## Objective

Pharmaceutical sciences combine scientific aspects that are critical in the development and manufacture of new drugs, handling of medicines and medical devices. Pharmacology is the science of how drugs act on biological systems and how the body responds to the drug. The study of pharmacology encompasses the sources, chemical properties, biological effects and therapeutic uses of drugs. Pharmacy uses the knowledge derived from pharmacology to achieve optimal therapeutic outcomes through the appropriate preparation and dispensing of medicines. Pharmacology integrates the knowledge of many disciplines, including medicine, pharmacy, dentistry, nursing, and veterinary medicine. This integrative nature allows pharmacology to make unique and significant contributions to human health. Pharmaceutics and Pharmaceutical Technology is concerned with the design and formulation of drugs into different dosage forms. It is also associated with the development of new drug delivery systems that ensure drug efficacy with minimal side effects. In the present conference, pharmaceutical experts from various international/national organizations will address the diverse aspects related to pharmaceutical sciences including pharmacology.

### Cancer, genetics and epigenetics

Examples of key cellular pathways disrupted in human cancers by genetic and epigenetic mechanisms

Pathway	Example of genetic alteration	Example of epigenetic alteration
Self-sufficiency in growth signals	Mutation in <i>ras</i> gene	Methylation of <i>RASSF1A</i> gene
Insensitivity to antigrowth signals	Mutation in <i>TGF-β</i> receptors	Down regulation of <i>TGF-β</i> receptors
Tumor invasion and metastasis	Mutation in <i>E-cadherin</i> gene	Methylation of <i>E-cadherin</i> promoter
Limitless replicative potential	Mutation in <i>p16</i> and <i>p15</i> genes	Silencing of <i>p16</i> or <i>p15</i> genes by promoter methylation
Sustained angiogenesis		Silencing of <i>thrombospondin 1</i>
Evasion apoptosis	Mutation in <i>p53</i>	Methylation of <i>p16</i> , <i>p21</i> , <i>p27</i> , and <i>p53</i>
DNA repair capacity	Mutation in <i>MMR1</i> , <i>MML2</i>	Methylation of <i>hMLH1</i> , <i>hMLH2</i> , <i>hMSH1</i> , <i>hMSH2</i>
Maintaining genomic stability	Mutation in <i>CBP</i>	Methylation of <i>CBP</i>
Protein ubiquitination functions regulating mitotic control genes	Mutation in <i>APC</i>	Methylation of <i>CYP</i>

TGF-β: transforming growth factor-β; BAP1: breast-associated protein kinase

### Epigenetics

The diagram illustrates the concept of epigenetics. On the left, a family tree shows how epigenetic marks can be passed from one generation to the next. In the center, a chromosome is shown with a DNA double helix wrapped around a nucleosome. On the right, a detailed view of the DNA helix shows methyl groups (represented by blue circles) attached to the DNA backbone, which can influence gene expression without changing the underlying DNA sequence.

## Objective

Pharmaceutical sciences combine scientific aspects that are critical in the development and manufacture of new drugs, handling of medicines and medical devices. Drug design is the inventive process of finding new medications based on the knowledge of a biological target. Pharmaceuticals and Pharmaceutical Technology is concerned with the design and formulation of drugs into different dosage forms. It is also associated with the development of new drug delivery systems that ensure drug efficacy with minimal side effects. Pharmacognosy is the study of drugs isolated from natural sources, including plants, microbes, animal tissues, and minerals. Medicinal chemistry is a branch of organic chemistry that specializes in the design and chemical synthesis of drugs used in medicine. In the present conference, pharmaceutical experts from various international/national organizations will address the diverse aspects related to pharmaceutical education and research.
