein shortage and their atypical functions in chronic kidney disease patients as the major problem of atherosclerosis. So that studying the lipid profile in renal disease patients is essential to preventing morbidity and death because dyslipidemia, which is quite common in individuals with the condition,

causes cardiovascular disease the most common cause of mortality. So strictly monitoring the lipid profiles along with regular hemodialysis and proper medical management will help to prevent various complications and will also improve the quality of life in CKD patients.

ABSTRACT

To identify problems in patients receiving hemodialysis for chronic renal failure and to connect them with clinical and sociodemographic parameters. Together with peritoneal dialysis and renal transplantation, hemodialysis (HD) is a common renal replacement therapy in the treatment of end-stage renal disease (ESRD). Hemodialysis can reduce morbidity and mortality in people with kidney disease, but it also comes with a number of risks that might arise from either using it long-term or during the dialysis sessions. It is the most typical technique for eliminating waste and poisonous chemicals from the body, and as a result, it is utilised to treat patients with various forms of renal failure. The development of numerous highly developed and sophisticated dialysis devices has made the therapy more practical and promising nowadays. Nonetheless, patients may still have a variety of difficulties even when receiving dialysis treatment using modern, efficient

equipment. Hemodialysis is linked to a number of potentially fatal consequences, however these complications are rare and can be treated and prevented by a variety of preventative therapies provided by the medical team.

ABSTRACT

Uncontrolled hypertension and its leading cause, cardiovascular disease, are associated with an increased risk of developing chronic kidney disease (CKD). Because of the interplay between hypertension and CKD, patients with impaired renal function are at a higher risk of cardiovascular and cerebrovascular outcomes. The purpose of this study was to examine the characteristics of people with chronic kidney disease who are also hypertensive, as well as the current antihypertensive treatment pattern in CKD patients. The ESH recommended dual and triple therapy, which was prescribed. Given how hypertension and CKD interact, it is crucial to treat hypertension aggressively to improve cardio and Reno protection in these CKD patients. Antihypertensive drug use patterns among CKD patients

provide an individual's BP control and related renal outcomes. In individuals with hypertension CKD, a sensible multimodal antihypertensive regimen can improve patient outcomes.

ABSTRACT

Polycystic Ovary Syndrome (PCOS) is a common female endocrinopathy with unknown origins that is characterized by hyperandrogenism, oligo-/anovulation, and ovarian cysts. Obesity, insulin resistance, and systemic low grade inflammation are all common in women with PCOS. In 2012, tremellen and pearce proposed the idea that dysbiosis of the intestinal (gut) microbiota is a contributing factor to PCOS metabolic and reproductive manifestations. The gut microbiota has been shown to play a role in the onset and progression of many diseases, including type 2 diabetes, obesity, coronary heart disease, and so on. In the past five years, studies in both human and animal models have determined that alterations in the taxonomic composition of gut bacteria are associated with PCOS. It sheds light on the pathogenesis of polycystic ovary syndrome (PCOS). This study provided the link between gut microbial composition and serum metabolites contributing to the occurrence and development of PCOS. Altogether, these results suggest that dysbiosis of the gut microbiome may be sufficient to develop PCOS-like symptoms, and the modulation of gut microbiota may be a potential therapeutic target for PCOS.

ABSTRACT

Chronic kidney disease (CKD) and hypertension are closely related pathophysiological conditions; as a result, hypertension can deteriorate kidney function, and a progressive reduction in renal function can in turn, worsen blood pressure regulation. The prevalence of hypertensive end-stage renal disease keeps rising yearly. Controlling systolic and diastolic hypertension is crucial to lowering this incidence. The prevalence ranges from 60-90% depending on the stage of CKD and its causes. The mechanism of hypertension in CKD includes volume overload, sympathetic dysfunction, and alteration in hormonal systems that regulate blood pressure. This review presents information concerning the pathophysiological mechanism of hypertensive renal disease, the role of salt restriction, and management issues in HTN in patients with CKD including the timing of anti-hypertensive medication dosing, and blood pressure targets. Addressing this salt sensitivity is critical for the management of HTN in CKD whenever

possible ACE inhibitors should be part of the treatment. Since these drugs are reno-protective beyond their antihypertensive effect in certain strategies for delaying kidney progression. In order to achieve the target blood pressure levels advised by worldwide recommendations, numerous levels of care, including a number of pharmacological and behavioural changes,

ABSTRACT

Nanomedicine is a branch of study concerned with organic medical applications at the nanoscale. The primary goals of nanotechnology in drug delivery include, more specific drug targeting and delivery, reduction in toxicity while maintaining therapeutic effects, greater safety and bio-compatibility, and faster development of new safe medicines. According to the researchers, plant-derived exosome-like nanoparticles (PENs) are likely to become viable therapeutic modalities for disease management or pharmaceutical administration. Edible plant derived nanoparticles(epNPs) have been prepared from various edible plants such as corn, citrus, grapefruit, ginger, and broccoli were studied in this review. Increased solubility and the ability to improve storage stability, enhanced permeability and bioavailability, fewer side effects, prolonged half-life, and tissue-

targeted administration are some of the benefits of NLCs over conventional carriers. The systematic literature review concluded that Nanotechnology-based drug delivery systems showed considerable potential in improving cancer treatment. Combining natural medicines with chemotherapy could be a viable cancer-eradication strategy in the near future. Many natural chemicals have emerged as alternative cancer preventative and treatment options. The

ABSTRACT

Alzheimer's disease is a neurological brain disorder, that slowly destroys the memory and thinking skills and eventually the ability to carry the simple tasks. Evidence based Management of Alzheimer's disease is demanding, and the drugs target to improve the cognitive and behavioral symptoms at various stages to get the desired therapeutic outcomes had been implemented. Up to this date, symptomatic therapy, exists for Alzheimer's disease. The goal of therapy is to reduce or stabilize the rate of cognitive decline by initiation of cholinesterase inhibitor include rivastigmine, donepezil treats mild to moderate alzheimer's disease. The N-methyl -D-aspartate antagonist, memantine, may be used as monotherapy or in combination of cholinesterase inhibitors for moderate to severe alzheimer's disease. During this therapy, cognitive and behavior status

should be monitored over 6 months interval and pharmacologic treatment of alzheimer's disease should be continued to relieve the symptoms and improve the quality of life for the person and their family and caregivers.

ABSTRACT

Myocardial Infarction commonly known as a heart attack is the disease of the blood vessel supplying the heart muscle (myocardium) i.e; coronary heart disease. The area of heart muscle has either zero flow or so little flow that it cannot sustain cardiac muscle function is said to be infarcted and the overall process is called myocardial infarction. Mainly it is caused due to oxidative stress and atherosclerosis. According to the inter heart study report, nine factors are responsible for 90% of myocardial infarction. Risk factor include diabetes mellitus, smoking, hypertension, hyperlipidemia, sedentary life style, obesity, stress and depression. The ECG, Coronary angiogram and X-ray of heart and blood vessels can be performed to observe the narrowing of coronary arteries. In this article the causes and treatment of Myocardial Infraction is described.

KEYWORDS: Myocardial infarction, Atherosclerosis, Oxidative stress, Hyperlipidemia.

ABSTRACT

The most frequent cause of myocarditis, or inflammation of the heart muscle, is a viral infection. This unusual cardiac disorder makes it challenging for the heart to pump blood because it weakens the heart muscle. Myocarditis, an underdiagnosed illness, is a common cause of acute heart failure, abrupt death, and persistent dilated cardiac myopathy. Myocarditis is a clinical and histological term for a variety of pathological immune processes in the heart. In patients with acute and chronic myocarditis, changes in the number and function of lymphocyte subsets and macrophages, as well as antibody-mediated injury, are common. Vaccines that have shown protection against the morbidity and mortality of covid-19 associated with the uncommon side effect of acute myocarditis have confounded immunization efforts. The incidence, diagnostic measures, and treatment for myocarditis with the Covid-19 vaccine have been discussed. The incidence is about 20-30 per million cases mainly affecting male patients in the age group of under 30 years. Although the mechanisms are mostly theoretical, molecular mimicry and innate immune responses have been proposed. Individual and population-level benefits of vaccination outweigh the risks of this rare and mild form of myocarditis according to risk-benefit analyses. Myocarditis following covid-19

ABSTRACT

Coronary artery disease is the narrowing or blockage of coronary arteries, usually caused by atherosclerosis or any obstruction in the arteries by plaque formation in the heart valves. CAD is thought to begin with damage or injury to the inner layer of a coronary artery. In India a study conducted^[27] in 2016, CVDs were responsible for 28.1% of all fatalities and 14.1% of all DALYs, up from 15.2% and 6.9%, respectively, in 1990. The prevalence of myocardial infarction (MI) is now greatest in India. With 261,694 fatalities from hypertensive heart disease in 2013 (an increase of 138% from 1990), this CVD is among India's major health issues. Compared to other ethnic groups, Indians are 2-4 times more likely to be hospitalized for CAD complications, and admission rates are 5-10 times higher for populations under 40 years. Diabetics have a CAD prevalence of 21.4%, whereas non

-diabetics have a prevalence of 11%. Risk factors for higher prevalence of CAD in Indians include hypertension, diabetes mellitus, dyslipidaemia, smoking, and obesity. These heart conditions, such as CAD and MI, are brought on by plaque build-up along the inner walls of coronary arteries, atherosclerosis, heart valve rupture, smoking, family history, and lifestyle

ABSTRACT

Coronavirus disease (COVID-19) is a major medical concern worldwide. The lung infection and respiratory failure that are linked to SARS-CoV-2 can result in considerable mortality and morbidity. Moreover, it has a similar inflammatory effect on different organ systems. The S proteins bind through the S1 subunit to angiotensin-converting enzyme 2 (ACE2) expressed on host cells, but merely binding to ACE2 is not sufficient for cell infection. Viral cell entry requires the transmembrane serine protease 2 (TMPRSS2) expressed on host cells to perform critical protein priming that leads to conformational changes, viral cell entry, and cell infection. Several COVID-19 individuals have been documented to have acute coronary syndrome (ACS). Even though the underlying pathophysiology is yet unknown. The most well-known mechanisms include oxygen

supply/demand imbalance, endothelial dysfunction, prothrombotic activation of the coagulation cascade, and systemic inflammatory response mediated by cytokines. In addition, viral respiratory infections have been linked to a higher risk of MI due to gene expression that is prone to stimulating platelet activation. Further in-depth research on the relationship between COVID-19 and ACS is required to see whether there is a direct causative or

ABSTARCT

Acute heart failure (AHF) is a syndrome defined as the new onset (de novo heart failure (HF)) or worsening (acutely decompensated heart failure (ADHF)) of symptoms and signs of HF, mostly related to systemic congestion. Heart failure typically affects the elderly population, and as life expectancies rise and chronic medical diseases are better managed, more people are projected to develop the ailment. Recent classifications of heart failure include heart failure with diminished and preserved ejection fraction. Heart failure has been treated with a variety of medical and device-based therapies throughout the past few decades. Both in terms of morbidity and mortality, these treatments have improved patient outcomes.

INTRODUCTION

Heart failure (HF) is a chronic condition caused by either inadequate myocardial relaxation, reduced ejection. Heart failure (HF) is a clinical illness characterized by anatomical and functional abnormalities in the myocardium preventing ventricular filling or blood ejection. Reduced left ventricular myocardial function is the most prevalent cause of HF; however, dysfunction of the pericardium, myocardium, endocardium, heart valves, or great vessels, alone or in combination, is also related with HF. Increased hemodynamic overload, ischemia-related dysfunction, ventricular remodeling, excessive neuro-humoral stimulation, abnormal

ABSTRACT

In some women Congenital anomalies can be seen among which abnormal uterine cavity due to formation of septum is common. Due to the formation of this type of uterus many consequences can be observed which includes spontaneous abortions, stillbirths, infertility, preterm delivery and complications during delivery. To overcome this problem a primary and simple surgical technique named hysteroscopic metroplasty was introduced for the safe removal of the septum. The patients did not experience dysmenorrhea and recovered well. Many studies were performed on this technique which concluded that removal of septum in women with both septate uterus and unexplained infertility is beneficial than in women with only unexplained infertility. Fertility and live birth rates were significantly improved, and spontaneous abortions were decreased in women who underwent this

technique.

ABSTRACT

The neuropeptide calcitonin gene-related peptide (CGRP) has long been hypothesized to play an essential role in the pathophysiology of migraine. Although clinical findings are consistent with such a role, the specific pathogenic mechanism of CGRP in migraine remains speculative until recently. Advances in molecular neuroscience are beginning to elucidate the pathogenic mechanism of CGRP in migraine. This article describes the hypothetical role of CGRP in migraine and outlines current knowledge of the molecular mechanism of this neuropeptide in the pathophysiology of migraine. Studies of cultured trigeminal neurons have shown that CGRP is released from trigeminal ganglion cells, CGRP transcription is increased under conditions that mimic neuronal inflammation, migraine drug therapy reduces CGRP release, and CGRP transcription is performed. Inhibits

and shows tumor necrosis factor α (TNF α). Intrinsic inflammatory mediators associated with migraine can stimulate CGRP transcription. Taken together, the results suggest that in migraine, activation of the trigeminal nerve releases CGRP and other peptides that cause the release of pro-inflammatory mediators. These mediators further increase CGRP synthesis and release over hours to days, corresponding to the duration of a typical migraine episode of 4 to 72 hours. Increased synthesis and release of CGRP may be mediated by activation of the mitogen-activated protein kinase pathway. It is regulated by endogenous inflammatory substances such as TNF α and can be affected by drugs such as sumatriptan.

ABSTRACT:

Organophosphate compound (OPC) is one of the most common causes of auto poisoning, seen in India. They are used as insecticides, herbicides, and anti-helminthics which are also used in the chemical industry. The OPCs which are used in the 1940s around world as pesticides were source of poisoning and were keen to cause control problems. OPC poisoning cases are estimated at 3 million annually worldwide with approximately 10% i.e., 300,000 deaths. Of these, about 1 million are accidental and several million were incidental poisoning and suicides. Mortality rates from planned ingestion of OPC insecticides in developing Asian countries are around 20% and can be as high as 70% in some seasons and in rural hospitals. Medical treatment and control of organophosphate pesticide poisoning are difficult, especially in difficult settings where most of these patients are located. Clinical exercise is often less than ideal, with poor preliminary resuscitation, stabilization, and poor antidote use. Decontamination, specific antidotes, and preventive measures remain the mainstay of treatment. This review addresses the mode of action, clinical features, management, complication, and post-mortem findings as well as medical & legal aspects of OPC poisoning.

KEYWORDS: Organic Phosphate Poisoning, Pesticides, Organic Phosphate Compounds, Clinical Features, Management, etc.

INTRODUCTION:

Hundreds of Organophosphate (OP) compounds are present to be had to apply as pesticides¹. OP pesticides inhibit each cholinesterase and Pseudo Cholinesterase activity, as they're irreversible cholinesterase inhibitors. The buildup of acetylcholine at synapses caused by the suppression of cholinesterase activity leads to overstimulation and disruption of neurotransmission in both the central and peripheral nervous systems². These actions appear to be the cause of the nicotinic and muscarinic receptors' heightened manifestations. OP pesticides are one of the maximum vital reasons for poisoning in Asia, as in lots of growing countries³. There are several different ways to be exposed to OP pesticides, including cutaneous, gastrointestinal, inhalational, and intravenous routes⁴. Poisoning takes place because of agricultural use, unintended publicity, suicide, and rarely, homicide^{5,6}. The mortality charge of OP poisoning is high: deadly problem is regularly associated with a put-off in analysis or unsuitable management. Early analysis and appropriate treatment, conversely, are regularly existent saving, despite the fact that the scientific direction of OP poisonings is probably pretty

PHENYTOIN TOXICITY AND IT'S MANAGEMENT - A SYSTEMATIC REVIEW

ABSTRACT

Phenytoin toxicity occurs when serum levels exceed the therapeutic level, leading to symptoms such as nystagmus, slurred speech, and decreased coordination. This toxicity is sometimes caused by drug interactions. Phenytoin is one of the most commonly used anticonvulsants in the developing world, but lack of monitoring and concurrent medications can easily lead to toxicity. Phenytoin toxicity may be brought on by dosage variations, medication interactions, physiologic changes, or intentional overdose. In more severe situations, seizures, a depressed conscious state, and coma may also occur. Nevertheless, nausea and central nervous system dysfunction—particularly disorientation, nystagmus, and ataxia—are the most common symptoms of intoxication. Ingestion of phenytoin rarely results in cardiac problems such arrhythmias and hypotension,

although parenteral administration of phenytoin or fosphenytoin may cause them. Intoxication with phenytoin alone is unlikely to result in death. Zero-order pharmacokinetics can cause a significantly lengthened half-life in overdoses, which can lead to prolonged symptom duration and, consequently, longer hospitalisation with its associated problems. Supportive care is the mainstay of treatment for a person suffering from phenytoin intoxication. No antidote exists, and there is no proof that gastrointestinal cleaning or

ABSTRACT

A xenobiotic that is poisonous to the body is called a poison. Depending on the exposure, poisoning may happen on purpose or by accident. When exposed to the poison for an extended period, illness may take several days, weeks, months, or even years to manifest. Because of its effectiveness and minimal environmental toxicity, paraquat is well known. No matter how much paraquat is consumed, the consequences on the GIT, kidney, liver, lungs, and other organs can be fatal. The fatality/death/mortality rate from intentional/accidental exposure to paraquat increases in the absence of a particular antidote. Thus, we analyzed the literature with an emphasis on paraquat poisoning publications to shed light on its prevalence, clinical manifestations, and death through renal, respiratory, and multi-organ failure/damage.

KEYWORDS: Mortality, Antidote, Multi-organ failure, Renal failure, Respiratory failure, and GIT (Gastrointestinal tract).

INTRODUCTION

Paraquat (1,1'-dimethyl-4,4'-bipyridylium dichloride) is used as a Broad-Spectrum herbicide with low price discovered in 1955 in many developing countries, suicide with the

ABSTRACT

To recognize and document obstacles to medication compliance for secondary stroke prevention. Making sure that patient's take one's medications as prescribed can be difficult for medical professionals. Although medications are more efficient at lowering the risk of subsequent strokes, long-term treatment compliance is low. Studying the rate of adherence to clinical performance measures and adherence to medications for stroke secondary prevention. Patient's with stroke are more likely to have lower levels of adherence to their self-care routines and medications because of polypharmacy and multi-morbidity. According to studies, the high adherence rate may have increased as a result of people's concerns for their health, the fact that they were given good medication education and the encouragement of family members to take their medications. Regarding rising concerns

about drug costs and adverse effects, the lack of social security insurance was the main obstacle to stroke survivors taking their prescribed medications. Worrying about taking medications for a long time was the most significant barrier among the significant concerns about medications that had increased (related to worry, disruption, long-term effects, and medication dependence).

ABSTRACT

Post-stroke neuropsychiatric complications are a group of mental health disorders that can occur following a stroke. These complications can include depression, anxiety, psychosis, cognitive impairment, and behavioral changes. They can have a significant impact on the recovery and quality of life of stroke survivors, as well as their caregivers and families. Research has shown that post-stroke neuropsychiatric complications are common, affecting up to 50% of stroke survivors. The underlying mechanisms of these complications are not fully understood, but it is believed that they result from a combination of biological, psychological, and social factors. Effective treatment of post-stroke neuropsychiatric complications requires a multidisciplinary approach that includes medication, psychotherapy, and rehabilitation. Early recognition and management of these

complications are crucial to improve outcomes and prevent long-term disability. In conclusion, post-stroke neuropsychiatric complications are common and have a significant impact on the recovery and quality of life of stroke survivors. It is important for healthcare providers to recognize and treat these complications early to improve outcomes and prevent long-term disability.

ABSTRACT:

Neurocardiology is an emerging field that studies the interaction between the brain and the heart, especially the effects of brain damage on the heart and the effects of cardiac failure on the brain. Early diagnosis of cardiovascular dysfunctions induced directly by stroke has increased. The existence of a two-way relationship between the brain and the heart is now universally acknowledged by researchers. This hypothesis is supported by the fact that stroke patients are most susceptible to serious cardiac complications. The primary pathological mechanisms responsible for brain-heart axis dysregulation following stroke have been identified as sympathetic hyperactivity, hypothalamic-pituitary-adrenal axis, immunological and inflammatory responses, and gut dysbiosis. Furthermore, research has shown that the main causes of mortality after stroke are heart attacks, congestive heart failure, hemodynamic instability, left ventricular systolic dysfunction, diastolic dysfunction, arrhythmias electrocardiographic anomalies, and cardiac arrest, all of these conditions are more or less linked to poor outcomes and death.

Keywords: Cardiovascular dysfunction, brain-heart axis, gut dysbiosis, inflammation, congestive heart failure

INTRODUCTION:

Cerebrovascular disease patients frequently have cardiac damage ^[1]. Heart injury results in serious complications as such early clinical deterioration and death by stroke. Stroke is a common complication of heart disease and vice versa ^[2]. Stroke (ischemic stroke, transient ischemic stroke(TIA), hemorrhagic stroke, and subarachnoid hemorrhage (SAH)) induces neurovascular uncoupling and disrupts cerebral auto-regulation, which then renders cerebral blood flow directly dependent upon cardiac function ^[1]. Acute brain injury can cause cardiac dysfunction even in the absence of cardiac illness, which can increase mortality and result in cardiac complications such as heart failure, which in turn can increase mortality and lead to cardiac complications, such as heart failure, reversible damage such as neurogenic stress cardiomyopathy (NSC), and Takotsubo cardiomyopathy ^[3,4]. This review aims to focus on mechanisms involved in heart and brain interaction in stroke patients.

ABSTRACT

Antimicrobial resistance and its cost of use increases as a result of excessive and improper antibiotic usage which has become a global health issue. As a result, several strategies aiming at improving antibiotic therapy have developed up to this point. The goal of this study is to assess rational antibiotic usage and the influence of new limitation policies, as well as their reinforcement by infectious disease specialists, on hospital-wide antibiotic use. Individual difficulties stemming from unreasonable drug usage can have a long-term harmful impact on public well-being. Antibiotics are the most commonly used inappropriately, and thus disrupts the long-term sustainability of health gains in terms of both cost and productivity. There are currently worldwide and regional guidelines for establishing a government structure dedicated to monitoring and improving medicine use, as well

as conducting a national situation analysis in order to design a strategy. In response to country requests, the WHO Regional Office for Southeast Asia is currently conducting national situational studies to assist countries in developing coordinated action plans. After the study, it was concluded that antibiotic use was reduced and sensible antibiotic prescriptions were increased in hospitals as a result of the restricted policy.

ABSTRACT

In the realm of dementia care, complementary medical therapy has sparked a lot of interest, and aromatherapy and essential oils are becoming more popular. Although essential oils from plants have been used therapeutically for hundreds of years to improve physical and psychological well-being, there is little empirical evidence of their efficacy. The therapeutic use of essential oils is predicted to drive the increase, which will likely result in a surge in demand for aromatherapy goods. The results of essential oils in relevant in vitro and in vivo models are supported by evidence from mechanistic, neuropharmacological research. It's no longer a secret that aromatherapy is a likely successful Alzheimer's treatment. Following the completion of clinical studies, a potentially effective and safe medication for psychiatric diseases, including Alzheimer's disease, is now available. Aromatherapy is a non-pharmaceutical dementia

treatment that has been shown to be effective. Aromatherapy may help people with Alzheimer's disease improve their cognitive function.

KEYWORDS: Alzheimer's Disease (AD), Behavioral and Psychological Symptoms of Dementia (BPSDs), Essential oil (EO).

& Certified by ISO 9001:2015

LIST OF CONFERENCES / WORKSHOPS / SEMINARS PARTICIPATED BY THE STUDENTS

Name of the conference/Workshops /Seminars	Outcome
APP 1 st Indo-Canadian International conference organised by Vijaya Institute of Pharmaceutical Sciences for women, Vijayawada on Aug 2023.	Gained knowledge in diverse aspects related to pharmacy practice including pharmaceutical technology
APP 9 th Indo-West Indies International conference organised by Vijaya Institute of Pharmaceutical Sciences for women, Vijayawada on March 2023.	Improved Thinking ability and Presentation Skills and gained knowledge in pharmaceutical sciences and pharmacology.
National level Review article writing competition organized by Academic Decipher , Mumbai on March 2023.	Secured Knowledge in writing review and research articles
International seminar on Role and future prospects of Regulatory affairs conducted by A S N college of Pharmacy , Tenali on Feb 2023.	Gained information on Good Regulatory practices and future aspects
International conference on Insights on current challenges and strategies in Pharmaceutical and Translational research organised by Priyadarshini Institute of Pharmaceutical Education and Research on Dec 2022.	Improved Research strategies in Pharmaceutical Technology.
International e poster competition organised by Anti Viral Research Society on Dec 2022	Gained Knowledge on New advances in Pharmacy.
National Conference on Progressive & Innovative Approach to Explore Research in Pharmacy	Improved knowledge about Research Innovations in Pharmaceutical field.

CERTIFICATE OF AWARD

This certificate is extended to

Ms. Mulaka Vyshnavi

B-pharm IV year, VIPW

for winning '1st/2nd/3rd prize' in oral/poster competition during

APP 9th Indo-West Indies International Conference

Theme: *Pharmaceutical Sciences in Global Scenario: A Focus on Pharmacological Perspectives*
organized by APP Telangana State Branch & APP West Indies International Branch
at Vijaya Institute of Pharmaceutical Sciences for Women, Vijayawada, Andhra Pradesh
in collaboration with APP Molecular Pharmacology Division
on 24th & 25th day of March 2023, in the commemoration of 'World Tuberculosis Day'.

Dear reader friends,

Good News. Amidst the war strife surrounding the planet, here is something encouraging. The ozone layer is recovering. There is progress seen in the global efforts to restore the protective layer high in the stratosphere which protects planet earth and people from the dangerous ultraviolet radiation. The harmful radiation is found to

cause skin cancer and is harmful to plants and animals too. The ozone layer is now back to 1980s level, much to the relief of mankind. It is also evidence of the collective action of humanity against the global threat to our environment. Henceforth, there is a solution to the climate crisis, and it should be a consistent and sustained effort in gifting something precious to the next generations.

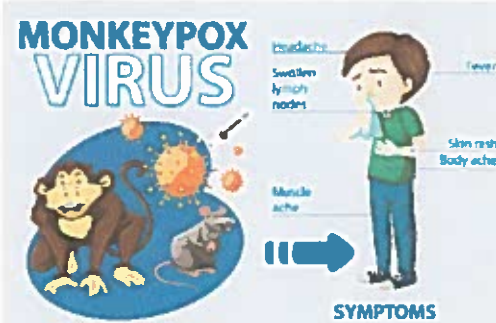

MONKEY POX - WORLD'S LATEST HEALTH THREAT

A zoonotic viral disease, Monkeypox gets its name from the fact that it can be transmitted from animals—including monkeys, squirrels, and rodents to humans through direct contact with blood, body fluids, and the lesions of a diseased animal. Monkeypox has taken the globe by a storm since its outbreak in May this year. The first case of the human monkeypox virus was confirmed by the United Kingdom Health Security Agency (UKHSA) in an individual traveling back from Nigeria on 7th May 2022. As the cases rise globally, so does the worry of people. More than 35,000 cases of monkeypox have been documented in 92 countries and territories, by World Health Organization (WHO). In the present situation, testing is limited (accessibility of tests as well as willingness to get tested), vaccines exist but are unlikely to be available promptly, and medicines such as antivirals are yet to be approved and are not widely available. MPXV is a double-stranded DNA virus that belongs to the orthopox virus genus and Poxviridae family. It is a 200 to 250 nm large, enveloped, cytoplasmic virus that can enter the host cell through binding to glycosaminoglycans.

TRANSMISSION

Human-to-human monkeypox spread can occur through contact with respiratory droplets, skin lesions, dry scabs, fomites, and sexual contact. Transmission from an infected mother to her foetus can also take place. It tends to be less severe than smallpox, with an incubation period of 6 to 13 days (but up to as many as 21 days) and symptoms that can last for 2 to 4 weeks. It typically causes fever with a rash but its distinguishing feature from smallpox, measles, and chickenpox is the

presence of lymph node swelling and its distinctive rash. The current case fatality ratio ranges from 3 to 6 percent but it may go up to 11 percent, and it can be higher among

children. Monkeypox diagnosis is conducted through polymerase chain reaction (PCR) tests from skin samples. Monkeypox is usually a self-limited disease with symptoms lasting from two weeks to four weeks. Most people with monkeypox get better on their own without treatment.

PREVENTION

A smallpox vaccine provides protection against monkeypox, but its use is currently limited to clinical trials. The best way to help prevent the spread of monkeypox virus is to:

- Avoid contact with infected animals (especially sick or dead animals).
- Avoid contact with bedding and other materials contaminated with the virus.
- Thoroughly cook all foods that contain animal meat or parts. Wash your hands frequently with soap and water.
- Wear a mask that covers your mouth and nose when around others.

VIJAYA INSTITUTE OF PHARMACEUTICAL SCIENCES FOR WOMEN

ECOPHARMACOVIGILANCE

Ecopharmacovigilance (EPV) can be defined as the science and activities concerning detection, assessment, understanding and prevention of adverse effects or other problems due to the presence of a pharmaceutical product or by product in the environment. Studies have found that hormones, antibiotics, analgesics, tranquilizers, antihypertensives, antiepileptics, antidepressants, lipid regulators and anticancer drugs that were given therapeutically to humans and animals were detected in alarming levels in surface water and ground water.

Examples of environmental exposure due to pharmaceuticals :

- Population of 3 species of vultures declined until they were considered critically endangered due to exposure to diclofenac causing kidney failure when they consume carcasses of animals that were treated with diclofenac.
- Levonorgestrel can cause sterility in female frogs. Female tadpoles exhibited immature ovarian egg cells and lacked oviducts, entailing sterility.
- Ethinyl-estradiol causes feminization of male fish by inducing synthesis of vitellogenin, an estrogen receptor-mediated response, occurring naturally in female fish.
- Fluoxetine and norfluoxetine bioaccumulate in fish and adversely affect reproduction, growth and behavior. In shrimps it causes them to put themselves in mortal danger.
- Antibiotic resistance developed in bacteria found naturally in the environment which in turn passes on to the bacteria that cause infections in humans.

METHODS USED IN ECO PHARMACOVIGILANCE

- Clinical trial is the main method employed to gather information on a drug in the premarketing phase but is insufficient to evaluate drug risks.
- Spontaneous reporting aims to serve as an early detection of signals of new, rare and serious ADRs.

- Intensive monitoring, database studies comprising case-control and cohort studies.
- Environmental Risk Assessment (ERA) of drugs is submitted by the manufacturer to FDA if the risk assessment shows concentrations less than one ppb, the drug is assumed to pose acceptable risks.
- Resource Conservation and Recovery Act (RCRA) regulates and tracks the disposal of solid waste, and provides rules for industries that generate, transport, store and dispose hazardous waste. Approximately 5% of all pharmaceutical agents are considered "RCRA hazardous."
- Risk mitigation measures (RMMs) can be applied to improve the prevention of exposure and the protection of the environment and risk indication within the ERA (i.e., RQ = 1), to reduce the risk quotient with a follow-up step of the RQ calculation.
- The methodologies of EPV also include green drug design, green chemistry, development of biodegradable goods, minimization of manufacturing emissions, supervision of unused or expired drugs, increased efficiency of sewage treatment, development of better drug disposal systems and a dynamic update mechanism.

CONCLUSION :

- The general awareness about EPV and disposal of drugs is very low in Indian population. Necessity of EPV is absolute in India after considering the immense pharmaceutical activity and environmental contamination. Appropriate curriculum change attending to training on drug disposal is very essential to the healthcare professionals. EPV is equally important as PV and needs regular monitoring to ensure safety of environment, resources and human health.

NOVEL DRUG APPROVALS FOR 2022

DRUG NAME	ACTIVE INGREDIENT	APPROVAL DATE	USES
Voquezna	Vonoprazan, Amoxicillin, and Clarithromycin	03.05.22	To treat Helicobacter pylori infection
Mounjaro	Tirzepatide	13.05.22	To improve blood sugar control in diabetes, in addition to diet and exercise
Vtama	Tapinarof	23.05.22	To treat plaque psoriasis
Amvuttra	Vutrisiran	13.06.22	To treat polyneuropathy of hereditary transthyretin-mediated amyloidosis
Xenpozyme	Olipudase alfa	31.08.22	To treat Acid Sphingomyelinase Deficiency

VIJAYA INSTITUTE OF PHARMACEUTICAL SCIENCES FOR WOMEN

SOCIAL MEDIA AND MENTAL HEALTH

The use of social media exacerbates issues with mental health, because humans are social creatures, they need the company of others to advance in life. As a result, interacting socially with others can help people cope with their stress, worry, and melancholy, while lack of social interaction can seriously harm one's mental health. People now use social media on a regular basis, many of them spend hours on messenger, Instagram, Facebook, and other well-known platforms. As a result, a large number of academicians and researchers have been investigating how social media and related apps affect various facets of people's life.

SOCIAL MEDIA AND MENTAL HEALTH

PROS

- Can communicate / stay in touch
- Chance to meet new people
- Can help you to soothe

CONS

- Can lead to poor mental health
- Can cause cyberbullying & harassment
- Can lead to depression

SIGNS THAT SOCIAL MEDIA IS AFFECTING YOUR HEALTH

- Feelings of inadequacy
- Cyberbullying
- Feelings of isolation
- Obsessive use

Additionally, there will be 4.70 billion social media users globally in 2022, or 59.0 percent of the world's population. This represents an average rate of more than 7 new users every single second, or annualized growth of 5.1 percent. Facebook continues to be the most popular platform in the world. It is followed by Youtube (2.476 billion), WhatsApp (2 billion), Instagram (1.440 billion), Telegram, Snapchat, Twitter, and Pinterest.

Although social media has many pleasurable and good aspects, it can also have a negative impact on mental health. Age was not found to be a factor in previous studies, but women were found to be far more likely to experience mental health sickness than men.

Mental health is characterized as a condition of wellbeing in which individuals are aware of their capacities, successfully navigate through daily challenges, perform well at work, and significantly improve the quality of life in their communities. Social media's link to mental health may be explained by the Displaced Behavior Theory. The idea contends that persons who engage in sedentary activities like social media use more frequently spend less time engaging in face-to-face social interaction, both of which have been shown to be protective against mental illnesses. Social theories, on the other hand, discovered that using social media negatively impacts mental health by altering how users perceive, manage, and engage with their social network.

Numerous studies on social media's effects have been undertaken, and it has been found that frequent usage of sites like Facebook may contribute to the unpleasant signs and symptoms of melancholy, anxiety, and stress. Teenagers who are anxious about losing something on social media may strive to respond to and check all their friends' messages on a regular basis. The association between depression and passive social media use, such as reading postings, is stronger than the association between depression and active use, such as posting.

It is difficult to determine whether a mental health issue appeared more pronounced in those who used social media more frequently compared to those who used it less frequently or not at all because only three longitudinal studies examined the causal relationship between social media and mental health. Social media envy can have an impact on people's levels of anxiety and sadness. There are many additional possible causes of anxiety and sadness that need to be investigated.

By using reframing strategies, practitioners can provide clients effective therapeutic interventions and modalities like Cognitive Behavioral Therapy (CBT) to address symptoms of depression, low self-esteem, and anxiety. Offering psychoeducation on the potential effects of social media on mental health, both positive and negative is another good solution. Education about the negative effects of social media on mental health may give family systems new approaches to dealing with social media addiction.

CONCLUSION :

According to the studies reviewed, it can be concluded that social media is one of the eye factors to produce a mental health problem in patients especially teenagers, and office workers. Most common issues include anxiety, stress, depression, melancholy, low self-esteem etc.

People are using social media more frequently as their primary means of communication with friends and family as a result of the technological breakthroughs of the twenty-first century. The negative effects are frequently associated with low self-esteem, greater rates of sadness, and anxiety. On the other hand, social media use has been shown to promote social support and connection, according to practitioners.

CAMPUS NEWS

- On 8th May 2022, an awareness session on 'Women's Health Issues' was organized for young mothers during Mothers' Day Celebrations at GGH, Vijayawada, followed by distribution of fruits and clothes to them. Hospital staff and collector also were honored.
- On May 20th & 21st, 2022, Indo-Swiss Virtual International Conference on "Current Scenario And Challenges in Pharmacy Practice & Pharmaceutical Sciences" was organized.
- On July 23rd 2022, a talk on Career Guidance was delivered by Mr. Gupta, Superwhizz, Vijayawada
- On Aug 4th 2022, PharmD students participated in awareness program in various schools. The purpose of the program was to sensitize the students about the importance of healthy diet and hygienic measures to prevent infections and promote better health.
- On Aug 10th -11th, 2022, 7th Indo-Caribbean International Conference on Global Advances and Issues in Pharmaceutical Education and Research organized on the campus led to new deliberations in Pharmacy education.
- Independence Day Celebration (Azadi Ka Amrit Mahotsav) - The 75th Independence Day celebrations were observed in the college by conducting various programmes like patriotic song competition, rally, singing of national anthem and uploading the videos on government portals.
- On 29th Aug 2022, Srilakshmi from Vth PharmD, received gold medal in yoga competitions conducted on the occasion of National Sports Day celebrations at Amaravati.
