PHARMA 2018 EXPO

Certificate

This is to Certify that Mr. / Ms. T. Lalitha / Types of Analytical Methods
has actively participated as Delegate / Volunteer in the **PHARMA EXPO - 2018**
held on 3rd & 4th December, 2018 at Vijaya Institute of Pharmaceutical Sciences for
Women, Enikepadu, Vijayawada. His / Her Presence has been appreciated.

 Sri B. S. Sri Krishna Secretary, SRK Foundation	 Dr. G. Devala Rao President, A.P State Branch, APTI	 Dr. S. Vidyadhara Chairman, Edu. Div. IPA, Mumbai	 Prof. K. Padmalatha President, IPA ENIKEPADU LOCAL BRANCH

AN OVERVIEW ON A PERLICIOUS PEPTIC ULCER DISEASE AND THE ANTIULCEROGENIC MEDICINAL PLANTS

D. Santhi Krupa^{1*}, K. Padmalatha, T. Pooja Neelima¹, K. Sireesha¹, Sk. Sofiya Begum¹, V. Kusuma¹, M. Sushma Reddy¹

Department of Pharmacology, Vijaya Institute of Pharmaceutical Sciences for Women. Erikepadu, Vijayawada, Andhra Pradesh, India.

ABSTRACT

Though the concept of gastric secretion, food digestion, acid in gastric juice, hyperacidity and gastric ulcers are known from the 17th century, the treatment of peptic ulcer is still inappropriate. Some cases of gastric ulcer demand surgical approaches. With medical advances, anti-secretory antiulcer and mucoprotective drugs are introduced. In the 19th century, with the established *H. Pylori* mediated pathophysiology, it had demanded the inclusion of antibiotic therapy regimens. However, the relapses, recurrences, side effects and more pronounced drug interactions of the drugs had widened the opportunity to explore medicinal plants having antiulcer activity. This present review article will cover the etiology, pathology of peptic ulcer, allopathic antiulcer drugs, their disadvantages and a view of antiulcer medicinal plants.

key words: Allopathic, recurrences, side effects, treatment, medicinal plants, microbial.

INTRODUCTION

Peptic ulcer is an open sore that forms on an epithelial surface and leads to loss of tissue lining the lower esophagus, stomach, or duodenum. The incidence of peptic ulcer disease (PUD) and its complications varies across the world. Peptic ulcer disease can greatly impact morbidity and mortality across the globe [1]. The perforated peptic ulcer was firstly quoted in case of Princess Henrietta of England, 1620. In late 20th century, Bary Marshall and Robin Warren had identified *H. pylori* as the microbial cause for peptic ulcers. Though the disease was evident from ancient history, the treatment part still demands the new leads to overcome the relapses

or reoccurrence of existing drugs, as a gift of nature the combinational therapy including medicinal plants to the existing allopathic medicine can increase the safe and effectiveness of antiulcer treatment.

ETIOLOGY

The history of peptic ulceration sickness ranges from resolution while intervention to the event of complications like sore formation and perforation. Hyperacidity, underneath production of mucosal secretions, are the basis for the incidence of peptic ulcer disease [8]. Apart from the acidity and mucus

ABSTRACT

Stroke sometimes referred to as a brain injury caused by a sudden interruption in the blood supply of the brain. Stroke occurs when part of the brain does not receive the needed blood flow for one or two reasons either the blood supply to part of the brain is suddenly interrupted, or because a blood vessel in the brain ruptures and blood invades the surrounding areas these are the reasons for the occurrence of stroke. Central information-processing organ of the body is brain and it is responsible for the control of multiple complex functions. The brain cells start to die (cerebral infarction) leading to brain damage without the blood supply. Approximately two million brain cells die every minute during a stroke which increases the risk damage to brain,

disability and death. According to the type of stroke suffered, the part of the brain affected, and the size of the damaged area the level of disability from patient to patient varies. Various alternative approaches including the use of ESCs, MSCs, NSC, and iPSCs have been tried in hopes of improving the neuronal and functional impairment that usually follows a stroke insult. Stem cell therapy significantly increase neurological functions and quality of life, but more investigation is required to provide evidence to support clinical application of stem cell transplantation.

KEYWORDS: Ischemic stroke, types of stroke, stem cell treatment.

INTRODUCTION

Globally Stroke is the leading cause of disability and fourth leading cause of death. When a blood clot blocks an artery (a blood vessel that carries blood from the heart to the body) or interrupting blood flow to an area of the brain, blood vessel (a tube through which the blood

ABSTRACT

Researches are still focused on the concept of ion pair formation their properties and applications in the various fields which was introduced in the year 1926, by Bjerrum. A pair of oppositely charged ions held together by coulomb attractions without formation of a covalent bond. Experimentally an ion pair behaves as one unit in determining conductivity, kinetic behaviour, osmotic properties, etc. investigation methods used are various, from classical conductometric measurements up-to-date methods such as spectrophotometry, chromatography and capillary electrophoresis. In case of pharmaceutical field, these ion pair are mostly used to develop the

methods of separation identification and assay for the active substances in complex matrices, to obtain pharmaceutical formulations with controlled release and to explain the mechanism transport and action for certain drugs. This is an attempt to describe the new trends in spectrophotometry of ion pairs and their applications in the pharmaceutical field. The development of concept and types of ion-pairs are discussed first; further; examples of applications using molecular absorption, fluorimetry and resonance light scattering spectrophotometry are presented. Based on the literature data and the experience in the field, challenges and perspectives in the ion-pair spectrophotometry are also considered.

KEYWORDS: Ion-pair spectrophotometry, pharmaceuticals, UV-VIS absorption, fluorescence, resonance light scattering, resonance Rayleigh scattering.

INTRODUCTION

Ion-pair spectrophotometry refers to analysis methods based on the optical properties of the ion pairs. Infrared, Nuclear Magnetic Resonance and Raman spectrometry these are the

ABSTRACT

Banana is commonly a fruit but technically, a berry. The genus *Musa* of herbaceous plants produces this universally consumed fruit. It is suitable for consumption by people of any age group and so, is one of the world's most important food producers. Bananas offer great medical benefits. This is partly because bananas aid in the body's retention of calcium, nitrogen and phosphorus, all of which work to build healthy and regenerated tissues. It has a rare combination of energy value, tissue-building elements, protein, vitamins and minerals. It is a good source of calories since it is rich in solids and low in water content as compared to any other fresh fruit. Banana is one of the most important gigantic and oldest cultivated fruit crops grown almost everywhere in India. Presently, the banana pseudostem is hazardous waste in India while it has been used in several countries to develop important bio-products such as fibre to make yarn, fabric, apparel as well as fertilizer, fish feed, bio-chemicals, paper, handicrafts, pickles, candy, etc. Looking at this perspective, entrepreneurs of India should take this golden opportunity and do the needful for such kind of business. The land of our country is suitable for banana production. Its fruit is a healthy diet and demandable in local markets as well as the free waste could be utilized to produce such bio-products which will contribute directly in our national economy. Thus, farmers or entrepreneurs should cultivate more banana trees in unproductive lands of coastal and hilly areas for extra income from the useless wastes and ensure eco-friendly environment. Women can also be employed in production of different bio-products from banana wastes and thus, they can contribute to their livelihood improvement. In conclusion, this review on *Musa* possess various phytochemicals and it is having important pharmacological activity which can help in improving various health problems and waste utilization will be of help to the farmers, entrepreneurs, planners, scientists as well.

Keywords: *Musa*, Phytochemical, Uses, Pseudostem, bio-products, employment, eco-friendly, health care

ABSTRACT

Periodontitis is an inflammatory disease characterized by progressive destruction of periodontal soft and hard plaque tissues leading to permanent tooth loss. The incidence of these diseases can be reduced by mechanical plaque removal or scaling and root planning (SRP) along with systemic and locally delivered antimicrobial agents or statins. *In-situ* gels are the drug delivery systems that are in solution form before administration in the body, but once administered in to the body undergoes gelation *in-situ* to form gel. Mechanisms involved in *in-situ* gel formation are solvent exchange, UV-irradiation, ionic cross-linkage, pH change, and temperature modulation. Polymers exhibit sol-gel phase transition and thus trigger drug release in response to external stimuli. The polymers used must be biocompatible, adhere

properly to mucus, and exhibit pseudo plastic behavior. The main advantages of this route of drug administration is that it can deliver the active agents directly to the site of action at bactericidal concentration and it can facilitate prolong drug delivery.

KEYWORDS: *In situ* gel, Periodontitis, Thermo-sensitive modulation, pH change and Statins.

INTRODUCTION

Periodontitis (PD) is an immuno-inflammatory disease of tooth supporting tissues (the gingiva, bone and periodontal ligament), which results in progressive destruction of surrounding soft and hard tissues with eventual tooth mobility and exfoliation. PD starts as an

CONESTOGA COLLEGE INTERNATIONAL EDUCATION OFFICE

Date: October 26, 2020

Bindu Sri Boppudi
1-116, North Street, Pedapadu Mandal West Godavan
Punukollu, Andhra Pradesh
534437, India

Student Number: 8748731

Dear Bindu Sri Boppudi

Congratulations on your full-time acceptance to Conestoga College. Your letter of acceptance can be used to apply for your study permit at the [Canadian Embassy](#) or Canadian High Commission in your country. As it can often take several weeks to process your study permit, please apply as soon as possible.

Please also be sure to visit our [International Scholarship website](#) for scholarship opportunities.

B.Y.O.D. - Bring Your Own Device
Some programs require you to bring your own device. It is your responsibility to ensure that you bring the appropriate device for your program. Please visit the [Conestoga College website](#) to verify if your intended program requires you to bring your own device.

Students accepted to a program that includes a practicum within the School of Health and Life Sciences must complete mandatory health and safety requirements to be eligible for work-integrated learning experiences (WIL). These prerequisites are required by legislation and WIL agencies for all persons working in this sector. To locate information on your WIL Document Requirements, please visit our myConestoga webpage at [www.myconestoga.ca](#)

Login ID: WILdocumentsforms
Password: International2

Your WIL document requirements must be completed prior to attending any WIL experience. Please contact WIL Document Services at WILdocumentservices@conestogac.on.ca or 519-748-5220 ext. 3101 should you have any questions.

Information regarding **mandatory program and international students' orientations** will be sent to you approximately 8 weeks before your program start date. **These mandatory events will be held prior to the first day of classes.** Please plan your arrival date accordingly.

Note: International students who have been accepted to a program with a co-op placement, an internship or an unpaid field education component, even if the activity is paid or unpaid, on or off campus, or full-time or part-time are required to have a co-op work permit. This information is provided on your letter of acceptance. There is no cost to apply for this permit. The work permit required for co-op placements, internships or unpaid field education can only be used for activities assigned as part of your program of study. It is your responsibility to ensure you have the proper authorization.

For up-to-date information, and to apply on-line for a co-op work permit, please visit [Citizenship and Immigration Canada \(CIC\)](#). Should you have any questions regarding this process, please contact an International Student Advisor in the International Office at internationaloffice@conestogac.on.ca

We look forward to welcoming you to Canada and Conestoga College.

Best wishes,

Dear reader

Medicine is a "miracle elixir" which helps in maintenance and restoration of health by the prevention and treatment of illness. Cancer is a complex disease and the positive notion of finding a cure for it makes it always alive in the minds of researchers, clinicians, physicians, druggists and the fraternity involved in this activity. There have been articles about experiments on a particular drug or therapy or extracts from fruits would kill the malignant tumor cell, but still fail to find a place in

A PROSPECTIVE OBSERVATIONAL STUDY ON IMPROVEMENT OF MEDICATION ADHERENCE BY HIGH TOUCH MODEL IN HIV-1 PATIENTS IN TERTIARY CARE HOSPITAL

Medication adherence is defined by the World Health Organization as "The degree to which a person's behavior corresponds with the agreed recommendations from a health-care provider." Medication non-adherence in patients leads to substantial worsening of disease, death, and increased health care costs. Despite the availability of effective agents, it is a growing challenge, with rates as high as 50% in chronic disease. Poor medication adherence can lead to unnecessary disease progression and complications reduced functional abilities and quality of life, more medical costs and physician visits. Reasons are patient-related, prescriber-related, health system's team building-related, treatment and condition related factors.

Patient-centric models can develop effective health care. The aim of this study is to prevent the medication non-adherence and to improve patient care groups and exclusion criteria was patients other than HIV-1.

The total number of patients included in medication non adherence study are 89 includes both males and females of different age groups selected randomly out of which males were 45 and females were 44. Average adherence was calculated in both males and females of HIV-1 before and after the HTM. The results are calculated by two-tailed Student t-test. In males, the calculated t-value (3.125) is greater than table t-value (2.447). In females, the calculated t-value (4.911) is greater than table t-value (2.447). The results after conducting HIGH TOUCH MODEL there is a significant change

prescription practice. Preclinical studies at the National Cancer Institute, recommend a possible solution to *necroptosis*, a phenomenon of controlled cell death to make the human immune system free of cancer causing cells. Research on targeted cancer therapy brought into lime light the importance of colostrum and breast feeding in improving the natural immune system against cancer causing cells. Let the combined efforts result in the engineering of better approaches to create an immune response in various types of cancers.

of medication adherence in HIV patients. The average adherence among males of various age groups before conducting HTM was found to be 74.5%, which increased to 85.75% after conducting HTM. The average adherence among females of various age groups before conducting HTM was found to be 73%, which increased to 86.5% after conducting HTM. The study results has been observed that there is a great increase in adherence of HIV patients of about 11.25% in males and 13.5% in females. This study concludes that the forgetfulness and interruptions of daily routine were the most common reasons for non-adherence among the patients. The High touch model has helped to improve the medication adherence of the patients suffering with HIV. The pharmacist has to be responsible in improving the Medication Adherence in patients with various chronic diseases such as HIV, Diabetes, Hypertension, Cardiovascular diseases, Asthma and COPD.

HYPERTENSIVE DRUG HAS POTENTIAL TO SLOW DOWN ALZHEIMERS DISEASE

Alzheimer's disease is a progressive disorder which causes brain cells to degenerate and leads to death of cells. Alzheimer's disease is most common cause of dementia – a progressive decrease in thinking, behavioral and social skills which disrupts a person's ability to function independently. As the disease progresses, the person may develop severe memory impairment and lose the ability to perform their daily activities. Worldwide millions of people are affected with dementia. There is no current therapy which cures Alzheimer's disease or alters the process of disease in brain. The current available medications may temporarily improve the symptoms or slow the rate of decline, which maximizes the function of the individual. Researchers have been looking for treatment which slows down the progression of the disorder and recently it has been found that the Antihypertensive drug Nilvadipine, may

A diseased brain cell (middle) has more L-type channels, and consequently more calcium ions inside it, than a healthy brain cell (left). Treating the diseased cells with a blocker of the L-type channel reduced the number of calcium ions able to flow into the cell (right)

have a positive effect on the cerebral blood flow of patients with Alzheimer's disease. Nilvadipine is a calcium channel blocker that causes relaxation of blood vessels and lowers the blood pressure which is used to treat hypertension. Nilvadipine used to treat Hypertension, reduces amyloid production, increases regional cerebral blood flow, and anti-inflammatory

and anti-tau activity which could have a disease-modifying effects of Alzheimer disease. A study was conducted on 44 participants for 6 months who were randomly given a nilvadipine or a placebo. They measured the blood flow to specific areas of the brain, using an MRI technique and, the findings showed that there was a 20% increase in blood flow to the hippocampus, the brain area was linked to memory learning, among the group who took nilvadipine in comparison to the placebo group. The treatment did not have any effects on the blood flow to other regions on the brain. Nilvadipine at a dose of 8 mg found no overall effect on slowing the rate of cognitive behavior in a population of mild to moderate Alzheimer disease.

**REGULATORY NEWS
TRANEXAMIC ACID**

OFLAXACIN

Risk of Stevens Johnson Syndrome (SJS) / Toxic Epidermal Necrolysis (TEN)

Ofloxacin Risk of Stevens Johnson Syndrome (SJS) / Toxic Epidermal Necrolysis (TEN). The NCC-PvPI, IPC has advised the CDSCO to request that the PIL for ofloxacin is revised to incorporate SJS/

TEN as a clinically significant adverse drug reaction. Ofloxacin is used for the treatment of bacterial infections of the skin, lungs, prostate, or urinary tract. Between July 2011 to July 2018, the NCC-PvPI received 81 ICSRs reporting SJS/TEN with the use of ofloxacin. The cases were reviewed by SRP at the NCC-PvPI, IPC, and a strong causal relationship between ofloxacin and SJS/TEN was found.

Reference: Based on the communication from NCC-PvPI, IPC India (ipc.gov.in)

Risk of seizure/convulsion

Tranexamic acid Risk of seizure/convulsion. The NCC-PvPI, IPC has made a recommendation to incorporate seizure/convulsion as a clinically significant adverse drug reaction into the PIL for tranexamic acid marketed in India. Tranexamic acid is used to prevent or reduce bleeding in certain conditions, such as dental surgery in people with hereditary blood clotting

Effect of TXA

Co-apply Anesthetics

Legend: Glycine Receptor (Gly), Glycine (Gly), TXA (TXA), Anesthetics (Anesthetics)

disorders, cervical surgery, heavy menstrual bleeding, nose bleeds and bleeding inside the eye. Between July 2011 and July 2018, NCC-PvPI received nine ICSRs of seizure/convulsion associated with tranexamic acid use.

Reference : Based on the communication from NCC-PvPI, IPC India (ipc.gov.in)

GLIBENCLAMIDE

Risk of palpitations

Glibenclamide Risk of palpitations. The NCC-PvPI, IPC has advised CDSCO to request the revision of the PIL for glibenclamide to include palpitations as an adverse drug reaction. Glibenclamide is used for the treatment of diabetes mellitus. Between July 2011 and December 2018, NCC-PvPI received 12 ICSRs of glibenclamide associated palpitation. The NCC-PvPI also assessed 103 relevant reports from the WHO global database for reports of adverse events and the literature. A signal was published by the WHO Collaborating Centre for International Drug Monitoring (Uppsala Monitoring Centre, UMC) which identified this reaction as a signal in the Asian population. The cases were reviewed by SRP at the NCC-PvPI, IPC, and a strong causal relationship between glibenclamide and palpitations was suggested. The revision of the PIL was necessary based on the results of the investigation of the currently available evidence.
