Director, NTA

#### **Important Instructions**

1. The NTA Score of a candidate indicates the percentage of candidates who have scored EQUAL TO OR BELOW (same or lower raw marks)that candidate in that session.

2. The NTA scores of a Candidate have been calculated as follows:

100XNumber of candidates appeared in the 'Session' with raw score EQUAL TO OR LESS than the candidate

Total number of the candidates appeared in the 'Session'

NTA score is not the same as percentage of marks obtained.

3. A National Merit Ranking (All India Rank) has been arrived on the basis of NTA Score.

4. Candidates having same Score shall be listed in a chronological (ascending) order as per their date of

5. Candidates laving same score would be given the same Merit, and the Merit number would be increased by the same runner i.e. if there are two candidates at Merit 2, Merit 3 would not awarded to the students for allotment of the admission of the students for allotment of the students for all the students for all

the AICTE approved programs along with the other criteria that may exist, as applicable RINCIPAL 7. Candidate & particulars mouding Category and Person with benchmark Disability PyRD) Tays indicated as mentioned by the candidate in the online application form.

8. Instances of incorrect information provided by the candidates, if detection of the candidates and the candidates are detected as the candidates. would make the candidate liable for disqualification. ENIKEPADU, VIJAYAWADA - 521 101 6/21/24, 6:58 PM about:blank

## **ELETTER OF APPOINTMENT**

#### Dear D RESHMA,

Referring to your recent interview for the position of Business Executive, we are pleased to offer you the position with our company, ARIAAN PHARMACEUTICALS, effective from 12/08/2024 under the following terms and conditions:

Your employment shall commence on 12/08/2024. You shall receive starting annual compensation package on Total Fixed Cost of INR 1,90,800/- inclusive of basic salary, all taxable and non taxable allowances and other statuary payments.

Probation: You will be on probation for a period of six months from the Joining Date, which can be extended at the discretion of the Management. Your employment may be terminated without cause or notice during the probationary period.

We believe that ARIAAN PHARMACEUTICALS offers an outstanding opportunity for you to achieve both our personal and professional goals in an exciting scientific and business environment. It is our goal to become a major, fully integrated healthcare products company and we eagerly forward to your joining this effort

We congratulate you on your appointment, and kindly ask you to review these conditions. Please reply with your acceptance or declination within a week.

Note: For the first six months there will be no leaves (i.e. Probationary Period)

Near old ADB BANK RAJUPETA TIRUVURU. 521235.

Dear Ms. Kothagundla Bhavani Tulasi,

## **Sub: Letter of Appointment**

We are pleased to offer you an appointment in our organization on the following terms and

- 1 Your date of commencement of service is: 04-Nov-24. Team member ID CHHYD9258,
  Designation: Jr. Executive Coding Services, File No 8902, Place of posting: # Hyderabad
- 2 You will be entitled to a CTC of Rs. 25000 (Rupees Twenty Five Thousand Only) per month till the confirmation, which would be subject to revision periodically based on your performance.

  Ref Annexure Ax
- You will be eligible for other benefits in accordance with the company's rules and statutory benefits, if any applicable to you from time to time. You will also be entitled to leave, ESIC, PF and Gratuity and as per Act. Your Performance Review will be done on a yearly basis. Remuneration paid to you shall be subject to Tax Deduction at Source as per the rules applicable at the time of disbursement.
- Team members will be on probation for the first 6 months from the date of joining. During probationary period, either party has right to terminate the services of the team members with 15-day notice. At the end of probation period (6 months), if the performance of the Team member is found satisfactory, his/her services will be confirmed based on the inputs from the functional heads. No salary revision will be done during confirmation. If functional heads propose to initiate separation due to non-performance, we will place them on bench for 15 days and relieve them at the end of 15 days. Team member is eligible to avail One leave per month during probation. In certain cases, if the Team member's performance is found unsatisfactory at the end of the probationary period due to performance issues, extension of period of probation letter will be issued. If a team member is sponsored for any certification during this period, their mandatory work agreement will precede this probation clause and they will not be covered under this policy. They will have to complete the mandatory work period mentioned in the certification agreement.
- We waive off notice period only on serious medical conditions, which are substantiated with medical documents such as hospitalization records, discharge summary, scan report, blood test reports. We will send them to our medical panel and once they validate and approve the documents, improve the restriction and will be initiated. Handwritten documents are not accepted.

Harshitha Viswanadhapalli

JD nagar, JD towers Auto Nager Gate Vijayawada 520010

Dear Harshitha Viswanadhapalli,

We are pleased to extend an Offer to join Accenture Solutions Private Limited in our Accenture Operations Delivery Centers in India, as per the terms and conditions of the offer letter and its accompanying annexures:

Management Level - 13
Sub Level - 3
Job Title - Trust & Safety New Associate
Job Family Group - Business Process Delivery
Business Deal - Non - Contact Center
At this stage we expect you to join us at Hyderabad

You will be expected to work from the office location tagged to your project/role/client (referred as your Accenture Base Location). Accenture Base Location will be considered for all administrative & operational/official purposes. Exceptions if any/granted, will be interim / temporary, and will be subject to review with HR/business/client. The Company reserves the right to ask you to come to office locations pursuant to our business needs and client requirements. Working remotely is subject to business requirement and your agreeing to terms of the Remote working conditions listed in the attached Declaration. This offer is contingent to the above-mentioned agreement.

### ANNEXURE AND TERMS OF EMPLOYMENT DETAILS

#### Please refer to:

- Annexure 1 for the compensation and benefits details.
- Annexure 2 for documentation to be submitted by you.
- Annexure 3 for Remote Working Conditions Declaration to be submitted by you.
- Annexure 4 for Declarations to be submitted by you.
- Annexure 5 for the Terms of Employment, Compensation Plan and Car Lease Scheme.

Your employment with the Company will be governed by the attached Terms of Employment. You are required to carefully read and understand these Terms of Employment as a part of accepting this Offer.

Candidate's Signature:{{Sig\_es\_:signer1:signature}}

Please note that after joining the Company you may be required to undergo further trainings, assessments and verifications and your employment with the Company shall be subject to successful completion of such trainings, verifications and assessments.

As further detailed in the Terms of Employment, this Offer and your employment with the Company is subject to satisfactory completion of verification and/or background or reference checks, which may occur at any time prior to or after the effective start date of your employment. Further, at the time of joining you are required to provide all documentation identified in Annexure 2.

To indicate your acceptance of this offer and employment with Accenture, please submit a copy of this letter and all relevant Annexures with your signature on each page. In addition, please provide all the documentation identified in Annexure 2.

Post accepting this Offer, you are required to submit certain prerequisites / documents (Refer Annexure). The Offer will be contingent upon successful verification of your documents against the Employment Application Form submitted by you. Accenture may, at its sole discretion, elect to suspend or revoke your offer immediately in case of failure to submit the documents or any mismatch/misrepresentation in information shared by you.

On joining you may undergo a training program to acquire the knowledge to enable you to successfully perform to the expectations of the position for which you are being considered for employment. This offer and your employment with the Company are contingent upon you successfully completing the training program as per the satisfaction of the Company. Failing which, the Company may, in its sole discretion, elect to terminate or suspend your employment immediately.

In the event a government body/authority exercising its jurisdiction and statutory power/authority seeks information pertaining to any aspect of your employment, the Company shall provide such information to the government body/authority without any notification to you. The foregoing shall be applicable to information pertaining to your employment being shared in pursuance of statutory requirements/compliance. You may belong to this category and your details will be disclosed to these authorities.

After acceptance of the offer of employment or any time during the course of your employment with the Company you may be required to undergo drug/alcohol/substance test/and/or any other verifications based on the project you are deployed. This offer and your employment with the Company are contingent upon you completing particular tests/and/or any other verifications as per the requirements of the Company and in the instance of failing these tests namely the drug/alcohol/substance test/and/or any other verifications, the Company may, in its sole discretion, elect to terminate or suspend your employment immediately.

At Accenture, the health and well-being of our people, our clients and the community is our top priority. Before onboarding, we encourage you to take both doses of the COVID-19 vaccine.

This offer is contingent upon successful completion of your current degree, awarded in the current academic year. You are required to produce the original pass certificate / mark sheet upon joining the Company but no later than six months of your start date in the Company, falling which, the Company may, in its sole discretion, elect to terminate or suspend your employment immediately.

This offer is contingent on us working together to determine an appropriate start date for your employment. The terms of this letter and this offer are valid for seven (7) days from the date of this letter. If we do not receive the above requested documents from you before the expiration of this period or after receiving your acceptance of this offer if you do not join the Company on a mutually agreed date of joining, or if, we are unable to set an alternative date, the terms of this letter and this offer will be deemed to have been rejected by you, unless otherwise communicated to you by the company in writing. The Company at its sole discretion (including but not limited to unforeseen circumstances like a pandemic or natural calamities) may extend or defer the start date of your joining, for which deferment you will be duly informed. Your joining date and employment with the Company will then start from such deferred/extended date. The start of employment with the Company will be the date on which you have joined the company i.e. onboarding date.

- 1 Your date of commencement of service is: 18-Jul-24. Team member ID CHHYD8157,
  Designation: Jr Executive-Coding Services, File No 7842, Place of posting: # Hyderabad
- You will be entitled to a CTC of Rs. 18000 (Rupees Eighteen Thousand Only) per month till the confirmation, which would be subject to revision periodically based on your performance. Ref Annexure A
- You will be eligible for other benefits in accordance with the companys rules and statutory benefits, if any, applicable to you from time to time. You will also be entitled to leave, ESIC, PF and Gratuity and as per Act. Your Performance Review will be done on a yearly basis. Remuneration paid to you shall be subject to Tax Deduction at Source as per the rules applicable at the time of disbursement.
- Team members will be on probation for the first 6 months from the date of joining. During probationary period, either party has right to terminate the services of the team members with 15-day notice. At the end of probation period (6 months), if the performance of the Team member is found satisfactory, his/her services will be confirmed based on the inputs from the functional heads. No salary revision will be done during confirmation. If functional heads propose to initiate separation due to non-performance, we will place them on bench for 15 days and relieve them at the end of 15 days. Team member is eligible to avail One leave per month during probation. In certain cases, If the Team member's performance is found unsatisfactory at the end of the probationary period due to performance issues, extension of period of probation letter will be issued. If a team member is sponsored for any certification during this period, their mandatory work agreement will precede this probation clause and they will not be covered under this policy. They will have to complete the mandatory work period mentioned in the certification agreement.
- We waive off notice period only on serious medical conditions, which are substantiated with medical documents such as hospitalization records, discharge summary, scan report, blood test reports. We will send them to our medical panel and once they validate and approve the documents, immediate relieving will be initiated. Handwritten documents are not accepted as valid documents.

Ms. A Vara Lakshmi

**Subject: Offer Letter** 

Dear A Vara Lakshmi,

Based on your interview with us, we are pleased to extend you an offer to join Aquity Solutions India Private Limited (hereinafter referred to as "the Company" or "Aquity Solutions") as **Medical Scribe Trainee** at its office located at **vizag** in the state of Andhrapradesh.

We welcome you to Aquity Solutions, and we are confident that you will enjoy being a part of it, as much as we shall cherish our association with you. This Offer Letter confirms your total emoluments and other terms of your employment, which if accepted by you, will be as follows:

- 1. Your Annual Cost to the company (CTC) shall be Rs. 420012/- only (Rupees Four Lakh Twenty Thousand Twelve only) and the same will be structured as per the attached Annexure I.
- 2. You shall join us on or before 14-Aug-2024 failing which the offer will be void.
- 3. This Offer Letter and your employment with Aquity Solutions shall be subject to satisfactory Background Verification Report as per the Company's process.
- Your employment with Aquity Solutions will be governed by your Appointment Letter, which will be issued to you at the time of your joining.
- Your services with the Company will be subject to a probation period of three (3) months from the date of your joining, during which period your performance would be monitored and evaluated prior to confirming your services with the Company.
- 6. The terms of this Offer Letter are valid for seven (7) days from the date of this letter. If we do not receive your acceptance of this offer, the terms of this letter and this offer will be deemed to have been rejected by you unless otherwise communicated to you by the Company in writing.
- 7. Please provide all the documentation as listed in Annexure II, on or before joining the Company.
- 8. To indicate your acceptance of this Offer Letter, please sign and return a duplicate copy of this letter.

We look forward to hear from you regarding your decision to join Aquity Solutions. You are expected to keep this offer strictly confidential. In case, you have anything you would like to discuss further, please feel free to get back to us on the same.

We wish you a successful career and look forward to your joining us.

Sincerely yours,

#### Objective

Pharmaceutical sciences combine scientific aspects that are critical in the development and manufacture of new drugs, handling of medicines and medical devices. In the most basic sense, drug design involves the design of molecules that are complementary in shape and charge to the biomolecular target with which they interact and therefore will bind to it. Drug design frequently but not necessarily relies on computer modelling techniques. Pharmacology is the science of how drugs act on biological systems and how the body responds to the drug. The study of pharmacology encompasses the sources, chemical properties, biological effects and therapeutic uses of drugs. Pharmacy uses the knowledge derived from pharmacology to achieve optimal therapeutic outcomes through the appropriate preparation and dispensing of medicines. Medicinal Chemistry is the science that deals with the discovery or design of new therapeutic chemicals and their development into useful medicines. Pharmaceutics and Pharmaceutical Technology is concerned with the design and formulation of drugs into different dosage forms. In the present conference, pharmaceutical experts from various international/national organizations will address the diverse aspects related to pharmaceutical sciences.

#### Objective

Pharmaceutical Sciences is a dynamic and interdisciplinary field that aims to integrate fundamental principles of physical and organic chemistry, engineering, biochemistry, and biology to understand how to optimize delivery of drugs to the body and translate this integrated understanding into new and improved therapies against human disease. Pharmaceutical practice encompasses everything, which is related to availability of medicines, access and use at the individual and the population levels. Pharmacy practice encapsulates the research, development, formulation, distribution, access and clinical use of medicines. Pharmacy uses the knowledge derived from pharmacology to achieve optimal therapeutic outcomes through the appropriate preparation and dispensing of medicines. Pharmaceutics and Pharmaceutical Technology is concerned with the design and formulation of drugs into different dosage forms. It is also associated with the development of new drug delivery systems that ensure drug efficacy with minimal side effects. In the present conference, pharmaceutical experts from various international/national organizations will address the diverse aspects related to pharmacy practice including pharmaceutical technology.

#### **ABSTRACT**

The most common treatment modes of cancer include chemotherapies along with other modes of treatment. But often resistance is developed and gruels towards the discovery of new modes of treatment for cancer. Natural products are used for ages in the treatment. One such component is thymoquinone (TQ). It has been extensively studied against cancer, especially in treating breast cancer. The review article updates its status on research against breast cancer and triple negative breast cancer. The paper describes various breast cancer (BC) treatment options in combination with TQ or alone such as heat shock 70-kDa protein 6 (HSPA6) situated on human chromosome in inhibition of BC growth, MMP-9 and MMP-2 as biomarkers in BC, use of cancer stem cells in vascular formation in solid tumor by VM (vascular mimicry) via MMP-2 and MT1-MMP genes upregulation, use of exosomes extracted from adipocyte-derived mesenchymal stem cells, cancer immunotherapy or immuno-oncology where natural killer lymphocyte cells are used to enhance innate immune response against tumors and pathogens, use of (TRAIL) tumor necrosis factor-related apoptosis-inducing ligand agonists, drugs with synergistic activity, identifying targeted genes IL17RD, and diet having natural molecules that can act potentially against cancer. The article also updates on research associated with TQ in overcoming hindrances related to its poor bioavailability making it an effective clinically acting drug molecule. Recent research indicates that TQ can be a successful candidate to eradicate cancer through its clinical interventions followed by drug design studies.

Keywords: Thymoquinone; triple negative breast cancer; therapy.

#### INTRODUCTION

ancer ranks one of the leading causes of mortality all-inclusive after myocardial localized necrosis. Radiation therapy. hormonal therapy, chemotherapy, targeted therapy, and traditional pharmaceutical adjuvant therapy are all used in the treatment of cancer, however, viability strides to advantage the patients yet. Tumour metastasis process and treatment options have emerged as the foremost broadly investigated theme. In line with the World Health Organisation reports 2021, it is the foremost common cancer globally in women responsible for 12% of all newer cancer cases. It was anticipated to be more than 3 million by 2040 (1). The essential reason incorporates stagnation of the estrogen levels which may be due to terrible natural conditions, undesirable lifestyle and particularly after menopause (2). Moreover, other variables such as frequent use of liquor, cigarette smoking, contraceptives, trigger the improvement of BC (1). Being metastatic the cancer spreads to various body parts, such as liver, lungs, bone, and brain (3). It is heterogenous in origin which may be due to hereditary, epigenetic, and transcriptomic changes at the biological and histological levels (4). This phenotypic contrast impacts breast cancer prognosis, and treatment. Initially, the course of BC treatment was determined by the tumor's biomarker profile, clinical stage, and histolidely, nodings (5). The

ENIKEPADU

medications used to treat BC prevent cancer from growing by obstructing particular chemicals that are necessary for tumour cells to proliferate and survive.

However, it is classified into five subtypes based on biological and molecular characteristics such as atomic profiling, growth factor expressions, and hormone profiling (5). Luminal A and B, triplenegative or basal-like (BL), human epidermal growth factor receptor 2 (HER2), and usual normal like BC are among them. The expression of progesterone (PR), oestrogen receptor (ER), luminal, and hormone receptor genes is a characteristic of the luminal A subtype. The expression of more luminal genes, followed by both ER/PR genes, is indicative of the luminal B subtype. The HER2 subgroup is distinguished by strong HER2 expression and low expression of ER and associated genes. Triple negative or BL patients have low expression of HER2 over time and strong expression of basal cytokeratins and epithelial cells (5). Compared to the luminal B subtype, the luminal A subtype has a more favourable prognosis and a greater survival rate. However, it has been shown that the HER2 subtype, which is defined by positive for HER2, is associated with strong histological features and a lower survival rate. This outcome may change dramatically if chemotherapy is combined with tyrosine kinase inhibitor and anti-HER? monoclonal antibodies. ER, PR, and HER2 are therefore well-built breast cancer biomarkers that aid PARTNCIPAL

Medicinal plants form the basic resource for the search of novel medicinal agents since ages. The search for new medicaments continues in preservance of human health due to various disease conditions. The plant *Urena sinuata* has been used in the treatment of diabetes in alternative systems of medicine. Diabetes is a chronic metabolic disorder of carbohydrates leading to many serious consequences. The remedial treatment suffers from lot of draw backs. In view of this, the present study underwent to investigate the anti-diabetic potential of root and stem extracts of the selected plant by *in vitro* methods - inhibition of alpha amylase and antiglycation. The hydroalcoholic extracts of the plant served appreciable role against diabetes forming evidence to its use in traditional systems of medicine. The results indicated that root hydroalcoholic extract showed equivalent activity in comparison to standard drug, acarbose in inhibiting alpha amylase at 500 µg/ml. Moreover, the root hydroalcoholic extract showed more antiglycation activity as compared to standard drug, rutin at 500 µg/ml.

Key words: Alpha amylase, Antiglycation, Urena sinuata root extracts, Anti-diabetic potential.

#### INTRODUCTION

Plants preparations are used in traditional medicine for the treatment of various diseases, such as type-2 diabetes mellitus. Some medicinal plants are capable of controlling the complications of this metabolic disease at different levels, for example, providing antioxidant compounds that act against oxidative stress and protein glycation and others which are capable of inhibiting the catalysis of digestive enzymes and thus contribute to the reduction of hyperglycemia and hyperlanguage type-2 diabetes mellitus

ENIKEPADU

(T2DM) is a metabolic disease that affects about 422 million people in the world, being characterized by several factors, including hyperglycemia and hyperlipidemia, as well as increased oxidative stress and protein glycation [1]. Imbalance in cellular metabolism of carbohydrates and lipids is observed in noninsulin dependent diabetes mellitus. Such a condition predisposes to increase in postprandial blood glucose levels [2-3]. Enzyme pancreatic α-amylase is the main enzyme, which plays a key tole in starch hydrolysis and

#### ABSTRACT

Orphan diseases are all medical conditions that impact 0.65 to 1 out of every 1000 people, according to the World Health Organization. Since these are not financially stable and feasible, they are typically not explored for their pathophysiology or the emerging therapy alternatives. On January 28, 1983, in the USA a law known as the Orphan Drug Act was formed to promote the study, creation, and approval of medications for rare diseases. There are currently as many medications for other infectious diseases as there are for tropical infectious diseases, with 11 pharmaceuticals (4.87%) recognized as orphan drugs. Several medications having orphan status are used to treat illnesses that no longer meet the requirements for orphan designation. Some businesses nisn manufacture and produce orphan medications. Nuclear cloning, rational drug design, and high throughput screening are all methods used in drug discovery programs that could lead to the development of new medicines. This article discusses orphan drugs, medical orphans, rare diseases, the orphan drug act, orphan drug design, the global market scenario of orphan drugs and various databases that contain information about orphan drugs. Patients who have been ignored by for-profit medication discovery efforts have hope for the future.

Keywords- Orphan Drug Act. Orphan drug design, Orphan drugs, Rare diseases, Various databases of orphan drugs

#### INTRODUCTION

VIJAYAWAD

form of medication known as an

orphan drug is only utilized to treat rare diseases. A pharmaceutical used to treat, prevent, or diagnose an orphan disease is referred to as an "orphan drug" in the definition. Orphan diseases are rare illnesses that affect fewer than 200,000 Americans. Orphan medications only affect a small portion of the population; hence the government cannot afford to produce them. The disorders that orphan drugs are used to treat are known as orphan diseases. To declare a condition an orphan disease and grant it orphan status for medicines developed to treat it is a matter of public policy that is dependent on the law. The word "orphan" originates from the Greek word "orphons," which can be used to describe either a child who has lost one or both parents or an adult who has lost a child. The word "orbus" is derived from the purponed Indo-European root "ORBH," which signifies "destitute," in Latin. The obsolete English words orbity and orbation were used to signify orphanhood or childlessness. Consider the terms for labour in certain modern European languages, such as the German Arbeit and the Czech robota. One who loses freedom is a slave who must perform difficult labour. In his 1920 drama R.U.R. (Rossum's Universal Robots), Karle Capek coined the term "robot" (female robotka) to refer to an imagined race of mechanical men and women. The etymology also reminds me of the relationship between orphans and workhouses.

#### MEDICAL ORPHANS

A patient without a personal relationship with their primary care physician is referred to as a "medical orphan" in the context of a Patient-Centered Medical Home (P.C.M.). Hepatitis G is an example of an orphan virus, which is a virus

#### Abstract

Pharmaceutical technologists, pharmacologists, and medicinal chemists all contribute significantly to science during the drug-development process. The drug approval process involves several steps, including discovery, pre-clinical testing, clinical testing, investigative new drug application filing, and new drug application filing. Before authorized drugs are put on the market in the USA, the US FDA is the regulatory body that assesses their efficacy and safety. Drug reviewers work for regulatory bodies all over the world, and it is their job to determine whether the study results support a new drug product's quality control, safety, and efficacy in serving public health. This article describes how innovative pharmaceuticals are discovered, marketed, and launched into the market while taking safety concerns FDA reviews new medications and devices promptly and does a respectable job of attempting to safeguard the public. However, scientific considerations are only one part of the regulatory equation due to incentives for speed, conflicts of interest in decision-making, restricted legislative mandates, low funds, and limited surveillance once products access the market. These restrictions may result in patients being unnecessarily exposed to medicines whose hazards outweigh their benefits, deceptive advertising of new medications, and the promotion of less effective over more successful treatments.

Keywords- Clinical trials, Efficacy, New drug approval process, Pre-clinical trials, Quality, Safety

#### INTRODUCTION

Different branches of the US Food and Drug Administration (FDA) are in charge of regulating pharmaceuticals and medical devices in the country. Ensuring the safety of foods, cosmetics, medications, and medical devices falls within the purview of the Food and Drug Administration (FDA). At the moment, different nations must adhere to various regulatory standards for new drugs to be approved. It is nearly impossible to find a single regulatory framework for marketing authorization applications (MAAs) that is relevant to several nations. Consequently, it is essential to understand the legal requirements for MAA in each nation [1]. There are no steps (phases) to the new drug papered process the first is for

clinical studies, and the second is for marketing authorization. To guarantee safety and efficacy, non-clinical investigations are conducted on the medicine. The application for conducting clinical trials must be submitted to the FDA, the USA's competent authority, as the next step. The following stage involves four phases of clinical trials, which are known as Phase I through Phase 4 studies. The purpose of this research is to optimize medicine dosage in humans while also ensuring safety and efficacy. Subsequently, the responsible authorities handle the drug's marketing application. After reviewing the application, the appropriate authority only approves the drug for marketing if it is determined to be both safe and effective, with the desired impact outweighing any negative effects. New medication regulations in the

Abstract

The Terminalia genus is the second largest in the Combretaceae family. All around the world, species belonging to the genus Terminalia have been utilised in antiquated forms of popular medicine. A brief report on Terminalia paniculata L. (TP) was later made, nevertheless. Comprehensive information regarding Terminalia plants, with an emphasis on TP and its biological and separated components, is presented in this literature review. Tannins, flavonoids, phenolic acids, triterpenes, triterpenoid glycosides, lignan, and lignan derivatives are only a few of the phytochemicals that have been isolated from Terminalia plants through plant-based research. A wide range of actions were documented by extracts and isolated components of several Terminalia plants. Part of TP are polyphenols such flavellagic acid, ellagic acid, and 3,3'-di-O-methyyl ellagic acid. Researchers have uncovered a wide variety of active chemicals in the Terminalia genus. The use of Terminalia in the treatment of many diseases in plant-lasted acids has been validated by numerous biochemical potentials. The

#### ABSTRACT

Carotenoids are thought to offer advantages in age-related illnesses, including protection against some types of cancer (especially lung cancer), strokes, macular degeneration, and cataracts. There are 600 identified carotenoids as of now, and 50 of them are consumed in humans to produce the vital nutrient vitamin A. They are obtained from various sources like plants, animals, and microbes such as algae, fungi, and bacteria. They constitute various colored pigments especially in plants and offer different roles in plant body as well as health benefits in Plasma lipoproteins transport carotenoids, which are metabolised by an oxidative rupture to retinal, retinoic acid, and trace amounts of breakdown metabolites. While xanthophyll's have an unchanging distribution between low-density lipoproteins and high-density lipoproteins, carotenes have strong association with low-density lipoproteins. The current review offers insight into the occurrence, chemistry, biosynthesis, metabolism, and role of different carotenoids in human health in combating various disease conditions.

Keywords- Biosynthesis, Carotenoids, Disease, Drug discovery, Health benefits

occurring compounds formed from isoprenoids. Due to the lack of the biosynthetic pathways necessary to produce carotenoids in animals, except for arthropods, most creatures are unable to synthesise them. Carotenoids are crucial pigments for photosynthesis, cellular repairs, and protection that are produced in the plastids of a plant's photosynthetic system [1].

#### Sources

There are more than 700 structurally different molecules in the class of natural chemicals known as carotenoids, which are found in large quantities in the environment (Fig. 1) [2]. The polyunsaturated isoprenoids that are found in plants are called carotenoids

ABSTRACT: The research review is conducted to assess the clinical pharmacist interventions/patient counseling impact on cancer patients quality of life (QoL). Most of the anticancer drugs have low therapeutic index and significant levels of toxicity which may lead to drug related issues, in such situations the effectiveness of the treatment may be significantly impacted by a clinical pharmacist intervention. A clinical pharmacist intervention includes patient counseling, medication adherence, drug interactions and management of adverse events. The pharmacist intervention has a positive role in increasing chemotherapy related knowledge, improving patient positive emotions dealing with adverse reactions caused by chemotherapy and improving the patients QoL. Hence, the impact of clinical pharmacist interventions especially, patient counselling role and outcome in cancer patients QoL were assessed.

Abstract: Now-a-days cancer is the most prevalent life-threatening disease which is spreading because of the lifestyle we are living. Cancer is due to uncontrolled growth of cell which can be cured if diagnosed in early stage of life. Cancer is a multifactorial, heterogeneous and chronic disease. Basically, cancer itself is a group of diseases, because of its frequency, reciprocal influences-even minor influence may lead to a major impact. Epidemiological studies clearly indicate that risk for several types of cancer (including pancreas cancer, liver cancer, breast cancer, urinary tract (colorectal) cancer is too high for mortality and morbidity. Obesity, hyperglycemia and increased oxidative stress may also contribute to increased cancer risk. Treatment of cancer depends on the various internal and external factors causing cancer. Cancer is screened by different screening test and a number of treatments are now available these days such as gene therapy, chemotherapy, surgery, radiation therapy, immunotherapy etc. In future up to 2030 around 22.2 million cases are expected to be diagnosed for cancer. Despite many decades of basic research and clinical research and trials of promising new therapies, new drugs, new treatments, cancer is the main cause of morbidity and mortality. In conclusion cancer is a complex disease which is gaining more of its popularity in humans and so, it needs more clinical attention and better designed treatments, studies and drugs.

Key Words: Cancer

eukemias, Palliative care, Prevention.

Abstract: Knowledge of chemical carcinogenesis has come largely from animal experimentation and occupational studies. The extent to which drugs are known to induce cancer in man is much more limited. Cancer develops over several years and has many causes. Several factors contribute to the development of cancer. Over the last 30 years scientists have worked hard to identify substances in the home, workplace, general environment, drugs that cause cancer. This is a challenging task because there are more than 100,000 chemicals molecules were commonly used by various purpose in household cleaners, solvents, pesticides, food additives, lawn care and as drugs. Every year, another 1,000 or so are introduced. Furthermore, these are single substances and do not consider the mixtures and various combinations of drugs as commercial and consumer products that are exposed to every day. In addition, many drugs may be changed to different substances by the atmosphere, water, plants and by incineration or combustion. Adding to the complexity, scientists know that cancer-causing substances are sometimes created during the synthesis or combustion of other drugs. So many natural substances and synthetic preparations are example of this kind of unwanted contaminant effects on human health.

Keywords: Carcinogens, Leutemorenic, Polycythemia vera, Diphenylhydantoin, occupational exposures.

Abstract: Cytotoxic chemotherapy suppresses the hematopoietic system, impairing host protective mechanisms and limiting the doses of chemotherapy that can be tolerated. Neutropenia, the most serious hematologic toxicity, is associated with the risk of life-threatening infections as well as chemotherapy dose reductions and delays that may compromise treatment outcomes. Chemotherapy induced late onset neutropenia, despite its importance as the primary dose-limiting toxicity, much concerning neutropenia and its consequences and impact remains unknown. Recent surveys indicate that neutropenia remains a prevalent problem associated with substantial morbidity, mortality and costs. Rituximab can cause late-onset neutropenia that may result in serious lifehreatening complications. Much research has sought to identify risk factors that may predispose patients to neutropenic complications, including febrile neutropenia, in an effort to predict better which patients are at risk and to use preventive strategies, such as prophylactic colony-stimulating factors, more cost-effectively. Neutropenic complications associated with myelosuppressive chemotherapy are a significant cause of morbidity and mortality, possibly compromised treatment outcomes and excess healthcare costs. Research in quantifying the risk of neutropenic complications may make it possible in the near future to target patients at greater risk with appropriate preventive strategies, thereby maximizing the benefits and minimizing the costs.

Keywords: Chemotherapy Induced Neutropenia (CIN), Risk Factors. Rituximab induced late-onset neutropenia, Colony-Stimulating Factors.

#### Abstract

In recent years studies on drug utilization (DU) have become a potential tool to be used in the evaluation of health systems. Studies on the process of DU focus on factors related to prescribing, dispensing, administering and taking of medication and its associated events. DU data is available from databases—computerized or otherwise. From these databases different types of information, qualitative or quantitative or referring to a particular population are available. Patient files and computer registries are widely used as instruments for collecting information on DU. Prospective, Concurrent or Retrospective Drug utilization evaluation (DUE) may be used depending upon the timing of data collection. Importance of DUE in Pharmacoepidemiology (PE) have been increasing due to their close association to other areas like - public health, Pharmacovigilance (Pv), Pharmacoeconomics and pharmacogenetics. This review article highlights various aspects, scope, types and future perspectives of DUE.

Keywords - Drug utilization (DU), Pharmacoepidemiology (PE), Pharmacoeconomics, Data collection, Drug utilization evaluation (DUE) cycle.

#### Abstract:

Some of the most common neurological disorders are epilepsy, Alzheimer and other dementias, strokes, migraine and other headaches, multiple selerosis, Parkinsons disease, neurological infections, brain tumors, traumatic conditions of the nervous system such as head injuries and disorders caused by malnutrition. Those may include, but are not limited to, mental health assessment, therapy, skills building, parenting assistance or family therapy. Medication should be only one part of a comprehensive treatment plan. Therapies for neurological disorders may often consist of; lifestyle changes to either prevent or minimize the impact of such conditions.

ABSTRACT: Chronic Kidney Disease (CKD) is a progressive condition affecting the kidneys, resulting in a decline in their functionality over time. It affects millions of individuals worldwide. CKD affects renal drug elimination and other pharmacokinetic processes involved in drug disposition (Eg; absorption, drug distribution, nonrenal clearance [metabolism]). Drug dosing errors are common in patients with renal impairment and can cause adverse effects and poor outcomes. Dosages of drugs cleared renally should be adjusted according to creatinine clearance or glomerular filtration rate (GFR) and should be calculated using online or electronic calculators. Recommended methods for maintenance dosing adjustments are dose reductions, lengthening the dosing interval or both. Physicians should be familiar with commonly used medications that require dosage adjustments. Resources are available to assist in dosing decisions for patients with CKD.

#### ABSTRACT:

Chronic Kidney Disease (CKD) is a condition in which deterioration of kidney function occurs gradually over time. Hypertension (HTN) and Diabetes type II (DM II) were the major causes of CKD in most of the cases. Medication Therapy Problems (MTPs) were constantly observed in patients affected by CKD. Therefore, additional care should be provided to these patients. As part of this special care management, the profound activities of the clinical pharmacist were considerable. Clinical pharmacists play a pivotal role in correcting these medication therapy issues and inappropriate prescription patterns. The main objective of the study was to provide information related to the effectiveness of clinical pharmacist activities in the management of MTPs in CKD patients. The acceptance rate of these pharmacist-based interventions by physicians ranged from 79 to about 95%. Most of the literature reviewed demonstrates the positive impact associated with clinical pharmacist activities. Further increased research should be performed to increase the quantitative assessment of clinical pharmacist services.

Key words: Chronic Kidney Disease (CKD), Clinical Pharmacist Interventions, Medication Therapy Problems (MTPs), Medication Adherence, Disease Management.

ABSTRACT: The Medication Therapy Problem (MTP) Categories Framework is a consensus-based document developed by the Pharmacy Quality Alliance's (PQA's) Measure Development Team (MDT) 9, to provide a framework for development of measures involving MTPs. The framework is intended to standardize how MTPs identified during Medication Therapy Management (MTM) encounters are categorized within measures. The MDT incorporated input from numerous MTM providers and practices and referred to MTP categories established in the literature. This standard framework for use within measures will promote consistent categorization and coding of MTPs and the related actions/recommendations to resolve the MTPs. Medication Therapy Management (MTM) can be assessed in multiple ways. Currently, 2 - MTM measures are endorsed by PQA. The Completion Rate for Comprehensive Medication Review measure assesses the extent to which MTM-cligible patients receive a comprehensive medication review during their MTM-eligibility period. The Medication Therapy Problem Resolution (MTPR) monitoring measure is based on the PQA Medication Therapy Problem Categories Framework and evaluates the percentage of interventions that resolve medication therapy problems among individuals participating in an MTM program. PQA also has 2 - quality improvement indicators that focus on MTM i.e. Completion Rate for Comprehensive Medication Review (CMR) and Medication Therapy Problem

#### **Abstract**

Introduction: Aripiprazole is an atypical antipsychotic with a pharmacological profile, different from other atypical antipsychotics. It is a high-affinity partial agonist at the dopamine D<sub>2</sub> and serotonin 5-HT<sub>1</sub>A receptors and an antagonist at serotonin 5-HT<sub>2</sub> receptors. It is associated with a good safety and tolerability profile including extrapyramidal side-effects.

Case-report: A 38-year-old female patient with paranoid schizophrenia who developed Parkinsonian symptoms after one month of Aripiprazole 10 mg/day. She had been admitted to our unit for a psychotic episode with delusions of persecution and grandiosity. It was her 2<sup>nd</sup> hospitalization. During the 1<sup>st</sup> hospitalization, 5 - years earlier, she had been treated with Haloperidol. We do not have any information about the tolerability of that treatment. At the start, she received Olanzapine with good tolerability but without efficacy on psychotic symptoms. After 4 weeks, we switched from Olanzapine to Risperidone 6 mg/day. After a few years, the patient developed severe Parkinsonian symptoms. We reduced the dose to 4 mg/day without any effect on the extrapyramidal symptoms. We decided to discontinue Risperidone and to introduce Aripiprazole 10 mg/day. After one month, the patient developed severe Parkinsonian symptoms including hypertonia, akinesia and shuffling gait. After reduction of the dose of Aripiprazole to 5 mg/day, all the Parkinsonian symptoms had disappeared within 5 days without any other medication.

Discussion: Few reports of Parkinsonian symptoms with Aripiprazole have been published in the adult population. There is one report of Parkinsonian symptoms, associated with hypersolication without akathisia, in a particular control of Aripiprazole. All the symptoms disappeared alterna switch a llanzapine.

#### Abstract:

Depressive disorders (DD) and alcohol use disorders (AUD) frequently co-occur, posing significant challenges in diagnosis and treatment. This review investigates the prevalence of depression among individuals with AUD acceptable developers the dynamic relationship between depressive disorders and alcoholism. Recent statistics reveal a surprising prevalence of depressive symptoms among individuals with AUD, surpassing anticipated rates. Notably, a statistically significant association exists between depression and alcohol consumption, indicating a complex relation between the two conditions. To effectively manage alcohol dependence, clinicians must comprehend the intricate connection between depression and alcoholism. Diagnostic tools such as the MINI-PLUS, Hamilton Depression Rating Scale (HAM-D), Severity of Alcohol Dependence Questionnaire (SADQ), and the Diagnostic and Statistical Manual of Mental Disorders (DSM) criteria play pivotal roles in accurate diagnosis and assessment. Through comprehensive evaluation, this review aims to shed light on the co-occurrence and progression of depressive disorders and alcohol use disorders. By synthesizing existing literature and statistical data, it provides insights into the relationship between these prevalent mental health conditions. This review serves as a valuable resource for clinicians, researchers, and policymakers seeking to enhance diagnostic practices and develop targeted interventions for individuals grappling with the dual burden of depression and alcoholism.

#### **ABSTRACT**

Patients with Febrile Neutropenia are more vulnerable to lifethreatening infections and possibly death, especially if their severe neutropenia lasts longer than 10 to 14 days. Febrile Neutropenia [FN] is characterized by a fever above 38.5°C and an absolute neutrophil count of less than 500 cells per cubic millimetre. Neutropenia lasting six to eight days is a common side effect of most standard-dose chemotherapy regimens. Endogenous cytokines, such as interleukin-6 and tumour necrosis factor, are triggered when chemotherapy-induced leukopenia occurs. This can lead to fever even when there is no infection. The possibility of infection, however, is the main worry in a patient with febrile neutropenia. In 25 to 40 percent of patients who have never had chemotherapy, conventional chemotherapy regimens can cause febrile neutropenia (FN). To prevent potentially fatal FN, colony-stimulating factors (CSFs) like granulocyte colony-stimulating factor (G-CSF) and granulocyte-macrophage colony-stimulating factor (GM-CSF) are now essential. Only G-CSF is appropred by the US Eood

#### ABSTRACT-

Substance use disorders, particularly alcohol and opioid abuse, are common health problems with significant personal and social impacts. Relapse is a common issue in substance use disorders, with studies showing that 65-70% of abstinent individuals relapse within a year, particularly within the first three months of abstinence. According to the World Health Organization (WHO), alcohol causes 3 million deaths annually, accounting for 5.3% of all deaths worldwide. Research shows that most abstinent individuals relapse within a year. Due to the significant effects of biopsychosocial factors on individuals, alcohol dependence and opioid dependence rank as most addictive drugs and pose serious health risks to the general public. Many factors, including psychological, genetic, environmental, neuro-biological, peer pressure, and socioeconomic factors, might contribute to alcohol and opioid dependence. Understanding these factors is crucial for finding effective strategies to prevent and treat alcohol and opioid dependence. This study reviews various psychosocial factors associated with relapse in alcohol dependence and opioid dependence patients and also explains the similarities and differences between the factors involved.

IndexTerms: Alcohol Dependence, Opioid Dependence, World Health Organization (WHO), Alcohol Use Disorders (AUS), National Survey on Drug Use and Health (NSDUH).

#### INTRODUCTION-

#### ABSTRACT:

One of the most challenging aspects in HIV care is dealing with immune reconstitution inflammatory syndrome. In this case, there are paradoxical worsening of inflammatory symptoms or the presentation of previously subclinical infections as the immune system recovers following ART initiation. Healthcare providers need to be familiar with IRIS to successfully handle its complexities. Identifying risk factors, diagnostic criteria and individualized therapeutic approaches—to mitigate its prevalence among HIV patients—is crucial. Indeed, key research findings have revealed much about IRIS epidemiology, pathogenesis and clinical manifestations. Moreover, low CD4 cell count, high viral load and previous opportunistic infections have been shown to predispose an individual towards it. Additionally, observational and prospective studies have shed light on diversity about incidence rates of IRIS; predictors for it; and outcomes associated with it. In summary, immune reconstitution i.e., a fully functioning immune system in an AIDS patient represents a major dynamic challenge that undermines medical care-givers efforts in HIV management. Articulating the significance of appreciating this condition will enable health professionals develop better treatment strategies which minimize adverse effects and improve overall patient outcome among ART recipients. Ongoing research is vital in order to elucidate further mechanism.

Keywords: IRIS (inputate accomplishment inflammatory syndrome) (HIVIII in include ficiency virus. Antiretroviral therapy (AIVE)

#### **ABSTRACT**

People who suffer from schizophrenia spectrum disorders (SSD) are more likely to experience stressful life events, which can worsen their long-term functioning by making them more sensitive to stress and causing a dysregulated stress response. Social disengagement and high levels of psychosocial stress are common in people with schizophrenia. Therefore, in the early stages of SSD, stress reactivity is a promising target for treatment. Targeting a dysregulated stress response in SSD patients, Integrated-Coping Awareness Therapy (1-CAT) is a manualized intervention that combines mindfulness and positive psychology. In patients with schizophrenia spectrum disorders, early interventions aimed at managing cardiometabolic comorbidity should take into account therapeutic strategies that target early-life stress. Impaired adaptive functioning, such as trouble juggling the demands of independent living, job, education, and interpersonal relationships, is linked to schizophrenia (SZ). Previous research has connected a physiological stress response to ineffective everyday coping. In this study, patients with first-episode SZ were evaluated using two validated measures of their stress response. As a measure of the hypothalamic-pituitary-adrenal response, salivary cortisol was evaluated. Parasympathetic flexibility was evaluated using vagal suppression (VS), a measure of stress-related reduction in heart rate variability. In addition to association with social cognition and neurocognition, two wellestablished predictors of functional ability, higher cortisol response and VS to social-evaluative stress were predicted to be associated with better functioning in Schizophrenia. In people with schizophrenia, metabolic abnormalities and obesity are substantial cardiovascular risk factors that lead to a greater death rate and a shorter life expectation compared to the general population. While there may be genetic or pathobiological containing the metabolic disorders and schizophrenia, an interventice, pecially those of the second gangation, on with tellenhance the risk of weight gain and metabolic

#### ABSTRACT

chizophrenic patients often use alcohol and other drugs, contributing to their disorder's morbidity. In individuals with schizophrenia, the lifetime prevalence of substance use disorders (SUDs) is close to 50%. With a large proportion of poly-substance users, the most commonly used substances are cannabis, alcohol, and nicotine. The emotional and financial toll that schizophrenia has on individuals, families, and the mental health system as a whole is significantly increased by these comorbid diseases. Standard antipsychotic drugs do not timit substance use, but atypical antipsychotics like clozapine may decrease it. Clozapine's beneficial effect in patients with comorbid schizophrenia and substance use disorders may be due to its ability to ameliorate deficits in dopaminergic neuronal projections. The aim of the current article is to review clozapine's effectiveness in treating SUD in schizophrenia patients. Different studies were taken into account and reviewed. There is more evidence of clozapine's impact on SUD, particularly when comparing it to first-generation antipsychotics in polydrug users.

Key words: schrzeopydoja, substante use disorder (SUD), atypical antipty fig.

#### ABSTRACT:

The criticism of using "obstetrical complications" (OCs) as a catch-all term highlights challenges in characterizing diverse physiological mechanisms affecting foetal/neonatal brain development. The proposal to replace broad OC scales with more specific measures reveals a potential for clearer assessment of neurodevelopmental risk factors for schizophrenia. The identification of hypoxic-ischemic compromise as a specific pathway as a specific pathway isordered growth suggests an elevated risk of schizophrenia, especially in the presence of the last factors, we owledging the role of genetic factors in abnorant train a librarent adds a

#### ABSTRACT

Breast cancer is a type of cancer that starts in the cells of the breast. It is more common in women but can affect men. Risk factors include age, gender, family history, and genetic mutations. Common symptoms include breast lumps, changes in size or shape, and skin or nipple abnormalities. Diagnosis involves imaging tests and biopsies. Treatment options include surgery, radiation, chemotherapy, hormone therapy, and targeted therapy. Early detection through screenings and awareness is crucial for better out comes. Community pharmacists are pivotal in breast cancer awareness, education, and support, contributing to public health initiatives. They provide information on breast health, promote awareness campaigns, and encourage screenings. Pharmacists offer guidance on breast self-exams, counsel on cancer medications, and manage side effects. Their accessibility and community presence enhance early detection and comprehensive care for breast cancer patients.

# STUDENTS PUBLISHED ARTICLES IN COLLEGE MAGAZINE, NEWSLETTER

#### IJAYA INSTITUTE OF PHARMACEUTICAL SCIENCES FOR WOMEN

Approved by A.I.C.T.E., PCI, Affiliated to JNTUK & An ISO 9001:2015Certified Institution A Quarterly Newsletter

#### A Newsletter on Pharmacy Practice

Dear readers.

Students as they reflect on their own learning and pursue innovative ways, success comes to them. So, they are to be given enough space, time and freedom to generate new knowledge and engage themselves with the information passed on to them by their teachers. At the same time, creative learning can only happen as they indulge themselves not only in text book learning, but also initiate themselves to perceive and make use of other resources and sites of learning. At Vijaya Institute of Pharmaceutical Sciences for Women, students find such a learning space as they become participants in learning and not looked upon as mere receivers of a fixed body of knowledge. It is observed in their active involvement in various activities inside and outside the college. This is a continuous process which makes the student link the concepts and processes what she has studied earlier

#### INCREASED VITAMIN D INTAKE CAN DE-CREASE SYMPTOMS OF DEPRESSION

Vitamin D is a micronutrient identified as a hormone because of its active metabolite calcitriol- exerts endocrine, paracrine, and autocrine effects. Vitamin D is a neuroactive steroid that express neurotransmitters, regulates neuroimmuno modulation, produces antioxidants, and activates several kinds of neurotrophic factors. Additionally, it can up regulate genes related to the synthesis of tyrosine hydroxylase; an enzyme that is involved in the formation of catecholamine's and may be important in the onset and management of depression. The traditional role of vitamin D is to maintain serum levels of calcium and phosphorus within a healthy physi-

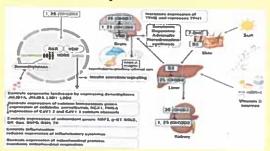

#### Vitamin D Metabolism

### Vitamin D Is a Bioactive Agent in the

vitamin D has direct neuroprotective actions and can reduce some biomarkers of brain aging, i.e., optimal levels of vitamin D stabilize myelin structure and enhance synaptic vesicle recycling and transcription factors facilitating cognitive processes. Additionally, preclinical studies indicating vitamin D deficiency in early life affect neuronal differentiation, axonal connectivity, dopamine ontogeny, and brain structure and function. These bioactive mechanisms offer an intriguing possibility of the epidemiological associations between vitamin D deficiencies and psychiatric disorders such as depression.

#### Vitamin D Supplementation for the Treatment of Depression

Conclusion Vitamin D supplementation or higher serum vitamin D levels had a protective role against development and symptoms of depression. Vitamin D supplementation has beneficial effects in both individuals with MDD as well as in those with milder, clinically significant depressive symptoms. RCTs focused on clinical samples of individuals diagnosed with

#### A drug that combiats airway hyperresponsiveness through TXA2 antagonism

Scratrodast, a quinone derivative, is a potent, orally active and long –acting thromboxane A2 (TXA2) receptor antagonist that is approved for management of astma. It was marketed in japan and parts of china since its discovery in 2003. Most research on broncho-constriction has focused on mediators of inflammation that act locally at the bronchioles, mainly SRS-A (Slow reacting substance of anaphylaxis). Compounds that prevent the action of leukotrienes, like leukotriene antagonists have been used in therapy of astma. Researchers also synthesized substances (AA-861) that inhibits 5-lipoxygenase, but thety were quickly meatbolized in the body. A new compound (AA-2424), not easily metabolized and inhibiting both immediate and last asthmatic response as well as reduced airwayhyer-responsiveness in animal models was synthesized in 1999, mat was called Seratrodast.

Seratrodast demonstrated Thromboxane A2 (TXA2) receptor antagonism and was reported to be free from harmful after affects. TXA2 has multiple actions in pathophysiology of asthma that includes, constriction of bronchial smooth muscle cell proliferation, stimulating vagal sensory nerves to induce airway hyper-responsiveness, increased airway micro vascular leakage, increased mucous secretion and potentiated cholinergic neurotransmission. In an open -label cross over design study of 10 adult asthmatics, additional effects of oral seratrodast to inhaled corticosteroids was assessed. Clinical symptoms and mean PEF (Peak expiratory flow) significantly (p<0.p05) improved after seratrodast administration, as well as deterioration in PEF was observed after seratrodast withdrawl. It also improved airway hyper-responsiveness to acetyl choline and decreased concentrations of ECP (eosinophillic cationic protein) in the sputum.

The drug has been approved for use in prophylactic management in asthma, allergic rhinitis and chronic bronchitis in adults. Some literature suggest that it sis useful in allergic asthma. It is classified as a controller medications a per GINA guidelines. In India, it was approved in December 2012 as an add-on controller medication in asthma. Currently approved dose is 80mg once daily in the evening, a dose of up to 320mg/day is well tolerated. Elderly may require a lower dose (40mg) as the AUC and half-life were twice that of normal adults. Adverse reactions reported commonly were elevated liver enzymes, anaemia, abdominal pain & other GI disturbances and rash/itching. Cautious use is advised in patients with hepatic impairment and it is not recommended for treatment of acute asthma.

Though the drug is in existence since 20023, apart from a handful studies performed in few patients, no data regarding long term safety of the drug or comparative effectiveness data are available. Moreover, it is useful as an add-on therapy in asthma.

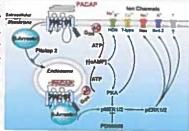

#### PAC -1- A PROMISING ANTI-CANCER AGENT

The scientists from University of Illinois recognised Procaspase Activating Compound - 1(PAC-1) as the anti-cancer agent that activates the pathway responsible for inhibition of cancer cell proliferation. Procaspase-3, a protein present in most cells, is converted

into active caspase-3, an enzyme that triggers apoptosis. Paul Hergenrother et. al., at the University of Iowa also discovered that procaspase-3 is more prevalent in cancer cells than in healthy tissues. This feature made it a suitable target for anti-cancer medicines, combined with its propensity to be activated in cancer cells Hergenrother and Dr. Timothy Fan, at the University of Illinois, discovered that

an early formulation of PAC-1 exhibited anticancer properties in dogs with spontaneously developing lymphomas, meningiomas, and osteosarcomas. The clinical studies for humans were started some years ago by a private

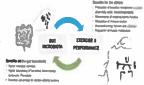

investor, which laid foundation for the initiative of Hergenrother. The researchers used PAC-1 together with the medication temozolomide in the most recent clinical study. In earlier study, the scientists found that PAC-1 passes the blood-brain barrier, which is crucial for any therapy of brain cancer. To advance the therapy into phase II clinical trials, much healthier individuals with very similar disease characteristics are utilized by the doctors. Additionally, encouraging outcomes were seen when PAC-1 was used with radiotherapy, temozolomide on pet dogs with brain tumours. It will be less expensive to test PAC-1 against additional malignancies, and it is clinically proved as effective therapeutic agent against multiple cancer types and the medicine will be approved for use in those population s. Results of a clinical trial conducted by Dr. Arkadiusz Dudek, at Regions Hospital in St. Paul, Minnesota, and at Mayo Clinic in Rochester, Minnesota, were found to be noteworthy in number of patients with advanced disease. Patients and doctors from three institutions are involved in the clinical study, including those from Regions Hospital, the University of Illinois at Chicago, and Johns Hopkins University .Further, phase I clinical studies are intended to determine whether a novel medicinal molecule has dangerous toxicities or side effects in human patients. However, researchers might also seek for early indications of treatment advantages. Cancer patients with advanced illness who had exhausted all other therapy options were enrolled in the experiment. Further, phase I clinical studies are intended to determine whether a novel medicinal molecule has dangerous toxicities or side effects in human patients. However, researchers might also seek for early indications of treatment advantages. Cancer patients with advanced illness who had exhausted all other therapy options were enrolled in the experiment

#### ROLE OF PROBIOTIC MICROFLORA IN GUT FOR GALVANIZING PHYSICAL ACTIVITES

Exercise has numerous positive effects on healthy physiology. However, the factors controlling a person's drive to exercise, nevertheless, are still not fully comprehended. The motivational pleasure experienced after engaging in sustained physical activity, produced by exercise-induced neurochemical changes in the brain, is a key component promoting both competitive and recreational exercise. According to a research, the creation of endocannabinoid metabolites by the microbiota in the gut increases the activity of sensory neurons that express Transient receptor potential vanilloid sub-

type I which raises dopamine levels in the ventral striatum during exercise .Microbiologist Christoph from University of Pennsylvania experimented in mice, which were designed to have a lot of genetic and behavioural variety, to better understand why some people enjoy exercise while others don't. His team discovered a disparity in the distance travelled by the mice while running on wheels in their cages where some travelled more than 30 kilometres in 48 hours, while others hardly moved. The genetics and biochemistry of the active and inactive mice didn't change much from one another. However, the researchers suggested that mice were typically quite energetic tended to exercise less when administered with antibiotics. Studies conducted in the wake of the initial ones revealed that the antibiotic therapy had an impact on the mice brain. The levels of dopamine, the neurotransmitter associated with the "runner's high" declined, along with the activity of specific genes in the brain. The team discovered the dopamine-enhancing signal travels through neurons in the spine to the brain after investigating mice that were genetically altered to lack specific nerve cells and chemically inhibiting the function of nerves that transmit messages from the gut to the brain. The scientists were able to deliver the pro-exercise instruction even to animals without gut microbes by stimulating those erves. These spinal neurons were removed from the body and exposed in the laboratory to different types of gut bacteria as well as microorganisms. Dopamine levels spiked in the animals' brain during exercise when they were administered with these chemicals, called fatty acid amides. A new gut bacterium with the genes that produce fatty acid amides was administered in microorganisms eradicated mice by antibiotics According to a research report, individuals who run marathon have higher numbers of specific gut bacteria, which may be related to exercise.

nik Heena nik ujefa eravalli Anjana Srisatya DRUGS CAUSING DRESS SYNDROME

DRESS syndrome can be triggered by various drugs, commonly including anticonvulsants like phenytoin, carbamazepine, and lamotrigine; antibiotics such as minocycline and certain sulphonamides; NSAIDs like Mefenamic acid and antiretroviral nevirapine. Allopurinol, used for gout, is also a frequent cause. These drugs may activate the immune system abnormally, leading to the syndrome.

#### FIRST SIGNS OF DRESS SYNDROME.

The first signs of DRESS syndrome often include a high fever and a rash that may initially look like small red spots, which can then spread and merge to cover more extensive areas of the body. Additional early signs can be swelling of the lymph nodes, particularly in the neck, and facial swelling. Because of its potential severity, any sudden onset of these symptoms following the initiation of a new medication should be promptly evaluat-

#### DRESS SYNDROME TREATMENT

The treatment of DRESS syndrome primarily focuses on the immediate cessation of the suspected causative drug. Corticosteroids are the most common drug of treatment for DRESS syndrome and are used to suppress the overactive immune response with drugs like Cyclosporine, etc. In addition to corticosteroids, other treatments may include antihistamines to alleviate itching and topical steroids for rash. Organ-specific treatment is necessary for individuals with significant organ involvement, such as hepatitis or pneumonitis. In cases of severe and refractory DRESS, other immunosuppressive agents like Cyclosporine or intravenous immunoglobulins (IVIG) may be considered.

#### **PREVENTION**

It is believed that people with DRESS syndrome may fully recover or some may experience a prolonged course. The only way to prevent a recurrence of DRESS syndrome is to refrain from taking the drug responsible for it. Maintain a record of medicines you are

#### A NEW CURE :-FDA Approves First Gene Therapies to Treat Patients with Sickle Cell Dis-

Recently the UK DRUG regulator approved a gene therapy for the cure of Sickle cell disease and thalassemia. This is the first licensed therapy in the world based on the gene editing technology Crispr-Cas9.

#### HOW DOES THE THERAPY WORK?

The therapy uses the patient's own blood stem cells, which are precisely edited using Crispr-Cas9. A gene called BC11A, which is crucial for switching from foetal to adult haemoglobin, is targeted by the therapy. Foetal haemoglobin, which is turally present in everyone at birth, does not carry the same abnormalities as adult haemoglobin. The therapy uses the body's own mechanisms to start producing more of this foetal haemoglobin, alleviating the symptoms of two conditions.

#### WHAT HAVE THE TRIALS SHOWN SO FAR?

For sickle cell disease, 45 people received Casgevy. Only 29 of these patients had been in the trial long enough for the interim analysis on which the approval is based. All but one of these 29 trial participants had no severe pain crises for at least 12 months after treatment.. The

therapy has been administered to 54 pesons with thalassaemia for the trial. Of them 42 were in trial long enough for the internal analysis. 39 of the 42 patients did not need a transfusion for at least 12 months after the treatment. The need for transfusion dropped by 70% in the other three.

#### HOW IS THE THERAPY PREPARED AND GIVEN?

Casgevy is a one-time treatment for which the doctor has to first collect blood stem cells from the bone marrow using a process called APHARESIS. The cells are then sent to the manufacturing site where it takes about 6 months for them to be edited and tested. Before a transplant with the edited cells, the doctor gives a conditioning medicine for a few days to clear the bone marrow of other cells that will be replaced by the modified cells. The patient has to stay in hospital for atleast a month so that editied cells take up residence in bone marrow cells and start making blood cells with normal haemoglobin.

#### **CHALLENGES OF THIS TREATMENT**

Cost is one of the biggest limitations of newer gene therapies, along with the absence of local manufacturing facilities, which

### "DISEASE X" AND THE CHALLENGE OF "UNKNOWN" UNKNOWNS

#### WHAT IS DISEASE?

Disease X is the name given by scientists and the World Health Organization to an unknown pathogen that could emerge in future and cause a serious international epidemic or pandemic. In February 2018, Disease X was included in the WHO's updated Blueprint list of diseases for which investing in research and development should be an international priority. It is also a priority for CEPI's research and development investments.

#### Where will the next Disease X come from?

Novel diseases emerge all the time in all parts of the world, often making the leap from animals such as bats into humans. Scien-

tists believe the next Disease X is highly likely to be caused by a new virus that will emerge from one of around 25 <u>families of viruses</u> that have already shown their capability to cause disease in people.

#### **Challenges and Opportunities**

Operationalizing and institutionalizing One Health, Laboratory Capacity, Identifying case clusters, Embedded surveillance systems building on existing programs, Data sharing — within and between countries.

#### Strategic Action Areas for Responding to Disease X

Regional and global cooperation/governance mechanisms, One Health Preparedness for Disease X events, Adaptive healthcare systems to respond to Disease X events, Measure risks and predict occurrence of Disease X events, Communication and countering misinformation, Equity, Evidence-based, Ethics, Collaboration, Community-centered, Invest in priority R&D Predict the impacts of Disease X

#### LASER TECHNOLOGY TO VAPOURIZE BLOCKAGES IINSIDE HEART VESSELS

Laser therapy is a minimally invasive surgical procedure to re-open blood vessels to allow smooth flow of oxygen-rich blood. The catheter is manoeuvred through the vessel until it reaches the blockage. High-power laser treatments direct thermal energy to vaporize water in the artery and create a vapor bubble, which expands and collapses to break the plaque. Similarly, the technology, pioneered by Xinmai Yang, doctoral advisor for the team, uses a low-power nanosecond pulsed laser to produce microbubbles.

Coronary laser angioplasty eliminates need for bypass surgery (CABG)  It treats blockages of artery caused by collection of fatty deposits (plaque)
 Doctor makes small inci-

sion in patient's groin and inserts wire with laser the lit's moved to the area where fatty deposits

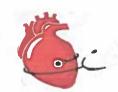

restrict the blood flow

Laser used to burn fatty
deposits on artery walls

➤ Plaque is vapourized, laser & wire are removed, & incision is closed

The addition of irradiation from ultrasound causes the microbubbles to expand, collapse, and disrupt the plaque. Laser energy is used to vaporize the blockage and using laser becomes easier for the doctors to deliver ballons and stents in case they are needed which also ensure perfect positioning of the stent. Sometimes the diameter of the vacced larger and the stent of the vacced larger and the vacced larger and

times the diameter of the vessel lumen reduces after angioplasty at times, stent thromosis occurs which could be fatal. So using laser can reduce these threats, It's benefical for patients in many ways as it causes less discomfort, gets over much faster, reduces hospital stays and recovery times and most of the patients return to active life with in short period of time.

#### **NOVEL DRUG APPROVALS FOR 2023**

DRUG NAME	ACTIVE INGREDI- ENT	APPROV- AL DATE	USES
Fabhalta	Iptacopan	5/12/2023	First oral treatment for paroxysmal nocturnal hemo- globinuria
Fruzaqla	Fruquintinib	11/8/2023	To treat refractory, metastatic colorectal cancer
Rivfloza	Nedosiran	9/29/2023	To lower urinary oxalate levels in patients 9 years and older with primary hyperoxaluria type 1 and relatively preserved kidney function
Zilbrysq	Zilucoplan	10/17/2023	To treat generalized myasthenia gravis in adults who are anti-acetylcholine receptor (AChR) antibody positive
Truqap	Capivasertib	11/16/2023	To treat breast cancer that meets certain disease cri- teria
Ojjarra	Momelotinib	9/15/2023	To treat intermediate or high-risk myelofibrosis in adults with anemia

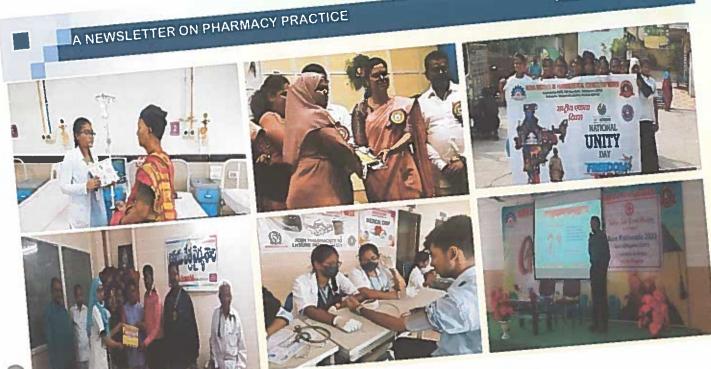

"The important thing is not to stop questioning. Curiosity has its own reason for evistance"

- In observance of World Mental Health Day on October 10th, the college arranged a counseling session facil-**Campus News** itated by V Pharm D students for patients at the Psychiatry Department of GGH, Vijayawada.
  - Pharm. D students organized a Diabetes Awareness Program on World Diabetes Day, November 14, 2023. As part of the initiative, they conducted complimentary diabetic screenings and provided counseling on the disease and its long-term complications, distributing patient information leaflets at Government General Hospital.
  - On October 13, 2023, V PharmD students organized awareness sessions at Government General Hospital, Vijayawada, highlighting the causes, effects, and self-screening methods for breast cancer as part of Breast Canser Awareness Month.
  - On December 1, 2023, commemorating World AIDS Day, PharmD students conducted an awareness session on AIDS and preventive measures at Kanuru Primary Health Centre.
  - On November 5th, 2023, fourth-year PharmD students took part in an eye camp organized by Dr. Kola Vijaya Sekhar, Professor of Ophthalmology at GGH, Guntur.
  - The 62nd National Pharmacy Week, with the theme "Join Pharmacists to Ensure Patient Safety," took place from November 9th to November 25th, 2023. In light of this, the college organized a medical camp involving PharmD students.
  - Ms. Sumaya Sultana, a PharmD student (2017-2023 batch) at Vijaya Institute of Pharmaceutical Sciences, was honored as the university topper and awarded a gold medal at JNTUK.

To,
